1. How to ruin a frequency

Newsgroup: rec.radio.amateur.dx
Date: 2002-01-01 04:24:20 UTC
From: alleycat@nym.alias.net
Message-ID: <URaY7.53$zb.18123@kent.svc.tds.net>
Source record: 15077

Today I was listening on 10 meters and heard a weak signal I thought I recognized. About the time I figured out it was 9U5D, he was spotted on DX Summit. Within a minute of the spot, his signal was obliterated by several amplifiers being allegedly tuned up on his transmit frequency. When I can tune my old TL-922 in a few seconds (into a dummy load, I might add), these lids took over a minute in some cases. Then the whistlers started their tunes. To add to the fun of it all, the people who do not comprehend split operating and the "up-sayers" joined in. A few moments ago I heard A92ZE go QRT on 40 meters due to jammers. I have been back into DXing for less than a year now, but I am beginning to recall why I spent 15 years out of it. I have considered experimenting with posting a non-existent rare DX on the page to see if these jerks show up and start their crap or if they listen to see if there really is a DX there to jam.

I guess this really is the season of good will to your fellow man, unless there is a good DX on the air....

Phil,

You have stumbled on to one of the "benefits" of DX clusters. Those
who can't actually hear the DX still get to "participate" in the fun.

I believe the mind set is that if they can't work the DX then neither
should anyone else.

Interesting idea about posting non-existent DX. I wouldn't know how
to post a spot if my life depended on it, but I guess I could have a
few QSOs with "really really weak DX <wink>" and let someone else make
the posting.

73,

Wes N7WS

Some of DX'ers "of a certain age" (i.e. years of experience on the bands) in my club told me that in the past, they knew people who were listening on a certain band for a rare one or DXpedition to show up, and then quickly spot it on another band, so everyone rushes to the busted spot, and the local DX'ers could work the DX without QRM, tuning...
Pretty desperate measures but effective, although quite immoral...

8. Hi...just starting in this

Newsgroup: rec.radio.amateur.dx
Date: 2002-01-02 14:27:27 UTC
From: "D.A.R.Y.L." <daryl.cd@softhome.net>
Message-ID: <3c330b3d$1@news.ifxnw.cl>
Source record: 15084

I'm starting in radio stuff.

I've heard about an underground antenna to be user with 11-meters band. This kind of antenna is a square formed by two elements but the elements are buried under 60 cm.

Anyone have any kind of information about this?

Truly yours,
Ivan Marinkovic
CHILE

9. Wanted - Euro starter sets

10. Proper method to handle a wrongly posted QSL??

Newsgroup: rec.radio.amateur.dx
Date: 2002-01-02 15:09:47 UTC
From: k7mem@myrealbox.com
Message-ID: <270a577d.0201020709.77d816b0@posting.google.com>
Source record: 15086

During my Christmas break I received a QSL from Japan by direct mail. The envelope included a self addressed air-mail envelope and a nice crisp $1.00 bill for return postage.

This is all very nice except for the fact that I never had a QSO with this person. When I read the QSL info it was for a QSO on November 17 on 6 Meters. I don't have any currently working 6 Meter gear and was not on the air in November (busy doing other things).

My question is: How do you handle this kind of thing? I would like to let this person know that he got the call sign wrong. Should I just mail a message back to him in the provided envelope?

The curious part is that the signal report was 59. How did he get the call wrong with that kind of report?

Is this a common occurance? I'm not a big DXer so I don't know.

Dear Ivan,

Yes, this is quite true. Take two elements from old electric irons
... steam irons are best. Connect the inner conductor of an 11 metre
length of coax to one element and the outer braiding to the other.
Bury both elements at a depth of 60 cm in well-cultivated peaty soil
or compost. Water well and add a liberal amount of natural manure.
Llama manure is best, but donkey manure will do. Connect a President
Lincoln to the other end of the coax. This antenna is da bomb!

This is undoubtedly the best antenna for 11 meters and should be used by all on the 11 meter band and by all those who have brought the 11 meter mentality into our bands.

Martin
I have recieved a few cards for QSO's that I surely have never had.
All I do is put everything I recieved (Including the $1) in another
envelope with a sticky pad on it saying that No QSO or Log Entry exists
for this request and post it back.

BUT, that is how I handle it, others may do differently.

Some stations report getting high SWR readings with this antenna, but have
been able to solve the problem by placing a chair directly over the antenna
so that the standing wave can sit down.

I want to truly thank you for this post. It just saved me a couple
thousand dollars. I was just thinking of getting back into the hobby;
reading the newsgroups to see what's happening, looking at the HF gear
available now vs. 10 years ago, etc. Continuing my DX work would be
the main reason for my returning to amateur radio. I was afraid this
kind of crap would would get worse, with the convenience of the
internet, than it was 10 years ago.

73,
Lou

Hi Martin -- not common - but does happen. With folks using non-standard phonetics - it is understandable. Otherwise wise he made a mistake if it was indeed a 59 contact. I would send it back stating that you do not work 6M. Maybe include a nice stamp for the difference.

I have had these more on CW than phone. AC6ST was sending sloppy code -- hi hi

I had quite a few of these (and still receive similar) from JA's that claim to have worked me from C6 on 40M CW in 1999. All QSO's are on the same 2 days and around 9.00 UTC. I didn't worked 40m from C6 and with a call like mine at that time (M0CIL/C6A) I think it has nothing to do with poor conditions or bad copying.
I just used the SAE to mail their card back with a note explaining what happened (my call was used by a pirated.. 99.9% sure about that).

I feel sorry for these guys because more than half write 'tnx for new one' on their cards.

Bye Maurice

Back in the late 60s and early 70s in was building a home out in the
country and had no equipment on HF. I received a note from the bureau that
I had a stack of cards. Then I started receiving DX cards as well.

All in all I think I had around 40 cards...Some of which I sure could have
used...Some? I'd just moved and could have used them all. Unfortunately, I
couldn't use any. So, I sent a polite note to each explaining I had not
been on the air and we were looking for whoever had been using my call.

In the case where they included an SASE I used that

> My question is: How do you handle this kind of thing? I would like
> to let this person know that he got the call sign wrong. Should I
> just mail a message back to him in the provided envelope?

That should work with a polite note, but check the online call look up
engines such as buckmasters http://www.buck.com/cgi-bin/do_hamcall and see
if they have an e-mail address listed. If they do, it's much faster and
much less expensive.

Weren't you complaining 10 years ago about DX so hard to work due to
the LIDs, appliance operators and amplifiers ruining DX? Sheesh, with
all the new radios and their DSP filters, the high gain antennas and
recent solar cycle peak we need something to make DX be DX. This is
just one more little bump in the road. A challenge to some and a
reason to quit for others.

Happy New Year!

Glenn

No, not me. I got out of the hobby for reasons not related to amateur
radio. I had no problems of the type you mentioned back then. My lowly
100 watt station and wire and vertical antennas had no problem getting
through pile-ups. I was first to hear many DX stations and enjoyed
listening to the pile-ups afterwards.

That antenna will only work with a special wire that luckily I have for sale for $99.95 a foot. Unfortunately, the minimum order quantity is one thousand feet, due to the high wholesale price of wood that it's manufactured from. If you order today, I'll throw in a hundred pound of llama manure for free.

It also works better if you plant your head in the ground as well. It seems that the manure resonates at voice frequencies, thereby giving you more power. It is kind of like turning your stereo up to 11.

Just make a dipole for 11 meters and fold it into a square on the ground,
and
trench it in. You will need a good ground with this sort of antenna. The
best
ground is one located near the rig. Take a five gallon bucket and fill with
salt
water. Connect the rig ground to the bucket. The salt water improves the
conductivity, pure water will not work! Good DX!!

Source record: 15003

Hi Pete,
Sure, I remember that antenna design from an old periodical ("Great Buddy" or something like that. Pretty sure it's no longer published. Anybody got a copy or microfiche?). They called it, "The Dirty Ground Loop". Kinda cool, huh?:) Anyways, it's the square dipole that Pete's talking about. Now, the copper penny that was mentioned earlier won't work any more since pennies aren't made out of copper any more and the new alloy will throw SWR way off:(You really don't need it anyways so long as you don't run an amplifier or overmodulate your radio transceiver (that's a really bad mod anyway and can burn up your radio early). The copper penny at the end was a good trick to deal with antenna "end effects" but wouldn't make a noticeable difference to an 11m radio due to relaxed type acceptance. So, I have to respectfully, yet wholeheartedly, disagree with my esteemed colleague (*Please* don't flame me:) Just my 2cents.
Cordial 73's,
de Drink

I think every has said pretty much the same thing. I have been on both ends,
received a card that was not valid and mailed cards to the wrong person.

I return everything to the sender at my expense, airmail is only 80 cents,
with a note as to why the card was being rejected.

That's how I handle them ....

Lou,
You don't have to play the DX Cluster game if you don't want. If you want to search out the DX before they are spotted on the
cluster, no one is stopping you.
With a few rare exceptions, I don't think the pile-ups are any worse than they were 20-30 years ago. I do think there are a lot
more rare DX stations on these days.

I've had similar problems. I've tried several times to hit Skip (can't remember his callsign off top of my head) down at the south pole. I'll be there patiently trying to get thru the pile up, when BAM here come the dudes with the huge amps booming over everyone. And dad-gum if I then don't have to hear "good to talk to you again" over and over for the next half hour.

Dudes, if you already worked a rare DX, give the rest of us a chance!

73,

Robert / N4IXT

PS Wish me luck, going to test for my Extra Friday night!

Robert, you obviously don't understand the program.

DXCC isn't a group sport. We don't play in teams.

It's an INDIVIDUAL competition. Nobody cares about how many clicks
YOU have.

They only care about how many clicks THEY have.

Explained in detail at http://kh2d.net/junk/dxcc.html

Don't take luck with you for your extra test. Study a little bit
first. Just read the answers in the book, like the rest of us did.

I figured I would start an interesting thread with this topic. I think the heart of the problem has been subtly expressed here. Since when is DXCC a competition? I have always regarded it as an achievement. While I feel no inclination to use my legal limit station to tell the DX to listen for the QRP or 100 watt station, I certainly am not going to use it to prevent him or anyone else from making the contact.

After all, it is supposed to be JUST a hobby.

Make some DX? How does one make DX Peter?

Do you make DX Peter? Out of what?

What is the qualification to be a big time DXer like you Peter? I know I surely could never hope to achieve what you have but I would like to know what the standards are so we observers can identify the REAL DXers like you.

Either EA1YV using the EH prefix for 6m work (
http://utenti.tripod.it/ik8mkk/DXCC6/eh1yv.jpg), or miscopied ES1YV.

>

Well, technically, it's supposed to be a 'service', at least in the
U.S., but that's been debated a million times already. I agree
with you, to me it's always been a 'hobby'.

I think you are a little out of touch with the 'hardcore' element of
our hobby, Phil. Some people take DXCC VERY seriously (me not
included), and view it as a competition, always trying to stay one
click ahead of the other guys. I think the melding of the internet
into the hobby has sped up the pace quite a bit:

People pay to be emailed DX information, daily. Used to get
that monthly newsletter in the mail, now it's the daily email in
the inbox.

Cluster software (client side) can be configured to send email or
call a pager if specified DX is spotted. (I often wondered how many
hundred pagers go BEEP every time somebody spots a bogus P5
on the DX cluster).

There are half a million DX email lists.

Anybody who pays to have DX information emailed to him daily and
carries a pager around wired to a DX cluster seems to be serious
about DX, at least to me anyway. I would venture a guess a lot of
guys would trade their first born for a P5 card......

The last few years I have spent very little time transmitting, and a
lot of time listening. In my opinion, ham radio seems to be losing
it's ability to communcate. I hear two basic things going on when
I listen on HF:

1. DXing. 59 QRZ. Who's next.

2. Conversations between the guys who have known each other
for years and years and years.

Whats MISSING, at least I don't hear much of it, is conversations between people who don't know each other, i.e., station A calls CQ and is answered by station B and the result is a conversation that lasts past the my name is, my QTH is, my antenna is junk.....

Used to be, I could tune around and find guys talking about antennas, or computers, or fishing, or a million other things. Now I only seem to be able to find "59 QRZ What's Your QSL Info" and Vern telling Fred what the doctor said when he went yesterday, for the third time this week.

As sad as it may seem, I find listening to air traffic controllers on HF more interesting than listening to most of what I hear on the ham bands.

The other thing I can't quite figure out is the DX thing seems to be prevelent on both sides of the coin - nobody wants to talk to anybody, they just want to 'work' DX and nobody wants to BE talked to, they just want to 'be' DX. I don't know how many times I've heard somebody call CQ for ten minutes from somewhere very common - like DL (sorry Peter) or W5 and then when he finally gets an answer he comes back with "You're 59. Thanks. QRZ". Huh ? Since when does a W5 rate a pileup ?

And then you hear pileups on stuff you figure that everybody and his brother should have worked and confirmed 55 times if they've been licensed for at least a week........

So my guess is that since we don't seem to be able to communciate with each other anymore, a lot of us look at DXing as the last thing left to do on the HF bands.

I agree with you. Some people are WAY too serious about DXCC. I don't imagine all the fighting, fussing, cussing, etc. that occurs when something like VK0 shows up is being done by hobbyists who are doing it for 'fun'.

Rest assured there are PLENTY of guys left who will call DX in a pileup that they don't need to work or confirm, just to flex their tubes and see how many other guys they can get over top of.

Watch a DX cluster. Seem how many spots have 'WORKED' in the comment field. Spotter WORKED the DX already. He didn't tell everybody else about it when he HEARD the DX, because he didn't want any competition. And he's not telling the rest of us about it AFTER he worked it cuz he wants us to go work it too, he just wants to be sure we know HE worked the DX. Chest Pounding.

Still plenty of blood and guts left in the DXCC program Phil, always was, always will be. Seems like more than ever all the time.....

I don't know what I'm gonna do when I get to the point that I have to go to the doctor 3 times a week, because most of the guys I started ham radio with 25+ years ago have taken down the tower, sold all the

ham junk, and said the hell with it. I guess I'll have to download that AOL Messenger thing and see if I can find somebody to talk to on there :-) Hey Peter, what's your AOL BUDDY NAME ?

73, Jim KH2D

It seems that the US dollar is the world standard currency (sorry Euros) and is universally welcomed, even in countries where the population is busy burning down the US Embassy.

Send the money.

True Jim, but you must remember that
Herbie lives for getting onto ham radio
and generating as much trouble on the
airwaves as possible. His stellar track
record of verbal harassment of the Maritime
Mobile and Intercon Nets for over 15 Years
prove that beyond any doubt whatsoever.

He may have had his wings clipped by
R.H. for now, but he will find a way to
get back on the air if at all possible.
This guy's a ultra right wing pariah
with OCD and up until now, a microphone.
Ham radio is his brand of crack cocaine.

Yes, he is very right-wing and I disagree with almost everything he says, but that's no reason to dump on him for advertising his QTH for amateur radio operations. Whether he has OCD or not is hardly relevant to the discussion, either. He may wear funny-colored socks, for all I know.

Next topic...

If you are talking South Pole there are a "LOT" of repeat contacts as these
guys set up skeds, or some one may get ahold of their friends when the bands
open. That's not to say taht the casual DXer or two don't go for those
repeat contacts...Not sure why, Unless like me their logging computer went
down and they didn't remember working "that particular" call.

63. Buying and selling amateur radio gear via the web

Newsgroup: rec.radio.amateur.dx
Date: 2002-01-05 09:56:40 UTC
From: g3cwi@tesco.net
Message-ID: <b8480e86.0201050156.37904aa4@posting.google.com>
Source record: 15039
Cross-posted to: uk.radio.amateur,alt.ham-radio.hf,rec.radio.amateur.dx,free.uk.amateur-radio

There are lots of places to buy and sell amateur radio equipment on the web these days but the best places get lots of sales. The Amazing Online Flea Market at http://www.qsl.net/g3cwi is just such a place. Today there are well over 150 adverts there for a huge variety of amateur radio gear.

Trade over Christmas was very brisk with some real bargains appearing (an FT1000 Mk5 at a great price was sold within minutes!). Overall several thousand pounds worth of gear changed hands in the Christmas period. The site works by having lots of original content to browse - it's not a commercial site so there is no other sales agenda. It is provided completely free of charge and, unlike many other such sites, I am more than happy to change your adverts after you post them (to reduce prices for example).

Whilst the site handles mainly UK adverts, posts from other countries remain welcome. Before posting, take a moment to review the tips and suggestions page.

Howdy

Does YU1EU QSL direct???

I sent him a card (with SAE & USD$) back in November.
Need to confirm a 6M QSO.
Nothing back so far, and he doesn't reply to e-mails either???

Bill, W4TJ, needs to get his card as well for a new one.

Any help and/or suggestions?

Cheers,
Adam, VK4CP

I feel that labeling amateur radio as a 'Hobby' does us all a disservice.

It is defined as a service in FCC Part 97 [97.1 - Basis and Purpose] (I don't know
how it's defined by other countries regulatory agencies).
Because it's a service, the regulations are designed to set standards and define
a purpose.

If it is defined as a hobby, then regulation would be designed to provide the widest
possible public availability (Something like 'the Family Radio Service or CB) and
our frequency allocations would be considered much less important than commercial
services. In other words, our bands would be more crowded, less disciplined and
there would be fewer of them.

I've noticed over the years the word 'Hobby' has been used more often and the standards
have become more lax. (regulatory and operating).

I suspect that by using the 'Hobby' description we are playing into the hands of those who
see our bands and a resource and marketing opportunity.

|
|I've had similar problems. I've tried several times to hit Skip (can't
|remember his callsign off top of my head) down at the south pole. I'll be
|there patiently trying to get thru the pile up, when BAM here come the dudes
|with the huge amps booming over everyone. And dad-gum if I then don't have
|to hear "good to talk to you again" over and over for the next half hour.
|
|Dudes, if you already worked a rare DX, give the rest of us a chance!
|
|73,
|
| Robert / N4IXT
|
|PS Wish me luck, going to test for my Extra Friday night!

Good Luck.

Now... I guess that until you've worked them, every country is a "rare one."
However, I count 10 different Antarctic stations in my computer log and I only
started using it for day-to-day logging in 1998.

So I will admit to four QSOs with KC4AAA since then. Am I "hogging" them, I
don't think so. If I say, "It's nice to work you again", I could be talking
about this year versus a year ago.

Is this too often?

I have a flash. The FCC has lowered the standards to the point that a total drooler can receive a license. Back in the 'good-old-days' it took some real knowledge of electronics and operating procedures. CW was also a major part of the whole scheme. (don't want to open that debate). Not true today.

It is a hobby now, sorry to say.

There are certainly some challenges to working DX and some that shouldn't be there.The only thing I really HATE is the "police" that hang out on a DX's output freq saying "up stupid" or anything else,no callsighns.I did follow 3 of these guys to another freq once and found that 2 of them thought they were doing this malicious activity on behalf of the "Northern California DX Society" or some such thing.Has radio rudeness become that organized? You're right about the technical standards but not the definition.
According the regulations, it's still a service. Imagine what
the standards would be if it were a hobby.

When the standards for an amateur radio license were very high
it was hardly ever called a hobby. There was real pride in having
a license, even a novice license.

Every reference to ham radio as a hobby, lowers the expectation
of high standards. I sometimes think there are people who prefer
this definition for this very reason.

I wonder why so many of us don't appreciate what a real privilege
being a licensed ham is.

In Egypt an ancient manuscript was found that complained that the youth were out of hand. Today parents still write that youth are out of control. Since day one, DXers complain that the new guys are out of control.

Some things never change -- so as a sage sed "Get over it" -- work DX and enjoy.

OK, I've heard this argument so many times that I have to ask: when a station (usually more than one) is stubbornly calling the DX on the DX's TX frequency instead of "up", just what do you propose should be done about it? Let him tire out and die eventually? Look him up in the callbook, then the white pages, then call him up on the phone and then say "up"? Apply for a visa to his country, then fly over there and tell him in person? QSY and Forget about the DX whose signal is about 120 dB lower than him?

I can't believe that after decades of split operations there are some people who are still clueless about it, but why blame it all on the "police"? What about the folks who just have to tune the amps within 1 kHz of the DX? 'Cause, you know, if you change the frequency for more than 500 Hz, your power drops by at least 5 mW and that's unacceptable.

Last time I listened on 20 meters, there weren't enough hams left to ruin a frequency. At this rate, during the next sunspot cycle peak a pile-up will be more than one person calling a DX station.

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio, FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1273 with a release date of Friday, January 4 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A “V-E team” finds a way to test kids in one of the most remote regions of the country and the FCC again says no to expanding PRB-. These stories are first on Amateur Radio Newsline report number 1273 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO TESTING REACHES WHITE MOUNTAIN ALASKA

Ham radio examinations have finally come to one of the remotest areas of the nation. This, after a team of examiners from the W5YI VEC perform a fly-in examination session in White Mountain Alaska. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

White Mountain is a remote fishing village in the far North-West of Alaska. It’s major claim to fame is that its the next to the last checkpoint for the famed Iditarod dog sled race. And it wanted someone to come in and give ham

radio exams.

The closest big city is Nome. White Mountain is only about sixty miles from Nome but its over some rather treacherous terrain. There are no roads in or out and all supplies to White Mountain have to be delivered by plane or boat.

But White Mountain does ham a ham radio operator for its mayor. He is reindeer farmer Tom Gray KL0CQ. And one of its school board members is Eric Morris KL7HT. Both will tell you that a temperature of minus 40 degrees Fahrenheit and a wind-chill factor of minus 100 degrees is not uncommon in winter. These were the conditions faced by a four member W5YI VEC test team when it chartered a plane and flew in on December 11th to administer exams to four adults and fourteen youngsters who were determined to make ham radio a part of their life.

The trip which cost $800 for the flight alone was sponsored by the Seward Peninsula Amateur Radio Club. Braving the weather were examiners Ramon Gandia AL7X, Michael Nurse KL7UJ, Scott Webber AL7RJ and Thomas Busch NL7H. Al four are from Nome. Most of those to be tested came from the Bearing Strait School District’s only inland school. They had all been studying for their Amateur license as part of a search and rescue course. Neither the applicant or the VE team were disappointed. All eighteen passed the Technician class exam.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Those involved in ham radio testing are keenly aware of the problems faced by remote areas of Alaska. At last July’s VEC Conference in Gettysburg Pennsylvania Jim Wiley KL7CC told the group that many applicants in Alaska are denied n Amateur Radio license exam due to the inaccessibility of their locations or the high cost of travel in that state. (W5YI)

HAM RADIO AND THE LAW: FCC SAYS NO ON PRB-1 EXPANSION REQUEST

Ham radio has lost yet another battle against deed restrictions, but the war is not over yet. At least that’s what the ARRL appears to be saying in a bulletin that describes the latest skirmish with the FCC over this politically volatile issue.

In the latest round, the FCC has affirmed a November 2000 staff-level decision that declined to include privately imposed deed covenants, conditions and restrictions under the limited federal preemption known as PRB-1. That’s the federal government policy requires municipalities to ''reasonably accommodate'' amateur communication in antenna-related zoning and regulation.

The ARRL last year appealed to have the full FCC review the earlier denial. The Commission turned down the League's Application for Review December 18 in a Memorandum Opinion and Order released December 26. As a result, it now looks as if the ARRL will bypass any further dealings on this issue with the FCC and will look for congressional relief instead.

The FCC itself even hinted that Congressional action by the ham community might be a next logical step. Its memorandum, opinion and order of dismissal did note that if Congress were to see fit to enact a statutory directive mandating the expansion of the FCC’s reasonable accommodation policy that the Commission would expeditiously act to fulfill its obligation there under. Translated: If Congress tells the FCC to include deed restrictions under the provisions of PRB-1, it will be more than happy to do so. (ARRL)

HAM RADIO IN SPACE: PROJECT JJ - HE EAGLE HAS LANDED

AMSAT-NA's newest satellite project, known as Project JJ for the past year, now has a new and official name. This, as AMSAT North America President Robin Haighton, VE3FRH, announces that effective January 1, 2002, the satellite will officially be known as 'Eagle'.

The name Eagle was submitted by Bill Allen, W7US, of Tucson, Arizona. It was selected from a list of forty-five names submitted by twenty-nine satellite operators.

For his winning suggestion, W7US will receive a free dinner at the annual AMSAT dinner held during the Dayton Hamvention. We will have more ham radio space related news later on in this weeks Amateur Radio Newsline report. (AMSAT-NA, ANS)

**

BREAK 1

Welcoming in the new year with ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the N7VGS repeater serving the Salt River Star Valley Wyoming and congratulating 13 year old Devin Cassity, on becoming the youngest ham in South West Wyoming. Devin is now KD7PHN.

EMERGENCY PREPAREDNESS: NORTHERN CAL TOWN CHOOSES HAM RADIO

Ham radio started the year with some very positive public exposure in the Los Angeles Times. The January 1st edition featured an in depth article about a Northern California town that will tap into older technology to prepare for future emergencies.

Worried that a disaster will knock out e-mail and cell phones, Los Altos Hills has decided to turn to its local ham radio community and make it the primary back-up to normal disaster preparedness communications. And as you might expect, the hams are more than ready to oblige

The complete story can be read at the Los Angeles Times website. The complex URL is http://www.latimes.com/news/local/la-000000203jan01.story. (Highlighted by ARNewsline™)

**

AMERICA AT WAR: POPCOMM COLUMNISTS SAYS “DONT TURN THE OTHER CHEEK”

Popular Communications writer Eric Force has some strong words that are obviously aimed at the pacifists who oppose the United States military retaliation against Osuma bin Laden and his al-Quida terrorist network. As a response to those he calls the “do-gooders of the world” who promote turning the other cheek, Force says to look, really look at the attack that brought down New York City’s World Trade Center twin towers. He then says that it could have struck a lot closer to them.

Force says and we quote: “Consider that it could have been you, your mom, dad, brother, sister other relative or a close friend in those planes and buildings who were terrorized, murdered and buried in the rubble.” He adds that just thinking about the incomprehensible terror, suffering and losses incurred by innocent human beings a the cowardly hands of international thugs continues to tear at his heart.

Force has dedicated his latest I-Waves column to the sights and sounds of September 11th that are available on the Internet and to the victims of the tragedy. Its a very compelling article. You can find it starting on page 66 of the January edition of Popular Communications Magazine that’s on newsstands right now. (PopComm)

**

AMERICA AT WAR: FEDS TO AID NYC TV STATION REBUILD

New York television stations will be getting federal help rebuilding transmitters that were destroyed in the September 11th terrorist attack on the World Trade Center. A total of ten New York area stations will receive eight point two million to offset the thirty million to forty million dollar price tag for purchasing and
constructing a new transmission facility.

According to the Broadcasting and Cable newsletter, Senator Charles Schumer managed to secure the funding as addition to emergency aid appropriation for victims of the attacks. As previously reported, there is some speculation that the replacement transmitting facility could be a 1500 to 2000 foot high stand-alone tower constructed near the former site of the Twin Towers. (Broadcasting & Cable)

**

ENFORCEMENT: NAL CANCELED

The FCC has canceled a proposed ten thousand dollar fine that it had issued to Jeffrey Alan Pettrey, This, for his apparent violation of Section 301 of the Communications Act involving operation of an unlicensed radio transmitter.

Back on July 30, 2001, the District Director of the Commission's Columbia, Maryland Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Pettrey for the infraction. Pettrey filed a response to the N-A-L on August 7, 2001 accompanied by documentation regarding his

inability to pay the proposed fine. After reviewing Pettrey's response, the FCC conclude that cancellation of the proposed $10,000 forfeiture is warranted based on Pettrey’s inability to pay. (FCC)

**

ENFORCEMENT: FCC CANCELS CONVICTED HAMS LICENSE

The FCC has canceled the Amateur license of Kenneth P. Kelly, WT2FBI, of Greensboro North Carolina after Kelly failed to show up for a re-examination. But at the time of the FCC retest order Kelly was otherwise occupied. He was fighting criminal charges in relation to a jamming case in Ohio. We have this report:

--
On November 30, 2001, Kenneth Kelly, the ex-WT2FBI was sentenced to 5 years probation by the Judge H. J. Bressler in a Butler County Ohio court. He had previously been indicted on a 4 th degree felony charge of disrupting public service by his jamming and talking on the Middletown Ohio police radio system.

At his hearing, Kelly agreed to a plea bargain. He admitted his guilt to a reduced charge attempted disrupting public services. At the time the FCC pulled his ham radio ticket Kelly was being held in the Butler County Ohio Jail pending sentencing.

By way of background, a person later proven to be Kelly was first noticed on the Middletown police radio channel the third week of July 2001. Initially the police dispatch radio system was not recording him but that was soon remedied by city radio technicians. After several days of taping, it was observed that the voice on the police radio was similar to one heard on the local 2 meter Amateur frequencies.

Several members of the Dial Radio Club then assisted police by monitoring and taping Kelly on the 2 meter band. Tapes from 2 meters and from the police were then voice printed the aid of computers to check similarities. Dial club members also tried to direction find and locate the signal both on 2 meters and on the police channel.

Through some luck, detectives working with a metro housing police officer and discovered that Kelly was now living in their jurisdiction. After they interviewed him, they felt that he was the person interfering. As the investigation progressed, he admitted to detectives that he may have accidentally transmitted on their frequency by accident. He claimed that his signal may have been mixing with an FM broadcast station and another ham repeater.

But Police did not believe it was accidental, because he was taped trying to talk directly to the police dispatcher and the cars. Later Kelly did admit his guilt and entered into the plea bargain. Now sentence has been passed by both the local court and the FCC.

For the Amateur Radio Newsline, I’m Burt Hicks, WB6MQV, reporting.

--

When he was finally caught Kelly had a Yaesu VX-5 hand held in his possession that had been modified to transmit out of band. The assistance of the Dial Radio Club members is credited with helping to solve this case.

Note: Information and documents from the case can be obtained from the Butler County Ohio Clerk's office or online at: http://www.butlercountyclerk.org/ Click on Butler County Court Records Search. Then enter Kenneth Kelly. (FCC, Dial ARC, others)

**

ENFORCEMENT: MITNICK TO FIGHT TO KEEP HIS HAM LICENSE

Another ham who appears to be getting ready to do battle with the FCC is former computer hacker turned talk show host Kevin David Mitnick, N6NHG. Amateur Radio Newsline’s Bill Pasternak, WA6ITF has the latest:

--

As reported last week, the FCC is challenging Kevin David Mitnick's request to renew his ham radio license. The agency claims that his criminal background raises a substantial and material question of fact as to whether Mitnick possesses the requisite character qualifications to be and remain a commission licensee.

Now, N6NHG has told the U-K Newspaper the Register: "It's just another example of them trying to harass me. Now I've got to spend money to keep a ham license."

Mitnick insists that he has totally abandoned his former ways. The Register article notes that that he was recently called to testify before Congress on federal computer security matters. Also that he spent two days briefing the U-S Commission on National Security on these issues. Mitnick tells the Register that he cannot understand why the government is now questioning his character.

Mitnick is currently the host of the radio program called The Dark Side of the Internet. It airs in the Los Angeles area from 5 to 7 a.m. Sunday mornings over radio station KFI 640 AM. And in a recent appearance on Coast to Coast A-M hosted by Art Bell, W6OBB, Mitnick said that he is hoping for a career in computer security once his term of supervised release from prison has been completed.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The complete Register story and interview with Mitnick is on the web at a rather long and complex U-R-L. You will find it at http://www.theregister.co.uk/content/55/23494.html (Adapted from the Register)

HAM RADIO BUSINESS: AMATEUR RADIO TRADER CEASES PUBLICATION

Ham radio Internet auction sites may be responsible for a twice a month ham radio equipment sales magazine going away. This, after Amateur Radio Trader magazine announces that it has ceased publication.

According to Editor Barbara Patterson, KF4MMV, the Amateur Radio Trader was no longer a viable product. She says that the firm will be redirecting its resources into other areas.

Meantime, the company has also pulled its amateuradiotrader.com website off line. But unlike other publications which have gone under, in this case subscribers are being reimbursed for any outstanding issues. In addition to handling buy and sell ads, Amateur Radio Trader also donated page space to advertising the annual Newsline Young Ham of the Year award. (ARNewsline™)

**

HAM RADIO HERITAGE: MAKING WCC A PART OF THE FUTURE

A ham is campaigning to preserve part of radios past and have it become a part of the future. This as Lewis Masson, K1LJ-S, says that the town of Chatham Massachusetts should convert the site of radio station WCC into an Amateur Radio station along with a training curriculum to teach the kids in the area about communications technology.

WCC is one of the original Marconi Marine Radio Stations. Masson is an ex-marine telex operator at WCC. The site was recently turned over to the town of Chatham and Masson believes it is important to preserve the operations building as an operating amateur radio station and keep the hotel building as a museum to preserve and display memorabilia.

Masson says over the Internet that he has formed a committee to work on this project and that they are looking for nationwide support for this campaign. If preserving the past as an investment in the future is of interest to you, please contact K1LJS by e-mail to lemasson@juno.com. (Internet)

SPECIAL EVENTS: HAM RADIO UNIVERSITY 2002

A reminder the third annual Ham Radio University event takes place on January 20, 2002. Location is the Babylon Long Island New York Town Hall Annex with the doors opening at 9 a-m Eastern time.

Ham Radio University is a day of education about Amateur Radio. This there will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced Amateur Radio operator. The focus will be "hands on" with many demonstrations. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

For more information about Ham Radio University, please contact its Chairman Phil Lewis N2MUN by e-mail to n2mun@optonline.net. You can also get in touch with ARRL New York and Long Island Section Manager, George Tranos N2GA by e-mail to n2ga@arrl.org. Also check the Ham Radio University website for a full list of forums, directions and talk-in information. Its in cyberspace at www.arrlhudson.org/nli/hru2002.htm (N2DO)

HAM RADIO RECORDS: BEST OF THE WEST AND VHF CONTEST HONOR ROLLS

Tim Marek, K7XC, says that he has updated W6 / W7 & "Best In The West" VHF Contest Honor Rolls. They are now available at the following web sites.

http://k7xc.tripod.com/VHF_Records/index.html s the stand alone records page. http://k7xc.tripod.com/K7XCweaksignal/ is where individual links can be found to each contest. (VHF Reflector)

**

HAM RADIO SCIENCE: NEW 6 METER PROPAGATION BEACON IN WASHINGTON STATE

Rich Ewing, KO7N reports over the VHF Reflector that Bruce Shurtz, W7BAS, has installed a propagation beacon in gridsquare CN87TG near Kennmore Washington. It operates on 50.069 MHz putting out 10 watts to a 5 element yagi pointing 90 degrees. The beacon is operational 24 hours a day, seven days a week. QSN reports go to W7BAS, at his callbook address. (VHF Reflector)

**

HAM RADIO IN SPACE: VERY FEW LAUNCHES

Peter Guezlow, DB2OS, reported that 2001 has turned out to be the slowest year for space launches in nearly 40 years. Ham radio or otherwise. According to DB2OS, only 58 flights reached orbit, and there was one complete failure.

Guezlow says that historians note that we must look back to 1963 to find a year that produced fewer launches. He says that in 2000 there were 82 launches to orbit plus three failures. By contrast the most productive year was 1984 when 129 launches delivered payloads into orbit.

But there is at least one bright note. Russia successfully placed five satellites into orbit recently after launching them aboard a Zenit rocket. The cargo rocket, carrying three Russian, one Moroccan and one Pakistani satellite, took off from the Baikonur space center in Kazakhstan. (AMSAT, ANS)

DX

In DX, word that the recently postponed Ducie Island Dxpedition is on again for March. Ducie Island became a DXCC entity last November and it immediately jumped to the top of the most wanted contact list. But rough seas scuttle the first attempt to put it on the air. (RSGB)

Meantime 6 meters continues to be the V-H-F D-X band of choice. On Monday December 31st, Kevin Bishop WB8XX, says that he started hearing O-H-1-X-T at 1300 U-T-C on a backscatter path. From then on until 1620 U-T-C he worked 8 new countries and over thirty new grids in Europe and Asia. (VHF Reflector)

**

STRANGE TECHNOLOGY: ARE CELLPHONES KILLING GHOSTS?

Now, from radio communications to the effect of radio communications on supernatural communications. This, as a British expert who has spent years researching the occult says that cellular and other mobile phones are killing off ghosts. Don Wilbanks KC5MFA has the details:

--

No, we are not kidding you. In fact, Tony Cornell, of the Society for Psychical Research, has told the London Sunday Express that reports of ghost

sightings started to decline when mobile phones were introduced 15 years ago.

According to Cornell, ghost sightings had remained consistent for centuries. In fact, until three years ago the society received one or two new ghost sighting reports every week. But with the introduction of mobile phones 15 years ago, ghost sightings began to decline to the point where they are not receiving any.

And why are there no longer any ghosts being observed? Apparently paranormal events, which many scientists attribute to unusual electrical activity, my be drowned out by the electronic noise produced by cellular telephones and text messaging pager transmitters. And according to the newspaper, the lack of ghost sightings could adversely impact on the nations economy. It says that haunted tourist attractions in Britain could be under threat if the number of cellphones continues to grow from the present figure of about 39 million now in use in the U-K.

Don Wilbanks, KC5MFA.

--

And all of this begs that one question be asked. If ghosts are the spirits of the dead, how can anything actually kill them? (Science Today)

Send his call and "59" and often they will go away happy. I've never done it, but I giggled the first time I heard someone do it, and it seems such an appropriate reward. I've heard it done on CW as well, where Lids, while fewer, are still found.

|Society" or some such thing.Has radio rudeness become that organized? AB7RS

I don't have a clue about the "organization" you refer to, so I'm not defending them.

Frankly, I haven't ever "policed" a frequency, but I have been told a couple of times that the DX was up (or down) when I called on frequency.

But... this is most often the fault of the DX station for: 1) not regularly announcing where they are listening and 2) not giving their call often enough. These two sins are exacerbated by the too prevalent idea that people will only be calling them because they have seen them "spotted" on some stupid cluster and therefore are fully advised as to their call and listening frequency. (I have even had lesser-DX ask me to spot them on a reflector. Whatever happened to just calling CQ again?)

I can't remember the call (maybe 5W0VK) of a recent QSO where the first-class operator identified every time and sent "UP1." This in no way reduced the QSO rate and eliminated the "policemen" and the "?"s on frequency.

The DX station should be in charge of the situation. He should know what is happening on his transmit frequency and if he is going to go split, he should know what is happening on his proposed split frequency *before* casually announcing "UP 5" or even worse, "UP 5 to 10."

Funny aside to that: While I have heard this a couple of times, rarely has the calleer been folled for the simple fact that the 5nn in CW almost never was zero beat to the DX-station's frequency. Having said that, I did that myself and even was once rewarded with a spot on the cluster where the fool spotted the dx and claimed to have worked him.

Heck, if someone is stupid enough to ignore the countless "up up up" on a frequency, he is asking to be fooled, isn't he?

I suspect a certain amount of on-frequency calling is done intentionally to cause interference. Sometimes the callers and those yelling "up, up" sound suspiciously similar. I have always despised the mentality that is more concerned with what they can prevent others from having/doing than with what they can achieve.

Then you are part of the problem. Become part of the solution. Learn
how to LISTEN.

>But... this is most often the fault of the DX station for: 1) not regularly
>announcing where they are listening and 2) not giving their call often enough.

I don't agree, having been a 'DX station' for quite a few years.
Giving my call sign and announcing where I was listening did not keep
one group of people from calling on my transmit frequency - those who
don't know how to LISTEN, or refuse to take the time to do so.

I found the main reason that people in my pileups couldn't follow
instructions was very simple - they couldn't hear me - because
they were transmitting at the same time I was.......

A smart DX'er doesn't call 'up 5' because the DX station says he's
listening 'up 5', a smart DX'er LISTENS and finds the frequency that
other people are working the DX on, and then calls there.

A smart DX station with a very large pileup says he's listening 'up 5'
when he's really listening 'up 10'. This method immediatly divides the
callers into two groups - the SMART ones who know how to LISTEN,
and the other ones, who don't. Guess which group usually gets to
work the DX..........

>The DX station should be in charge of the situation.

To a certain extent. But giving instructions to people who are not
LISTENING is usually a waste of electricity.

A pileup is a dynamic thing, it's very hard to define static rules for
how to make it work 'best', from either end. What works 'best' at
any given moment in time depends on a lot of variables - how good
the DX station is at handling pileups - how many people are calling -
how strong the average caller is, signal wise - how many people
who are calling know how to LISTEN - how many Radio Police
are 'helping' the DX - how fast propagation is changing.

Much, much easier for a DX station to 'control' a pileup on 20
meters when everyone calling him is over S9 than it is for him to
control a pileup on 160 meters when everyone calling him is
229......

From the other end of the pileup, I can offer a few tips that might help make your overall DXing experience more successful:

1. Resign yourself to the fact that your success rate is NOT going to be 100% - you are NOT going to work EVERY DX station you hear in a pileup, irregarless of how much you have invested in amplifiers and antennas. Use the times you fail as a learning experience which will in turn increase your overall success rate, i.e., spend some time figuring out what's actually going on by LISTENING. Don't get frustrated. Get smart.

2. NEVER call a DX station if you don't know his call. Two reasons. One, you look like a total idiot if you do work him and have to ask, and two, you might spend an hour trying to work some DX you don't need to work because you worked it yesterday. Use the time you have to wait before calling to LISTEN and use it to increase your knowledge of what's actually going on. Apply that knowledge to the next pileup you find.

3. NEVER call a DX station until you are sure you know where he is really listening. Just because he says he's listening 'up five' and

just because a hundred other 'DX'ers' are zero beat 'up five' calling him doesn't mean he's really listening 'up five'. The reason the DX station is working split is twofold - one, to keep the callers off of his transmit frequency so people can hear him, and two, so he can spread out the people calling him. So if he has a lot of people calling him and he knows what he's doing, he won't be listening in the same place very long. Use the time you have to wait before calling to LISTEN and use it to increase your knowledge of what's actually going on. See if you can find the station the DX is actually working NOW. See if the next station he works is on the SAME frequency or if he moved UP or DOWN. Try and understand the pattern he is using - by spending a little time doing that, you will increase your chances ten fold of working him when you do call.

4. Learn and realize that the skills of the DX station are a LARGE factor in your success rate. Sometimes you are going to find a pileup where the operator (DX) is totally lost. He can't get a full call in five minutes of screaming. He gets two letters of one call, but then he can't get the callers to shut up long enuff for him to get the rest of the call. His QSO rate is one or two contacts every three or four minutes. Be smart enuff to realize that unless you have enuff power to the tower to make your signal 40db louder than everybody else who is calling this guy, you probably aren't going to work him. Be smart enuff to realize that there are times when you just shouldn't bother to try.....

5. View DXing as a constant learning experience. Learn new things as you go along. You'll be amazed at how soon you'll be able to find a pileup, figure out who the DX is, and pop back and forth between two VFO's to figure out where he really is listening. Realize that DXing is something you have to work at, it's not a skill that

comes out of the box with the new radio. Realize that in most pileups, a few minutes of LISTENING will save you a lot of minutes of calling.

And most importantly, remember this. DXing is something you do because it's FUN. If it starts to feel like DXing isn't FUN anymore, if you feel the veins in your head swelling up and you feel more frustrated than you do happy while you are sitting in front of the radio, then this is a sign that it might be time for you to take a break. Because if you don't, you might wind up being a QRM'er or a Radio Cop, or a tuner upper - all those guys used to be DX'ers but the frustraion made them change.....

If those methods don't appeal to you, then there is the other school of DXing, well known and usually referred to as the 'WFWL' or Work First Worry Later school of DXing. The WFWL method is rather simple. Find a pileup, park your VFO and start screaming your call. Never mind you look like an idiot when the radio police start yelling UP FIVE MORON, just move up five and scream some more. Never mind you look like an idiot when you have to ask the DX what his call is if he finally hears you - who knows, you might get lucky. He could be a Pee Five. Never mind the DX station thinks you are an idiot when you ask him for QSL info because the last guy he worked asked him the same question. If you want to use this method, you WILL work DX. Sooner or later. Thousands of hams use it every day.....

Sending "UP" doesn't work. There are four types of people calling the DX
on-frequency:

1. Jammers. People who *know* they're transmitting on top of the DX; their
goal is simply to get the rest of us ticked off. Obviously, sending "UP" is
not going to stop them - really, it's just going to egg them on.

2. Those who don't realize they aren't calling up. They think they punched
the "SPLIT" button, or they inadvertently bumped "A=B", or they were trying
to find the DX's receive frequency with the B VFO & happened to spot one of
the other on-frequency callers & didn't realize where they were. They think
the "UP" stations mean someone else.

3. Those who don't know what "UP" means. (don't rule it out... especially
with newbies who may well have never been told that DX sometimes works
split.) They may hear you (and/or the DX) sending "UP" but they have no
idea what to do with that information.

4. Those who know better but forgot to push the SPLIT button. They promptly
realize their error when they hear the DX working a bunch of stations they
can't hear. And they go split quickly, without anybody telling them to.

None of these four types will clear out any faster when you send "UP". All
that happens is you add that much more QRM to the cacophony.

(alternative: Maybe the ARRL should have each division director appoint an
"OUS", "Official UP station". This operator would be responsible for
sending UP for the entire membership of their division. That way, we could
have the benefit of "UP" transmissions without the QRM of dozens of people
doing the same thing...)

Generally good advice, however...

Some DX stations have the bad habit of IDing as infrequently as possible during contests. In that situation (which is *different* from normal everyday DXing, but is still DX) time is important, and sacrificing rate so the DX op can be stingy with his call is not a reasonable option.

This can apply to some degree as well when the band is changing and not in the best of shape. With some operators, one could spend the whole opening waiting for the DX to ID, and by the time one learned the DX call, the propagation would be gone. That actually happened to me with an OX3 station this afternoon on 6 meters - the band died before he ever signed his call. (I only know he was an OX3 because he kept sending his grid...)

Listening carefully won't yield information that was never transmitted<g>.

>3. NEVER call a DX station until you are sure you know where he

This is an excellent point. Unfortunately it is becoming more and more difficult, because of continuous callers. DX station sends "KH2D 5NN", as you frantically try to find KH2D, you hear "K4XYW5A6ZYXVEOH8AAA..." Hint to any lurking continuous callers: if the DX says "KH2D 5NN" and your call is W3AAA, he doesn't mean you! If you call, you're just going to make it take longer for *everyone*, including yourself.

Nothing. Let the DX station handle it. DXing from either end of a
pileup is a learning experience. Getting off the plane on Fantasy
Island doesn't immediatly make anybody a pileup expert. Sooner
or later, maybe, the DX station will figure out that nobody is
responding to him because his transmit frequency is a mess and
then he'll take care of it himself, one way or another. Next week,
or next month, or next year he'll be better at handling pileups.

Think about it this way. If KH2D is dumb enuff to sit on a DX stations
transmit frequency and call and call and call, and he's too dumb
to realize that the DX is working people split, or he's too busy
transmitting to hear the DX say he is working split, what makes
you think that KH2D is going to listen to YOU when he doesn't
even listen to the DX he's trying to work ?

Do you ride around the neighborhood looking for lawns that need
cutting and then bang on the door and tell people to cut the grass ?
I doubt it. If you do, and you drive by my house, just go ahead and
cut mine. Cut First, Worry Later is fine with me :-)

Do we tune around the ham bands and interrupt QSO's by telling
people "That last sentence you spoke was gramatically incorrect" or
"Your signal is pathetically weak at my QTH, you probably need to
improve your antenna system"?

So why do we feel this urge to turn around the ham bands and 'help' DX
stations control pileups ? Is it in the spirit of helpfullness to yell
UP FIVE MORON ? How many Radio Cops do you hear that are NICE
about and it (and LEGAL because they identify who they are) ?

If you REALLY have the urge to HELP (which I seriously doubt most
Radio Cops do) then here's a suggestion on how you can REALLY
help. Call the DX station. And when you work him, tell him this "Your
transmit frequency is a mess, it's full of people calling you, and
it's very difficult to hear you because of the people callling you on
the wrong frequency". If the DX station has a clue, problem will be
solved. At least temporarily, until the next group of WFWL guys
shows up.....

Jim, as much as I agree with your previous tips post, I have to disagree with this. First of all, there's DX and then there's DX. Some of them never learn and never will. I would even venture to say that a part of the bad dxing etiquette is due to the poor practices of some DX stations. For example, if no one never, ever replied to those who call when not called, I don't think we would have that problem. This way it's "well, calling out of turn worked a few times, what the hell, I'll do it all the time". After all, no one ever blacklists the felons, so what do they have to lose?
Second, it is all fine to say "let the DX station handle it", but even the best ops at the DX end have no way of knowing what is going on when the condx are marginal. If the DX is barely perceptible in the noise, he can still run a decent US pile-up while one part of the US is being blocked out by a clueless station. While I agree that screaming "up" doesn't work on deliberate jammers, sometimes it actually helps steer the clueless ones the right way.

> So why do we feel this urge to turn around the ham bands and 'help' DX
> stations control pileups ?

It's not so much to help the DX as it is to help remove the moron who puts out an S9+40 signal over the barely audible DX. Sometimes it works, most of the time it doesn't.

> Is it in the spirit of helpfullness to yell
> UP FIVE MORON ? How many Radio Cops do you hear that are NICE
> about and it (and LEGAL because they identify who they are) ?

Why should they be nice? Hell, if I had an EMP weapon on hand, I'd drive to the moron's house and fire it straight into his coax. Legal or not.

> shows up.........

Well, that's all nice theory, but it doesn't work in practice for the following reasons: on CW it is obviously out of the question, and on SSB, yes, you could tell him that, but if I had a setup which would allow me to break the pile-up (one day...) through the aluminum curtain at will, I'd just work the guy and let the riff-raff duke it out. Which is pretty much what the big guns do, not that I blame them, anyway.

Very true. One of my best friends spends a lot of time on the radio,
and in the years he's been doing it, he hasn't learned squat about
how to manage a pileup. He just doesn't have whatever it takes
to get good at it, and I doubt he ever will. Hearing can be part of
it, I imagine - if you have five experienced DX stations listening to
the same pileup, they all five don't necessarily hear the same thing.

But he's having fun anyway... And he's not asking for any help.

Working the ones that do learn makes you happy. Worrying about
the ones that don't learn makes you frustrated. Your choice.....

Some of the on-freq calls are stupid for different reasons. I have an old TS-520 with an outboard VFO, rarely used. One time I spent 5 minutes calling the DX before I realized I had the VFO switch in the wrong position and was transmitting on the calling frequency. There were lots of "up, up" calls, which I blithely ignored, thinking I *was* up.

I dented the desk with my forehead and sheepishly slunk away from that pileup.

Howdy folks,

for those of you who have been waiting to finally work VP8 South Georgia and VP8 South Shetland, here is some exciting news:

In late January/early February a multi-national Team, part of which has already brought ZL9CI to all of us, will be active from these two rare DXCC-countries. The vessel used to reach these islands will be the "Braveheart", the very ship that has already been the temporary home of the ZL9CI gang. CW enthusiasts will be happy to hear that 9V1YC, K4UEE and EI6FR will be part of the team, among others.

Contrary to the ZL9CI expedition the group will not have a website, online logs or pilot stations and for environmental reasons they will only use lightweight generators, simple antennas and low power.

The "Braveheart" will also be used in the second attempt to activate Ducie Island (VP6) in March this year.

Ignore him,anything else only adds to the problem,after all not everyone hears him.When chasing DX I run very tight filters so theamps don't bother too much and I assume the operators are just inexperienced.You didn't comment on the fact that the "police" don't use calls...they are not inexperienced,they know they are in the wrong and probably wouldn't be doing it if it was right.TG

Write the manager's call (or the station's call via the manager's call)
in the upper right hand corner of the card.

Do add one more reason to calling on the DX frequency - sheer ignorance
of split operations.
On 12/30 P49MR was working a large pileup on 6M SSB and using standard
HF techniques. He was on about 50.189 and saying P49MR 200 to 205. I
think this is the first time I ever worked a station using split on 6
and I bet there were many VHF only OPs who had no idea what was going
on. However, unlike say 14.195, those who directed these folks to use
split were trying to be helpful.

You might want to get a definitive answer from the buro, but generally you complete the card and below the cal write in obvious print "via G0ABC" and it will get there. Be aware that not all managers accept buro cards. Sometimes you just have to send direct and absort the postage costs.

I assumed that with the wealth of information on-line these days,
or (in my case) at the end of the ARRL logbook, nobody had to
ask several thousand people who has the 4T prefix, and that the
poster wanted to know a more accurate location than "Peru".
But I've been wrong many times before...

William --- I have tracked Prefixes for 20+ years and the results are
at URL:
http://ac6v.com/prefixes.htm

It is a big big file - 512 Mbytes (give it time to load) and it includes
Current, Deleted Entities, Old & Changed Prefixes, K calls in the
Pacific after WWII (many of which are no longer used), etc

Any way 4TA-4TZ is Peru.
4T is allotted to Peru as well as OAA-OCZ so a Peruvian call could be
OA, OB, OC as well as 4T
4T is a "secondary call" -- typically used during contests or special
event calls.

Here is a sample of the file

Details of Peruvian calls:
OAA-OCZ Peru (Also See 4T)
...... OA, OB, OC Peru (ITU Zone 12 CQ Zone 10) [lat -12 long -77]
{start 11/15/45}
.... OA1 Lambayeque, Piura, Tumbes
.... OA2 Cajamarca, La Libertad
.... OA3 Ancash, Huanuco
.... OA4 Callao, Junin, Lima, Pasco
.... OA5 Apurimac, Ayacucho, Huancavelica, Ica
.... OA6 Arequipa, Moquegua, Tacna
.... OA7 Cuzco, Madre de Dios, Puno
.... OA8 Loreto, Ucayali
.... OA9 Amazonas, San Martin
.... OA0 Special Event and Club Stations
OA0 Antarctica See Antarctic QSL Page

And note that HM is NORTH KOREA (P5) - probably never heard on the Ham
Bands -- but it could be!!!!!!!

All comments on http://ac6v.com/prefixes.htm welcome!

That was the first time I've heard the technique used on 6 meters, though
it's VERY common on HF. (I noticed someone else - NP2BT? - picked up the
same idea on 6 that day, making it possible for me to work him)

The units are kilohertz - if he was saying "UP 5" he meant he wanted you to
transmit 5KHz higher than he was transmitting.

But I thought P49MR was specifying exactly where he wanted you to call?
(when he said "P49MR 200 to 205", he meant he wanted you to transmit
somewhere between 50.200 and 50.205. If you can find the station he just
worked, you're best off to call just a bit higher in frequency than that
station. Unless you determine by listening that he's tuning the other way.)

The pile on P49MR was pretty big that day. I tried for awhile, then gave up
& promptly found P43GB (may have that call wrong now) just as loud on CW &
much easier to work.

Rod,

Since you mentioned North Korea... let me ask for the group's collective wisdom.

Way back ("Sherman, set the Wayback Machine") in 1969 I worked HM4FA. The call is duly recorded in my old paper log, and I have the confirming QSL card in my hands. The info on the card is very sparse: "Korea", "Zone 25", "Chon" (the guy's name, according to my log), and "Confirming QSO of" date, time, freq, rst, mode. On the front of the card is a US postal service 6 cent stamp (!), a Brooklyn NY postmark, and a brief message from the QSL manager telling me that I had failed to send an SASE, but he sent me a card anyway at his expense (I was a 16 year old high school kid at the time... what did I know about DXing?)

So, given your comment about HM4's... am I holding a North Korea card here?

Ouch!! Well, it would not be the first error in either my CW reception or my log book.

But, thanks for the hint, and I have sent an email off to Doug asking him whether I appear in his log on that day.

An update - I got a speedy reply from Doug (ZP6CW) and although I have worked him recently, I did not work him in February of 2000... so I am still looking for a QSL route to 7P6CW.

This is a very impressive database you have there...

I just wanted to drop you a note re: another prefix for South Africa.

There is also a ZSLnnn callsign, allocated to 'Shortwave Listeners'.
We are full members of the South African Radio League, but are not
permitted to transmit anything. We even have our own contests! In my
case I am doing the exam in May, and should then be ZS6...

Anyway, you should never here this callsign on the air, but I thought
I would mention it for completeness' sake.

Cheers
Sander

: manager telling me that I had failed to send an SASE, but he sent me a card
: anyway at his expense (I was a 16 year old high school kid at the time...
: what did I know about DXing?)

: So, given your comment about HM4's... am I holding a North Korea card here?

Afraid not. I went to the database and looked up "HM" in the
"changed" section. Pre-1982 "HM" calls are now "HL" calls:
Republic of Korea. "HL4" is "North and South Cholla, Kwangju".
If the digit means the same thing for the HM calls back then,
that's the area you were talking to.

Gee, it would have been nice to have a DPRK QSL -- if they were
allowed.

From the east coast there, you should be able to hear a few stations at least
from Europe and the middle east also.
There are several clubs that are only for AM DXing. You could use google.com
and search for their web sites.
One is the IRCA International Radio Club of America.
Its web page is:
http://www.geocities.com/Heartland/5792

The other club is the NRC National Radio Club.

There is also an internet email listserve group called amfmtvdx. Here is the
info for them:
http://mailman.qth.net/mailman/listinfo/amfmtvdx

I didnt see what antenna you are using, but I believe that Sony has the built
in ferrite rod antenna, sometimes it is interesting to turn the radio around.
That way you can null some stations that are interfering and hear what is under
them also.

You have it correct. When he said 200 to 205 he meant 50.200 to
50.205. I guess this shorthand can be confusing if it is new to you.
By the way, these frequencies are a close analog to some typical HF DX
frequencies. For example, on 20M DX very often transmits on 14.195 and
listens from 14.200 to 14.210 (or even higher for BIG pileups). Split
operation makes it much easier for the DX station to remain in control
since he can be heard instead of buried under the pile.
By the way, this is one of the reasons you will see that high end HF
transceivers offer a sub receiver or dual receive or some other
advertising term. On my HF rig I can listen to two frequencies at once.
This allows receiving the DX station while tuning on the second VFO to
listen to the stations calling (and automatically transmit on that
frequency). Alternatively, I can use conventional split but reverse
transmit/receive with a single button push to temporaily listen to the
calling stations. This is a momentary contact switch so it is hard to
inadvertently transmit on the DX. This is not as easy on the typical 6M
rig. On the FT847 you can set up the split but listening in reverse
means pushing the VFO swap button. If you fail to swap back you will
transmit on the wrong frequency.

One old story. Some years ago I was using a HW101 transceiver - no split
capability. A DX station was working split (5 UP). He was quite strong
and I was able to spin the dial back and forth the 5KHz fast enough to
work him. If the split is small enough, you could use the RIT (or XIT
or Clarifier) to accomplish the same result as 2 VFOs.

I have the Kenwood TS-60 which has dual VFO with split capability and
it has a 1.1/2.2 kHz RIT. I would think the VFOs would be better for
this. Conveniently there is a "A=B" button which will cause the second
VFO to jump to the current VFO setting, then you can swap and tune the
distance to the xmit frequency. Finally you swap back and engage the
split. This is similar to how you would setup a FM repeater which
wasn't stored in memory. This is a little different then the Auto
Repeater Shift I am used to on my Yaesu 2m/440 radios, but the
difference is fairly easily learned.

Thanks for the help,

Interesting. I wonder if he was having trouble getting through what he
meant by "up 6" and decided to switch to giving the specific range later?

Yes, it's always in KHz.

Some radios have far more RIT range. (my IC-765 will do 10KHz) Still I
think you're right the VFOs are usually easier to use for that purpose.

Make frequent use of the A/B button to check your transmit frequency.
Especially on 6m, it's possible the DX station doesn't know there's an
existing QSO or two going on in his listen window - you don't want to step
on someone else's QSO while you're listening somewhere else.

Maybe more important, by frequently checking the DX station's listen window
you stand a chance of figuring out what specific frequency his last QSO was
on. You want to call near (but usually not *on*) that frequency.

The answer is simple, you didn't workhim, and you are not in his log!
Bob only takes full calls, and is very very explicit about it.
He is also a world class operator with world class ears, but has this
quirk.

If he said "you're all 59", you are definitely not in his log. Bob has
this thing for FULL calls only and he displays this by responding to
partials just as you describe. It's his way of showing displeasure with
the increasing number of people throwing out partial calls (usually
their last two).

That's the bad news, the good news is Bob's on quite a bit and you'll be
able to work him again. Full call with the mobile suffix usually gets a
response. Bob has great ears for mobiles and QRP'ers

If his ears are proportionally as big as the rest of his head, he
should be able to hear people who aren't even transmitting...

As for the guy who asked the orginal question, you've been
made a fool of. One of the things Bob enjoys most about
amateur radio is making other people look foolish.

But here's what you do now. Spit out your pride, swallow your
self respect and go back with your FULL CALL and get your
click. A new click is worth SO much more than self respect
or pride anyway.....

Hey most of us here welcome any DX related questions no matter how basic
or if it can be found on the internet.

Better than asking a DX station in a pileup and tying em up for 5
minutes. I.E. where is 4T, watta you mean ur operating split? etc. These
are good questions and this is the place to ask.

To those who disagree -- go to rec.radio.amateur.misc and you will
REALLY have something to whine about.

Just my 2/100 th green stamp worth.

OK, here it goes. Pasted from the original message:

I am very new to the code. In fact, I'm still not done studying. But a
thought occurred to me the other day. I have no idea how to connect a
key to any of my radios. At present my most likely candidate is my
Kenwood TS-60. I'm thinking of getting an iambic key so I can try to
learn through usage. What should I get, and how would I connect it.
Most of the keys I've looked at feature bare posts to connect wires.
The TS-60 has a plug for the keyer. So, it appears that I need to make
a cable which would be bare wires at one end and a plug on the other.
Does polarity make a difference?

I think that'll do for a start.

Thanks,

You have to get not only a paddle, but an electronic keyer as well, because
the TS-60 does not have a built-in electronic keyer. Then you connect the
paddle to the keyer as per the keyer manufacturer's specs. The keyer output
has to be connected to the rig using a 3.5 mm mono plug. The tip of the plug
is + and the body of the plug is ground, so yes, polarity matters.
You could get a hand key for starters and then upgrade later. In this case,
the polarity of the connector does not matter.

Much.

However, it's probably best to ensure the side of the key plug that connects
to the chassis of the radio is connected to the frame of the key. It'll
work fine the other way, but if you happen to put the key somewhere where it
touches the radio (or the power supply, or something else grounded), you'll
start sending..

The Kenwoods I have used require a phone plug of the standard or the miniature size. Although I have never heard of any adverse effect of wiring them otherwise, good practice would be to connect the base of the key to the ground side of the radio.

As one said, there are two connections for most radios key line. Hot
and ground.
As he already said, you would want to connect the ground side to the
base of the paddle although it will work either way. For an iambic
keyer, you will have 3 lines from the paddle to the keyer. Right,
left, and ground. This connects to your keyer, and the keyer sends
it's signal to the radio on the normal hot/ground key line. The
polarity of the keyer can make a difference. Some rigs like one way,
some rigs are backwards. If you plug in the keyer and the radio won't
key up with the paddles,but will key if you short the line, reverse
the connections from the keyer to the radio. It should then work. I
use a dual "Y" key line from my keyer that will fit either type rig
polarity. MK

Hi gang,

I have had problems with rf getting into the mic section of the 850 when a KAM/KAM Plus is connected using the 13 pin plug. Kantronics had a fix by installing either a capacitor 1pf or so in the plug. Kenwood also had a fix but it required rig surgery. Anyone know the Kantronics recommended fix. I have been searching all over for it and have not had any luck and I can't seem to find my hand written documentation.

Thanks

Try KH6ND, Mike should know who he is. Mike has been active from some
other islands, but if KH5ND was a valid call, it would be listed in
the FCC database, which it's not, so you probably worked KH6ND.

73, Jim KH2D

175. FS: 1KW HF Power Amplifier 2-30 Mhz, Super Heavy Duty

Newsgroup: rec.radio.amateur.dx
Date: 2002-01-13 13:29:06 UTC
From: s.w.bissell@worldnet.att.net
Message-ID: <3e22bd9b.1434923@netnews.worldnet.att.net>
Source record: 14851

I've got a ITT Mackay, Super Heavy Duty, 1KW H-F model MSR-1020, coast station power amplifier. 100% solid state with the AC Power Supply Model MSR-6212 (220vac) It features complete coverage between 2 and 30Mhz. The amp uses a broadband matching transformer to feed the input signal to 4 identical 250W (highly under-rated) amplifier modules. The amplified signals are then applied to a broadband matching transformer, with it's output switched between 5 band-switch filters providing suppression of the unwanted harmonics. Interconnection cables included. I'm asking $750 for all. I've got pictures for serious inquires only. Please E-mail me directly if you have any questions. Both units total apx. 120lbs. Pick up in Houston, Tx or I can meet half way to S.A. or Big D. . I could box ship and insure it but the buyer would have to pay the shipping from 77088.
Thanks
Steve KC5TFL

] As one said, there are two connections for most radios key line. Hot
] and ground.
] As he already said, you would want to connect the ground side to the
] base of the paddle although it will work either way. For an iambic
] keyer, you will have 3 lines from the paddle to the keyer. Right,
] left, and ground. This connects to your keyer, and the keyer sends
] it's signal to the radio on the normal hot/ground key line. The
] polarity of the keyer can make a difference. Some rigs like one way,
] some rigs are backwards. If you plug in the keyer and the radio won't
] key up with the paddles,but will key if you short the line, reverse
] the connections from the keyer to the radio. It should then work. I
] use a dual "Y" key line from my keyer that will fit either type rig
] polarity. MK

So if I use a straight key I only need to wire it to a plug with polarity unimportant but preferred with the base to ground. If I want to use iambic I will need the paddles and an electronic keyer. Do I have that right?

You certainly can. Fancy (and expensive) antennas aren't very good and don't have any secrets in them, regardless of advertising hype.

A good antenna has to be large and installed in a clear, high place. No shortcuts work.

DX101X -- 266 pages of DX how to info ($19.95) at URL:
http://ac6v.com/DXSAMPLE.htm

A year in the writing.
Extensive inputs and reviews from numerous top DXers/Contesters,
propagation gurus, and antenna experts.
Several reviews in QST, Daily DX, and DX Clubs.
Upcoming reviews in March World Radio and Monitoring times.
Happy customers from every USA State and 20 different countries

Samples and outline are on-line.

Find out how to break the pileup. Numerous tips the pros use.
How to track and work a rare one on the first call.
Find out how to really work split.
How to QSL the tough ones.
Tailoring your audio for maximum punch.
How to use the internet so you are not at the bottom of the DX food
chain.

This is not a brag book on my personal DX exploits, but tried and true
practical DX advice from those who have been there, done that, and
worked them all.

Has anyone else seen the new issue of International Reply Coupons (IRCs) now being sold at Post Offices? They are twice the size of old IRCs, three times the weight, they are bar-coded and - most significantly - they now have an expiry date (Dec 31 2006).

In the UK, they are still being sold at the price of 60p each (less than 1 US$), which compares very favourably with the price of IRCs in most other countries.

If you called Bob using a full callsign, he's got yours. If you called
with a suffix only, you are probably correct--he doesn't have your call
and likely did not even log you. His QSL manager is W8CAL.

I'm not so sure about the "compares favorably with the price of IRCs in other countries" - I bought 100 IRCs last week from my local PO and they were $1.75US/each. Are you suggesting that the US Postal Service is going to drop the price on the new ones?? <ROTFL>

Went to buy some the other day. The guy behind the counter had
a stack of the old ones which after a quick call to head office,
confirmed are still valid. The new ones will probably cause
some confusion world-wide methinks!

No. I am saying that we, in the UK, pay far less than you do for an
IRC! At the price you mention, it would have been cheaper for you to
import them from Britain. They are the equivalent of 94 US cents here.

I plan to get some when I go over to Scotland again the end of Feb for five weeks. I went to get some in Portpatrick on my trip last fall. Portpatrick is a village of 750. The local postie had one [1]!!!!! She had been carrying it on her books for a few years and was glad to get rid of it, HI, HI. In nearby Stranraer, the post office is in the Tesco's and I may try there. Easiest is to have a friend in Glasgow get some and I'll pick them up where I see him.

One problem with getting them from QSL managers who get a lot is that some have no stampings of any kind [i.e., price stamp] or origin stamp.

Walt: I guess the new ones from Europe will be in Euros. Glad I can still use pounds in Scotland and don't have to worry about exchanging them.

Cheers

Ham Radio University 2002/ARRL New York City-Long Island Section Convention

Ham Radio University 2002 for Long Island

North Babylon, New York - On Sunday, January 20, 2002 at 8AM, the doors of the Babylon Town Hall Annex on Phelps Lane will open for the third annual Ham Radio University. Ham Radio University 2002 is a day of education about Amateur Radio.

This year the forums have been expanded and new forums have been added. There will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be "hands on" with many demonstrations.

Come join us at the Babylon Town Hall Annex, Phelps Lane, North Babylon, Long Island, and learn about everything from satellite communications, low power operating using radios as small as a tuna tin, how to put up an emergency antenna, the latest information on advanced digital communications, finding and fixing radio frequency interference problems to purchasing your first station equipment or handi-talkie and a special "Ask the Experts" forum. There will also be a Special Event Station W2V set up and operational on HF. There will live SSTV pictures uploaded to the NLI WWW during the event.

HRU 2002 is sponsored by the Great South Bay ARC and is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

Join us for a day of fun and education for the whole family!
Admission is open to all - donation is $2 per person.
(complimentary refreshments available)

For more information contact:
Phil Lewis N2MUN, Chairman, n2mun@arrl.net or call 631-226-0698
George Tranos N2GA, ARRL NLI Section Manager, n2ga@arrl.org or call 631-286-7562

Those are perfectly valid - the stamps are optional. The only ones
that are invalid are those with the rubber stamp in the bottom right-
hand box. Even then, some postal employees will probably cash them,
hams probably know more about IRCs than your typical postal person.

According to what I found in the UPU texts and on
http://mapage.noos.fr/AndreH1/ , there must be an indication of the
origin, either the printed name of the issuing country, or a postmark.
The price stamp is indeed optional.

Had fun tracking ham radio changes over the years. At URL:
http://ac6v.com/history.htm

Includes such goodies as:
1920 The Radio Amateurs Callbook (RAC, Flying Horse) is published.
International QSL bureaus are establihed.

1945 - onwards - Favorite Radio Catalogs of the day -- every Ham had the
latest copy: Allied Radio, Lafayette,
Burnstein- Applebee, Concord, Newark, World Radio Labs, Gotham Antennas,
Fort Orange Radio, Radio Shack, Olson, Amateur Electronic Supply,
Associated Radio, Digi-Key, Jameco, Poly-Paks, Fair Radio Sales, Dick
Smith Electronics (Australian company), Heathkit, as well as
Eitel-McCollough, Sylvania and RCA tube and design manuals. And the very
first piece of amateur radio related mail that every new ham
received..... a packet of QSL card samples and a catalog from "The
Little Print Shop!"

I bought 3 dozen yesterday, and the guy behind the counter had only the old ones. He checked with his boss, then proceeded to sell them to me - with standard 70-cent postal stamps affixed to them to raise the value to the new $1.75 amount! His round-date stamp went on partially overlapping the 70-cent postal stamps to show that they were sold together.

Pity the DX manager who has to figure out how to deal with 'old' IRC's, new IRCs *and* old ones 'modified' in a kludgy way to act as new ones.

By the way, when did the price change go into effect? I bought several dozen about 4 months ago and they were the old ones at the old price. The postal clerk swore that they had been selling them at $1.75 for almost a year.

========
After reading this thread, I thought it prudent to go to my local post office with my little inventory of 30 old IRCs to exchange them for stamps. I never did this before, as usually any IRCs I get in just go out with my requests for QSLs from foreign stations/managers. Well, my local PO clerk knew nothing about any change, and could not figure out why I wanted to redeem IRCs that were, in many cases, originally issued by USA post offices. Had to explain to him that in amateur radio, they are like a secondary currency and what another US ham sends overseas may come back to another USA ham.

Told me I had to come back tomorrow so he could figure out what it was all about. While he had sold IRCs and knew what they were, he apparently never had anybody come in and ask to redeem one. Also, he knew nothing about old IRCs becoming void or new ones being created. He did know, however, that unstamped ones were not valid.

Another example of a little knowledge being a dangerous thing.
Unstamped ones are valid - the left-hand and central boxes
say "facultative", which I am reliably informed means "optional".

Finding a postal employee here who understands French is tough,
almost as hard as finding one who understands Inglische. I guess
the bottom line is "they may or may not give you cash for valid
or invalid IRCs".

The new ones are no more informative, they are just larger...

Believe all you'll get for them is an $0.80 airmail stamp (which may be all you're looking for)...even though theoretically you paid at least $1.05 for them ($1.75 now I think...). One of the guys at our DX club meeting last night told us this is what happened to him at the Post Office.

I don't think there is any need to take panic measures. Nobody has
said the old type of IRCs will expire. It's only the new ones which
have an expiry date printed on them, and that date is nearly 5 years
away!

Depends on who you ask (at the post office). At our local post office,
IRC's come in two different flavors:

1. U.S. issued.
2. Foreign.

Foreign ones get you a stamp. U.S. issued ones get you 1 cent less
than the face value in stamps, i.e., a $1.05 IRC gets you $1.04 in
stamps. This policy was developed after a long conversation with
the Postmaster and a big book.....

The problem with exchanging IRC's for stamps is probably caused by
the fact that very few ever get exchanged, a large percentage continue
to circulate by being passed around from one place to another.

Wouldn't it be nice if the radio club in Newington gave people
electronically generated CLICKS for DXCC and then nobody would
have to worry about IRC's anymore......

I bought fifty new one's last week, which have not been stamped by the issuing Post Office. In fact, until you mentioned it, I had no idea that they needed stamping.

They do however have 'GB' printed in the box.

Do you mean to tell me I parted with £30 and they are worthless?

More than half of them have been posted abroad already, which leaves me at a distinct disadvantage in getting them back to the issuing PO for a validation stamp.

Does this mean I should return to the practice of sending US Dollar Bills instead?

In <a21qmuhrj1@geraldo.cc.utexas.edu>, oo7@astro.as.utexas.edu (Derek Wills) writes:

When the last increase in price hit, I asked the College Station Post Office crew about the old ones. College Station has an extensive experience with them because of the large collection of foreign students and visitors to the Texas A&M University operations.

Answer from Harry at the PO, "Mike, the old ones are, technically, valid anywhere under Postal Union Convention rules irrespective of what was paid for them. An IRC is an IRC. If we get one handed to us here by you, no matter what, you are going to get the prescribed air mail stamp or postage value for it, irrespective of what was paid for it somewhere else. You can turn them in and get new ones. You'll pay a penalty for that! But why do it? When we run out of the old price ones, we will begin selling the newer ones and there is a procedure for us selling the older ones across the counter with additional evidence of the new rates. But in your case, why bother? The price is going up in the near future! So how many do you want at the old price?"

I took the entire supply of them at that College Station Post Office on the spot at the old price, I've not had anyone since turned off, turn down, nor tell me that any foreign service was unable to give value for them.

There *IS* an argument over what they mean abroad from the USA! Here in the USA, we have only one outbound rate and no step rate for what amounts to First Class Airmail service in Foreign operations. Skip Canada and Mexico over that. There is a cheaper rate here for them, but if you give them an IRC up in Canada, so Harry says, all you get is the postage stamp up there for the USA lower rate! Here, all you would get is the same lower rate stamp for a Canada reply, if you hand in the IRC to respond to a Canadian address from the USA post office. Thus no matter what, if I give them one IRC here, I get the corresponding basic single stamp, for the single lowest weight mail piece, for outbound service from the USA, to wherever. Interestingly, the last increase I worked moved the price up on such a stamp. But it also moved the maximum allowable weight per envelope up as well!

In Foreign Service, so some have told me, there is a step rate for zones of service per minimum unit stamp. Thus, yet, in some places, abroad from the USA, you can't, in theory, get air mail service without more than that first unit stamp you would get! Thus, so told me there at the Post Office back then, you might not get air mail service for the IRC if presented in, for example, some African countries, but you would get the letter posted back to you, even if it didn't go by air!

That could have some interesting consequences from some places! That issue of the old song, "A slow boat to China", comes to mind, but only figuratively as I write this!

But, if the country is following the Postal Union rules, the defacto maximum smallest "first class" letter rate is taken care of, no matter what, when you present the IRC to that country's postal service. So Harry noted to me, "If the country doesn't follow the rules, we can't really do anything about it Mike, so you still need to know if they do or don't do that!"

So, as he suggested, I just keep on mailing the old ones! To date, the cards just keep coming back at about the same success rate as it has always been! So come soon. Some come later. Some come MUCH later. In two cases -- 35 Years -- yes, thirty-five years later here! And some, never come at all!

Merci!

Your postage may vary! Please don't shoot the poster! Grin!

See this explanation below from Derek from another thread on IRCs. I
think the rules are whatever the clerk in a post office says on a
particular day. Mine said they needed the stamp, but I bet if I
brought it somewhere else they would take it.

73 Ray K1XV

Another example of a little knowledge being a dangerous thing.
Unstamped ones are valid - the left-hand and central boxes
say "facultative", which I am reliably informed means "optional".

Finding a postal employee here who understands French is tough,
almost as hard as finding one who understands Inglische. I guess
the bottom line is "they may or may not give you cash for valid
or invalid IRCs".

The new ones are no more informative, they are just larger...

If they have GB printed in the box, then the stamp of origin is
optional, according to the official IPU rules. But not many people
know this ... least of all, Post Office clerks!

I have sent unstamped IRC's abroad. Well nobaody told me. The nice lady in the main post office in Bishop Auckland asked me what I was on about when I asked for some IRC's :-)

Even unstaped ones have got a reply, for me, so I wouldn't worry. If they need stamping the bloke at the other end can always use them to send off himself...

Regards

I am trying to decide on a new logger program. I have been using
the WJ2O Dos program for a number of years (about 12,000 QSO).
DOS is fairly old hat now-a-days.

Don't need or want a super progam that is so complicated that I am
captive to it!! Have looked at several on the Internet and have selected
Win-EQF for final evauation. The trial program seems just right for my
needs. Before I plunge, anything that I should know!!

I would really appreciated any comments you might have about this
software. 73. Donn WY5I

222. stupid beginner dx question...

O.K.. so it's obvious that I've never worked much DX...

What is a QSL Manager? Is it a person who handles all the QSL cards for an active DX station?

What is a QSL bureau? You mail your card to the bureau and then they forward it to the DX station?

Sorry if these questions are so simple they seem silly. I looked on google and couldn't find any answers to these (too) basic questions.

Thanks!

Used Log-Eqf for many years and loved it. Finally went with the new Win-Eqf, the hardest part for me was just learning the new keystrokes. There is one minor problem, printing labels. The driver does not work real great at this point, doesn't space quite right. Talked directly to Tom Dandrea the other day and he said the new print engine should be out soon and it will take care of the problem. Have talked to him in the past and done much by email, he is quick to respond and true to his word. It is a good product with good support. Just my two cents worth.

> What is a QSL Manager? Is it a person who handles all the QSL cards for
> an active DX station?

YES See
http://www.catalina-inter.net/mgauthier/Ham_Radio/Successful%20_QSLing.htm

> What is a QSL bureau? You mail your card to the bureau and then they
> forward it to the DX station? All about QSLing to a manager at URL:

All About Bureaus at URL's
ARRL Incoming Bureaus http://www.arrl.org/qsl/qslin.html
ARRL Outgoing Bureau http://www.arrl.org/qsl/qslout.html
World Wide QSL Bureaus http://www.iaru.org/iaruqsl.html

Since there are about 700,000 Amateurs in the United States and very few in
some countries like
Albania (56 licensed hams) it is required to send postage for the return QSL
card. The same is true of when sending to QSL managers. Postage can be in
the form of the country's stamps, International Reply Coupon(s), or Green
Stamps (US Dollars. For definitions of these terms and usage -- See url:
http://www.ac6v.com/qslmisc.htm

Be aware that each direct QSL card with return postage can be $3 or $4 per
card. So 335 counties X $3 = $1000

So best send the common ones through the ARRL Bureau (burro). You must be an
ARRL member for the outgoing burro but not the incoming burro. Outgoing the
ARRL charges $4.00 for the first
ï¿½ pound of cards or portion thereof?? approximately 75 cards weigh 1/2
pound. n

Thanks to everyone for their constructive replies on this issue. I've since had a few cards sent back without a problem, so it didn't seem to matter.

Yesterday morning I went back to the PO and asked for an explanation from the sub-postmaster, he spent 20 minutes on the telephone to Head Office, and the information was that they still didn't know the answer.

He offered to stamp the rest if I brought them in today just to make sure.

So they don't know!

<spam.sux@die.spammers.com> wrote:

>What is a QSL Manager? Is it a person who handles all the QSL cards for
>an active DX station?

Yes, exactly. Fred is the DX. But Fred is in a remote location and
Fred may not have the time to answer cards or the inclination to do
so. And Fred might also be in a country with poor postal service. So
Fred has a QSL manager, someone who is located in an area
with better postal service and someone who likes to answer cards.

>What is a QSL bureau? You mail your card to the bureau and then they
>forward it to the DX station?

No. I don't know where you are, but if you are in the U.S., you send
your outgoing cards to the ARRL QSL bureau, who in turn bundles
them according to what country they are going to, and sends them
to the bureau in that country, who in turn sorts them and gives them
to the station you worked. Some bureaus work better than others.
Some countries have no active bureau, so sending a card to a
a ham in KH0 will result in your card either being returned or
trashed, as KH0 has no QSL bureau. Don't expect bureau cards to
be answered quickly, a year is a quick return.

>Thanks!

You're welcome. Good luck with your cards.

233. W1 incoming QSL bureau - NOT

Newsgroup: rec.radio.amateur.dx
Date: 2002-01-18 18:13:03 UTC
From: gerheim2@home.com
Message-ID: <8a0a4635.0201181013.24d2c03@posting.google.com>
Source record: 14809

I changed my callsign to K1QN a few years ago. Since then, I haven't received a single card from the W1 incoming bureau. I've sent $ and emails, but nothing seems to break the logjam.

Admittedly, my DXing is sporadic. I'm working haphazardly on a RTTY DXCC, and the last leg (80M) of a 5BDXCC. Kinda slow going. Still, about 20-50 incoming QSL's seem to be missing, compared to "reasonable expectations".

The only reply I've received from the W1 bureau indicated that they don't send cards until the number hits a threshold. I may be below that threshold. Then again, some of the cards will have been in their custody for _years_. I mentioned, in light of my generous financial support, maybe they could just forward whatever they had in my account. No reply.

Does anyone else have experience with this bureau?

Please reply to NOSPAMgerheim2NOSPAM@cox.net, deleting the 8 obviously bogus letters.

-Al, K1QN

HAM RADIO IN SPACE: NEW ANTENNAS INSTALLED ON THE ISS

An American astronaut and a Russian cosmonaut ventured into space on Monday January 14th to move a construction crane and install a new set of ham radio antennas on the International Space Station. Roy Neal, K6DUE, has the details.

--

THERE IT WAS, ON NASA TELEVISION, TWO WHITE SPACE SUITED CHARACTERS, DWARFED BY THE IMMENSITY OF THE INTERNATIONAL SPACE STATION. FOR THE 32ND TIME ASTRONAUTS AND COSMONAUTS WERE OUTSIDE THE HUGE SPACECRAFT TO ASSEMBLE HARDWARE.

THEIR PRIMARY OBJECTIVE WAS TO MOVE A BIG CARGO CRANE FROM ITS TEMPORARY BERTH ON THE UNITED STATES SIDE OF THE ORBITING OUTPOST TO A PERMANENT LOCATION OUTSIDE THE DOCKING COMPARTMENT OF THE RUSSIAN CONTROL MODULE.

THAT ACCOMPLISHED, THEY WENT ON TO UNFURL A HAM RADIO ANTENNA. ASTRONAUT CARL WALTZ, KC5TIE AND COSMONAUT YURI ONUFRIENKO, RK3DUO, DEPLOYED THE RIBBON OF TAPE THAT SOON WILL BE IN USE ON A HAM RADIO STATION IN THE SERVICE MODULE,. WHERE THE CREWS LIVE AND SLEEP. A SECOND STATION HAS BEEN IN SERVICE FOR SOME TIME INSIDE THE SO CALLED FUNCTIONAL CARGO BLOCK, ANOTHER SECTION OF THE I S S.

FRANK BAUER, KA3HDO, THE CHAIRMAN OF ARISS, THE GROUP THAT IS RESPONSIBLE FOR AMATEUR RADIO ON THE SPACE STATION, CONGRATULATED THE INTERNATIONAL TEAM OF LICENSED HAMS FOR THE SUCCESSFUL CONCLUSION TO MONTHS OF HARD WORK.

ON JANUARY 25th ONUFRIENKO IS SCHEDULED TO GO OUTSIDE AGAIN, WITH FLIGHT ENGINEER DAN BURSCH, KD5PNU, TO INSTALL 3 MORE HAM RADIO ANTENNAS OUTSIDE THE MODULE THEY CALL ZVEZDA, THE CREW COMPARTMENT THAT'S THE SIZE OF A PASSENGER BUS HERE ON EARTH.

HAM RADIO IS GROWING RAPIDLY IN SPACE, ALONG WITH THE INTERNATIONAL STATION ON WHICH IT'S INSTALLED.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

The Expedition 4 crew will remain on board the ISS until May. And according to Frank Bauer, KA3HDO, another important task is to bring the automatic packet system back on line. He says that ground technicians are working with the astronauts and cosmonaut on that project and that task will continue as crew time permits. (ARNewsline from information provided by ARISS, NASA.)

**

HAM RADIO RECORDS: 24 GHZ DOWN-UNDER

A new distance record is set on a band where even commercial interests are only now starting to tread. And its a group of Australian hams who have set it. Q-News Graham Kemp, VK4BB, has the details:

--

A new Queensland distance record on 24.048.1 GHz USB was established morning of Tuesday 08 January over a 72.8 Km path. Location 1 was at Wellington Point, with VK3ZQB and VK4ZHL portable. Location 2 was at Caloundra, with VK3XPD and VK5DK portable operating.

Signals strengths up to 5x5 after initial optimization with typical daytime QSB. The visiting team are continuing with local propagation experiments. The challenges of building and operating microwave amateur radio equipment are wonderfully rewarding in many ways!

From Q-News Australia, I’m Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Further experimentation is expected to bring even more record setting contacts in this very microwave ham radio band. (Q-News)

**

RESTRUCTURING: BIG LICENSING SUCCESS IN THE UK

A new slow-code license recently introduced in the United Kingdom is also setting records. This in the area of people flocking to get it. Jeramy Boot, G4NJH, days that the new British Foundation License is on its way to becoming a major success:

--

The Radio Licensing Center reports that, as of the 7th of January, exactly 600 of the new M3 Foundation Licenses had been issued.

In the 'QSO Party' for Foundation Licensees that took place on the 1st of January it is estimated that about 100 M3 stations were active. Many joined the one-minute-past-midnight 80-meter net and many more were heard working DX during the subsequent days.

One person active on the 1st of January was Mike Marsden, M3BQH, who also holds the callsign G8BQH. Mike reports that he worked Alex, UR5EDU, in the Ukraine at

two seconds past midnight, using 10 watts on 40 meters. The report was 59+10dB. After a few hours' sleep M3BQH worked 66 stations on the first day, with only two short CQ calls.

"The pile-up queue was never ending, I even managed to work seven other M3s", Mike said.

Jeramy Boot, G4NJH

--

To put this in perspective. The UK has 57,814 hams so 600 is about 1%. Here in the United States we have close to 625,000 licensees. That’s the equivalent of getting 6250 hams signing up for a new license class here in the USA in only a few short days. (GB2RS)

RADIO REGULATIONS: FCC'S APPROVES DRAFT WRC PROPOSALS

The FCC’s Advisory Committee for the year 2003 World Radiocommunications Conference has approved its preliminary draft proposals. The document has been assigned as D-A-02-101 and deals mainly with satellite and terrestrial allocations in the UHF and microwave bands. Amateur Radio is only briefly mentioned in the area of 890 to 1350 MHz allocations.

The Advisory Committee itself was formed in January of 2001 to assist in the development of United States proposals for WRC 2003. DA-02-101 is based primarily on the committee report. Comments on it are due on it no later than January 28th.

The complete of 55 page text of DA-02-101 is on the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-101A1.txt (FCC)

**

ENFORCEMENT: CLEAN UP THE INTERFERENCE - PLEASE

The FCC has written to an A-M radio station and an electric power provider to help resolve an unusual and long-standing interference situation. One affecting local amateurs in the Cincinnati and Mason Ohio areas. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, brings us up to date:

--

The letter suggests that multiple sources may be involved in this interference case. Also that two that are possibilities are Cinergy Corporation and radio station WLW. Cinergy is the electric company to the affected area and WLW is a Clear Channel Communications owned power-house AM station serving the greater Cincinnati area from a transmitter in Mason.

WLW operates on 700 kHz with 50,000 Watts into a single element diamond shaped half-wave vertical tower. This is only one of two such towers left in the United States, the other belonging to WSM AM in Nashville Tennessee. Both were constructed in the early 1930's by the now defunct Blaw Knox Construction Corporation.

One of the amateurs affected is Bob Reiff, WA8ULW, of Mason. Reiff told the ARRL Letter that while the noise is most noticeable on 160 meters, it's showing up elsewhere. He says that some local hams suspect it is even causing problems even on a two meter repeater.

In its letters, the Commission says that it recognizes this to be an unusual case. It says that the source of the interference could turn out to be something else unexpected. But the Commission adds that it is turning to the radio station and electric utility company and asking for their help in finding the source of the noise plaguing the Mason ham community. It's also asking that both cooperate with the technical experts from the American Radio Relay League in solving the problem.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA.

--

By the way, More information on this very interesting Blaw Knox diamond tower design and the ones installed at both WLW and WSM is available on-line. Simply take your browser to http://www.wsmonline.com/w_homepage/tower/index.html. Its very interesting reading. (FCC, ARRL, Amateur News Weekly)

**

ENFORCEMENT: UNLICENSED OPERATOR TOLD TO EXPLAIN

A former ham that the FCC says may have been on the air without a license has been asked by the agency to provide an explanation. The person posing the questions is FCC chief ham radio rules enforcer Riley Hollingsworth, K4ZDH. And in a recent Rain Enforcement log, Hollingsworth outlined the situation:

--
Hollingsworth: "We requested clarifying information from Brian Bailey, ex-KD5PXQ. His license was set aside by the Wireless Bureau on October 19th. We want to know his exact whereabouts on two specific days in September. Bailey has been in touch with us and is deciding weather to provide the information."
--

According to Hollingsworth, the information that the FCC wants from Bailey relates to allegations of unlicensed operations and malicious interference. (FCC, RAIN)

HELPING HAMS: HAMDIHAMS NEW E-MAIL ADDRESS

This note: The Courage HandiHam System has a new electronic mail address. You can now reach the group at handiham@courage.org. You may also contact its Director Pat Tice directly at wa0tda@arrl.net. (HandiHams)

**

CONVENTIONS: HAMVENTION SAYS BRING YOUR BUS AND LAVE THE PARKING SPOT TO US

Free parking at the HARA Arena for Hamvention? Well, kind of. Its free if you leave your car at home and charter a bus to bring in a pretty large group of people to the event. Amateur News Weekly's Phil Thomas, W8RMJ has the not so complex details:

--

For Amateurs who charter a bust to make the annual journey to Hamvention, the Dayton Hamvention Committee will reserve a parking place for your chartered bus for the entire three days of Hamvention. The reserved parking will be close to the HARA Arena Complex, allowing not only a place to secure your valued purchases, but also a place to rest those weary feet after walking many, many miles of Hamvention. Space is limited for the new charter bus parking area. Pre registration is required. Availability is on a first come, first served basis.

--

For more information on the new on-site charter bus parking offer or to reserve a space, please contact the Dayton Hamvention office. It's open normal business hours Eastern Standard Time at are code (937) 276-6930. You can also fax your request toll free at
1-800-491-4267. (Amateur News Weekly)

**

CONFERENCES: SE VHF SOCIETY IN APRIL

Greg Robinson KB4NVD says over the VHF Reflector that the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27 Th. in Oak Ridge, Tennessee. The conference, hosted by the Southeastern VHF Society, promises to be an interesting and exciting event with presentations from accomplished VHF and up amateur radio enthusiasts from several parts of the country. Registration, program details, hotel and travel information can be found in cyberspace at www.svhfs.org. (SE VHF Society)

**

HAM RADIO EVENTS: KIDS DAY A BIG MID-WEST SUCCESS

The first Kids Day operating event for 2002 was a rousing success in many venues. But in one Mid-West city a bit of coverage on a local T-V station helped to make it even better. Again to Amateur News Weekly and reporter Jack Parker, W8ISH:

--

Kids Day at the Indianapolis Chapter of the American Red Cross got a boost when event coordinator Stece Wendt, KB9RDS, made an appearance on a local TV news program. During the two minute segment. Wendt told viewers that all kids and their parents were welcome to share in the Amateur Radio experience, including an introduction to Morse Code, VHF repeaters and HF:

--
Wendt: “And then we turn around tand take them over to the big radios -- the big base station radios where they can talk -- literally -- around the world.”
--

This is the second year the local Red Cross chapter has shown young people how to tune in the world.

Reporting from Indianapolis Indians for Amateur News Weekly, This is Jack Parker, W8ISH.

--

This is just one of many Kids Day success stories. We will have more in future Amateur Radio Newsline reports. (Amateur News Weekly)

ARNEWSLINE(tm) FINANCIAL UPDATE WITH N6TCQ

It’s time for a report on the financial situation here at Amateur Radio Newsline. With it is our Support Fund Administrator and Corporate Treasurer, Andy Jarema, N6TCQ:

--

It is January of 2002. A brand new year for ham radio. And the beginning of another year for us here at the Amateur Radio Newsline. And as we start off the new year, here are the current finances.

Looking in the new corporate checkbook, the balance shows us at about $700 give or take a few bucks. Not very much when you consider that it takes over a thousand dollars a month to produce these weekly 20 minute Q-S-T’s.

Obviously, Amateur Radio Newsline is going to need your help -- and -- need it quickly to keep it from going away and to keep the news of ham radio coming your way.

We have done all that is possible from our side to keep costs under control. But, some fixed expenses like the telephone and long distance calling are a must have. So are electronic mail and world wide web access. There is the cost of the routine maintenance on the tape machines and editing gear. And in a few months the Newsline sponsored Young Ham of the Year Award will be rolling our way. All of this adds up and some costs just keep going up. When you add it all up and average it out, it comes to that $1000 a month figure I just mentioned.

So now is the time when Amateur Radio Newsline has to ask to ask that you help to keep its newscasts coming your way. Your tax deductible contributions can be sent to the Newsline Support Fund, Post Office Box 660937, Arcadia California. The Zipcode is 91066.

Ill be back within the next few weeks with an update on how things are going. For now from the Amateur Radio Newsline support center, I'm Andy Jarema, N6-Tiny-California-Quake.

--

Don't worry if you missed the address. It will be repeated in a few minutes at the end of this weeks newscast. (ARNewsline(tm) Support Fund)

**

ARNEWSLINE(tm): WE ARE GOING MP3

One other piece of news concerning Amateur Radio Newsline. As of March 1st, we will be dropping Real Audio and going exclusively MP3. Why the change? Well ever since we began posting a downloadable MP3 file at our own FTP site along side the Real Audio file, 9 out of 10 people have chosen the MP3. And with good reason. MP3 simply sounds a lot better than Real Audio to most of you. And by dropping the Real Audio, we can make the MP3 sound even better by encoding at a higher bit rate.

Right now, you can still compare the two formats if you like. Until February 22nd we will continue to post both Real Audio and MP3. Take the time to download both. And don't worry. Most modern media players including Real Audio, Microsoft Media and Winamp play MP3 so the chances are that you are already equipped to cover of the digital format change. (ARNewsline(tm))

**

SCIENCE AND TECHNOLOGY: THE NOISE OF EARTH

According to Space Daily, researchers have known for three decades that the Earth is a potent radio transmitter, but they were never able to pinpoint where the noise was coming from. Recently, by using data from the four spacecraft of the European Space Agency's Cluster mission, NASA-funded scientists have precisely located the source of the radio noise along the magnetic field lines. The noise originates several thousand miles above bright regions in the Earth's
northern lights. (AMSAT, Space Daily)

**

INTERNATIONAL-CANADA: ARE AGREEMENT IN B.C.

Turning to international news, Radio Amateurs of Canada which sponsors that nation's Amateur Radio Emergency Service has signed a Letter Of Understanding and the British Columbia Provincial Emergency Radio Communication Service. The letter represents the collaboration between Radio Amateurs of Canada's British Columbia Section Manager Fred Orsetti VE7IO and Supervisor of Information and Communications Technology for the Provincial Emergency Program Andrew Bryan VE7KSN, to provide a cooperative plan to carry out emergency communication. The letter also further enhances the work of the Canadian ARES program and compliments the Memorandum of Understanding signed May of 1994 between Radio Amateurs of Canada and Red Cross. (RAC)

**

INTERNATIONAL - CANADA: VE1AWA RESIGNS AS MARITIME PROVENCES SM

Due to personal reason Roy MacIntosh, VE1AWA has stepped down from the position of Section Manager for the Maritimes. Tom Caithness, VE1GTC has been appointed acting Section Manager pending outcome of the upcoming election call. (RAC)

**

INTERNATIONAL - UK: AMSAT-UK COLLOQUIUM

The 17th AMSAT-UK Colloquium will be held at Surrey University in Guildford from the 26th to 28th of July this year. AMSAT-UK is now inviting speakers to submit papers about amateur radio space and associated activities for this event and for the Proceedings document. Offers of papers should be submitted as soon as possible and should be sent only to Richard Limebear, G3RWL. His e-mail goes to g3rwl@amsat.org. (AMSAT-UK)

**

HAM RADIO IN SPACE: WEBSITE UPDATE

AMSAT reports that IK8XLD has updated his website with information about satellite operations, EME, the ham radio operation on the International Space Station, ATV and homebrew equipment. You can visit Rocco's website at www.qsl.net/ik8xld. (ANS)

**

DX

In DX, DJ4KW and DK9GG are active from Belize as V31YN and V31GW respectively until about the 2nd of February. Activity is on CW, RTTY and PSK 31. (GB2RS)

And KE1F will be active on 10 to 160 meters CW, SSB and perhaps RTTY as ZF2LM from Grand Cayman Island from the 14th to 30th of January. (GB2RS)

Also R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28 MHz with 100 watts to an R6000 vertical. For all three, QSL as directed on the air. (OPDX)

Last but by no means least, word that JX7DFA, is on a job assignment to Jan Mayen. He is operating as LA7DFA. QSL via his home call. He will reply when he returns home in the Spring. (Modern DX)

**

THAT FINAL ITEM: A CALL FOR ARDF HUNTERS FOR THE WORLD GAMES

And finally this week, 2002 may be the biggest year yet for fans of hidden transmitter hunts, especially the ones that are all on foot. Amateur Radio Newsline’s Joe Moell K0OV helps coordinate happenings like these and has news of two major events.
--

Every two years, hams from around the world gather to see who is best at on-foot hidden transmitter hunting, also called foxtailing, radio-orienteering and ARDF. There are separate events on eighty meters and two meters, each with five transmitters scattered in a forest that can encompass 1000 acres or more.

Competitors are divided into five categories for males and four categories for females. Each country may have up to three persons per category on its team.

Back in Y2K, the championships were in China, with a dozen stateside hams among the competitors from 26 countries. This year, the excitement moves to Slovakia and takes place from September 2 through 7. Once again, ARDF Team USA will be there.

Would you like to be on that team? If so, contact me right away, because USA must submit its Letter of Intent to the Slovakian hosts by the end of January.

Of course you'll need lots of practice beforehand, and you can get plenty by attending USA's own national ARDF championships, which will be April 19-21 in Pine Mountain, Georgia, near Atlanta.

Find out about both championships -- Slovakia and Pine Mountain -- by visiting my Web site: www.homingin.com. Homingin is one word. Then apply for the Team USA roster at my e-mail address on that site, or by postal mail to my callbook address.

Maybe you'll bring home a medal this year. From southern California, where this year's local radio-orienteering training sessions will begin soon, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

In case you missed it, Joe’s website is www.homingin.com. “homeingin” is one word. (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More

information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating season for the Dayton Hamvention Radio Amateur of the Year, Technical Achievement and Special Achievement Awards closes January 31st. Nominations should be sent to Post Office Box 964 Dayton Ohio 45401. They can also be filed using the e-form at the Hamvention website. Its at www.hamvention.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm _____ saying welcome to the year 2002, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Ham Radio University 2002/ARRL New York City-Long Island Section Convention

North Babylon, New York - On Sunday, January 20, 2002 at 8AM, the doors of the Babylon Town Hall Annex on Phelps Lane will open for the third annual Ham Radio University. Ham Radio University 2002 is a day of education about Amateur Radio.

This year the forums have been expanded and new forums have been added. There will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be "hands on" with many demonstrations.

Come join us at the Babylon Town Hall Annex, Phelps Lane, North Babylon, Long Island, and learn about everything from satellite communications, low power operating using radios as small as a tuna tin, how to put up an emergency antenna, the latest information on advanced digital communications, finding and fixing radio frequency interference problems to purchasing your first station equipment or handi-talkie and a special "Ask the Experts" forum. There will also be a Special Event Station W2V set up and operational on HF. There will live SSTV pictures uploaded to the NLI WWW during the event.

TALK-IN W2GSB/r 146.685 -600 110.9 PL

HRU 2002 is sponsored by the Great South Bay ARC and is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

Join us for a day of fun and education for the whole family!
Admission is open to all - donation is $2 per person.
(complimentary refreshments available)

For more information contact:
Phil Lewis N2MUN, Chairman, n2mun@arrl.net or call 631-226-0698
George Tranos N2GA, ARRL NLI Section Manager, n2ga@arrl.org or call 631-286-7562

Don't feel alone... I sent money to the 6th area bureau in San Diego 10 months ago this week.... So far not even an acknowledgment of the receipt of my money, and the last update for the "N" section of the information is March of 2001 (just before I sent my $$ I suppose)..... Guess maybe the "sorter" is a silent key, and nobody found out yet!

Maybe I have some cards there and maybe not.... but how should I know, it doesn't even say I have an account....

GOING TO CONTINUE GOING DIRECT... Sure, it costs more, but I get more action from Europe, Asia, Africa... etc.. than I do from my own bureau just a couple of miles away!!

Good luck and 73

Anybody have any suggestions on how to get direct QSL's from Russia and Kaliningrad? I've been trying for both stations I have worked and QSL managers and have yet to have any success.

I have more cards from KC1XX than from any other station. He seems to
QSL 100% for every QSO, on every band, in every contest.

So much waste paper.

The Russiam bureau seems to be working quite well nowadays, albeit
slowly. I received 3 UA2 cards in the last batch from the bureau.
Just be patient. Very patient! :-)

I like Logger a lot. It takes a while to get acquainted with but is extremely flexible. I was faced with typing in my paper logs also. Finally decided not to even look at them and just started typing in the received QSL cards. Next I typed in the QSL's sent for new countries worked out of the log books and only from that point on do I keep it current with all QSO's. Made 50 years of QSL's manageable.

I suggest to use logger, it's free and works very well. I stopped using paper log, and have all statistics online.

You can also easily import contest log from almost all contest programs, by using adif format..

I have tried several logging programs.....in my opinion for general ease of simply logging a qso and for DX use one can't go wrong with .... DXBase 2002

http://www.dxbase.com DXBase Homepage

The program does it all including custom design and printing of qsl cards and labels both. I have run it since v.2000 and it has not once crashed or done anything unexpected. The support is first rate including personal telephone support. IMHO it is "The Cadillac" of all logging programs.

I also have a downloadable screenshot of my DXBase 2002 setup on the Software Downloads Page of my web site which is listed below. Once there you can also search the site for DXBase An informational demo is also available on my site for download....

Hello all.

I have started out looking for awards and contesting, but I have a problem that some experienced operator could help me with.

When I check all my old DX QSO's I notice that a lot of them do not have on their QSL card's the IOTA number eg. A35RK although there is 'TONGA' on the card it doesn't tell me what IOTA it is.

Can I enter the IOTA myself on the card or does it have to be returned for the other operator to fill in himself.

I would really appreciate any direction for the above.
Jim.

I've been using Excel for this stuff for years. Admittedly it has NO bells and whistles, so announcements, and such, but then I don't need them to know what I've worked and what I need. Files transfer between Windoze and Mac without a hitch.

Oh, Derek, do not do that. It will attract other lids behaving the same way.
If one seems to get rewarded by not obeying the rules, why should others
feel obliged to obey them ? After all, it will take weeks for them to find
out that they got their dose of happiness without getting into the log.

Per the IOTA rules, the IOTA number does not have to be on the card.
The Island name is required, however (printed or stamped, not
hand-written).

There are five IOTA groups which are part of Tonga. You need the IOTA
directory to figure out to which group an island belongs.

Bet differently: Some older six meters rigs simply do not have the capability of working split. Like my vintage TS-600. I can possibly do plus/minus 5 kHz with the RIT, but no more than that. There is quite a bit of vintage stuff out there, that has no dual VFOs.

What is the problem?

The selling price has gone up ... and it did so a year ago. But even IRCs bought several years ago are still good. Those things DO NOT come with an expiry date !!!

> By the way, when did the price change go into effect? I bought several dozen
> about 4 months ago and they were the old ones at the old price. The postal
> clerk swore that they had been selling them at $1.75 for almost a year.

That clerk got it right. In January 2001, the price went from 1.05 $ to 1.75$. For European stations, a dollar note is cheaper and suffices. Not for airmail, but it covers sea mail ... and often that "economy" rate mail seems to be shipped by air, too (I have no other explanation for some "economique" envelopes arriving on the 3rd day after the date on the cancellation mark -- and that happened quite a few times).

278. What would improve the VP9THU operation?

Newsgroup: rec.radio.amateur.dx
Date: 2002-01-21 22:41:04 UTC
From: Robert Lyons <boblyons@umich.edu>
Message-ID: <3C4C9901.B55C2EB0@umich.edu>
Source record: 14755

I'm curious - perhaps some old DXpedition hands can answer this:

I've seen a lot of complaints about the nasty pileups around the VP8THU operations, the number of lids, etc. Is there something they should be doing to control the pileups better? or is it something intrinsic to this operation - perhaps the rarity - that's causing the problems?

So far I've had even a chance at that dxpedition. It may be my rig here - no WARC bands, antenna doesn't get me DX on 80 or 40, and my cw is hopeless in a big pileup. Still, what I've heard, the pileup covers waaaay more bandwidth than, say, the Clipperton pileups of a couple years ago, and seem to be much more stocked with rude ops than it should be.

What gives? How could the ops control it better?

Bob, KI8AB

Bob,
That's like asking: Suppose I threw a pile of money out in the street.
How can I control the people to pick it up in an orderly fashion?

I think the ops have done a fine job. In instances where the pileups
got huge, they listened elsewhere. For example, there have been times
on 20 CW where they were listening up at 14070 (unannounced).

They key is listening before you smit. I worked them several times in
the last few days with one or two calls (before the amp warmed up),
after listening for 10-15 minutes to determine where they were
listening.

Not a cost-effective one for buro cards.
For guys with managers, I use WF5E. For buro cards, I usually send
once a year to ARRL. DL and JA I sometimes send direct to their buros,
as it's cheaper than using ARRL when you have several pounds-worth for
an individual country.

I think they are doing a terrible job of controlling the pileups. They ask for Whiskey 8 and the whole world keeps yelling. It is chaos. They should crack down, make an example of a couple of these lids and get control. Then they wouldn't need to take up half the band to make a few QSOs. This is no fun it is just childish.

First, I guess I should confess that I am a DX'er, and have been one of the guys shouting, sending code, and typing RTTY trying to make contacts. Also, I have never been on a DXpedition, so I have no idea what it's like being on the receiving end of one of these operations. Regardless, I am not without my editorial opinion ;-)

I agree that the pileups have been horrendous, and the bandwidth that they have consumed has been greater than I recall. One of the other hams who responded said that at times the VP8 would "listen outside the zone" and answer stations calling from more distant frequencies. The other ham sounded as if he thought that was a good idea, but IMHO, that only increases the consumed bandwidth and angers those hams who are not DXers (increasing the possibility of jammers, tuner-uppers, and lids on the frequs). If I were not a DXer, but just wanted to do some rag-chewing, work my regular sked, or join my regular roundtable, I would probably be very unhappy about the disruptions on the bands. And this isn't like a contest where "I'll just operate on the WARC bands until this thing is over" - it's everywhere.

I think there are two things that a DXpedition can do to limit 1) the frustration of the non-DXer trying to avoid them and 2) they frustration of the DXer trying to work them.

1. Announce the zone where you are listening, and stick to it. Hams who don't want to be QRM'ed will know where they need to go to avoid you; hams who want to work you will know where they need to transmit to be heard. Make the announcement regularly - the VP8s say "up" or "listening up" with every completed QSO -- perhaps on every 10th completion they should say "listening up 5 to 20". Keep the zone a reasonable amount of bandwidth.

2. Limit the size of the audience calling you. I have not heard the VP8 request a zone, continent, country, or calling prefix number. So, the entire globe is calling all at the same time. This makes for a lot of frustrated hams who have been calling for days but stand little chance of getting through, and also increases the bandwidth of the zone required (or consumed) by the calling stations.

Yes, I certainly agree that the pileups have been worse than I remember, and the amount of jamming, lids, QRM'ers, foul language, "helper" stations more than ever. I suspect that these disruptive stations include folks from both groups: frustrated hams who cannot work the DX so they interfere; and angry hams whose bands have been usurped by an activity that they consider (a the very least) unimportant.

I dunno, Barry. I suspect you worked them on a band or mode I can't touch. As I said, no WARCs, no decent antenna for 40 or 80. On CW, I passed my 20 wopm code test, but my working speed is more like 18 wpm, and I've never been able to figure out a big cw pileup - too fast, too many signals. So that leaves me with 10, 15 and 20 SSB. I've listened for several half-hour stretches and haven't heard a useful gap in which to transmit. The prop from VP8 has been terrible (at least for my dipole) - never better than 5-3, usually not even that. My 100W signal would *never* be heard in that massive pileup. Frustrated.

To often people expect to throw their call into a pileup and WHAMMO the get
a call back. It takes a little finesse to work a huge pileup.

When working a big pileup, CW speed has nothing to do with getting the
contact. Usually neither does the antenna size. It is all in how one
listens. Understanding the pileup and where the DX station is listening.
How to tune to the right frequency so you can be heard. Believe me, I have
been able to get through on pileups on 40 CW from my car. I presently run a
vertical and 150w, so I don't have a huge station.

I picked up a book called the Complete DXer. It has tips and ideas on how to work pileups. LISTEN LISTEN LISTEN. See if there is pattern to where the DX station listens.

Good luck and see ya in the pileups

I have been running Logger and love the program...though I wish I could make it work with my FT-1000D. It appears that I have an older firmware version.

ANYWAYS...
Anyone know how to covert to cabrillo with Logger?

Thanks!!

Kent, K9EZ

Bob,
It's not propagation, but the fact the VP8 guys were running a setup
similar to yours. I know they were running low power. I don't know
what they had for antennas. BTW, I worked them on all 3 WARCs without
WARC antennas - on 30 I use my 80m sloper, and on 12 and 17 I use my
40m antenna. Loads up, not great, but good enough.
Speaking of low power, that's one technique sometimes used for pileup
control too. The op turns down the power so less guys hear him, so
less guys call (though sometimes it seems many call without hearing
the DX.

Well, I only attempted to make a contact with them in the eleventh hours.

I have a modest station, but usually get the contact with one or two calls.
This was not the case with the VP8. However, I listened, I was patient and I
sent my call at a modest cw rate ...

I worked them on 20m a couple of hours before they pulled the plug. It took
me about 1 hour to make the contact. Persistence and timing are everything.

The most difficult part was the occasional do gooders transmitting on top of
them telling everyone to qsy or calling into question ancestral lineage.
They did more to slow the pace than those who thought the vp8 was simplex.

Which begs a whole new question ... How many major dxpeditions in modern
times have operated simplex?

It doesn't take a rocket scientist to figure out DX station on .003 ...
Hugh pileup on .023 .... hummm DX station must be operating simplex ....
Hell, my wife knows the difference ...

Anyway .... It was interesting, challenging and fun and I am glad to get
them in the books ...

There has been alot of activity from LU1ZA lately. Many operators warned that the QSL manager is not reliable. Some people have been waiting several years, having sent several QSLs with funding (green stamps and IRCs).

Are there any success stories about LU1ZA's QSL manager? Has anyone ever gotten a QSL out of these guys? Lately?

73,
Mike

Sounds like someone is trying to generate some controversy... and has little potential ...here's my 2 cents.

What you are saying is racist.

Telling someone you'll lower the bar for them, is like saying you think their too ignorant to make it in the "real world."

Ham radio is a worldwide hobby. People who are minorities in this country, aren't minorities in other places of the world. Yet they manage to get licensed, often in countries with less educational oportunities than in the US.

What you are describing already exists, it's called CB.

You want to give ham radio a "shot in the arm?" Try setting up a school station. TEACH people to be hams.

>

Hello Bob,

maybe I'm a little bit out of toppic, because I heard VP8THU only once
and recognized that it is one of the best possibilities to get
frustrated...

According to your statement about your CW speed: Do not stop yourself! I
have operated from the "other end of the pile-up" more than 10000 QSO's
in CW only (Last time from OA7 and TG). In some cases it will be an
advantage to operate in low spped within a big pile-up!
If the dx-station heard several callers at the same signal level, almost
the station wich is remarkable slower then the others will be better
recognized! It is not due to the fact that the dx op can not handle
higher speed, but the difference in rhythm makes the point...

I have applied the same strategy in several pile-ups from Germany, and
had success. I'm operating also a simple station with a IC706/IC735 and
a cushcraft R7000 only.

The only think is valid in every case: If you are not a big gun, you
have to have time!

Keep CW running and think similar like me, it was - for sure - not the
last operation from there! HAM radio is a hobby for a life...;-)

Source record: 14781

At KC1XX, we use a program to make sure that everyone gets a QSL for only the FIRST QSO on any given band/mode combination, i.e. 160CW, 80CW, 80SSB, 40 SSB, etc. Maximum of 12 band/modes confirmed. We spent a considerable amount of time and money to make sure that all of the people who have worked us in contests have received confirmation each time they have worked us on a new band/mode. Once a band/mode is confirmed, they will NOT receive another confirmation for that same band/mode.

We printed almost 34,000 QSLs in the summer of 2000. I expect we'll send out another 10,000 or so in the summer of 2002.

Please see our web page at http://www.kc1xx.com There is a link there to an article I wrote for CQ Contest! Magazine about the QSLing process.

Good point - I use that to good effect in fone pileups, too - talk slower
and sometimes it stands out from the pack. I'll have to try it on CW.

What on earth for? It's not as if NH is rare DX, nor does a 5-second
contest exchange constitute a particularly memorable QSO!

And how many of these 34,000 QSLs do you think have ended up in some
QSL bureau's trash can, because the intended recipient just doesn't
collect cards?

>QSL bureau's trash can, because the intended recipient just doesn't
>collect cards?

If I were to venture an educated guess... they receive hundreds, if not
thousands, of incoming PSE QSL cards.

They have three options:

1. Check those cards against the log and verify the QSOs that match. Very
time-consuming, if you make well over 34,000 QSOs a year. (and also likely
to generate unnecessary cards given that some stations will *request*
multiple cards for the same band/mode)

2. Ignore incoming cards - simply do not QSL. Of course, discourteous.
Also, it's rumored (though I don't think conclusively proven) that some DX
stations have begun "boycotting" those W's who refuse to QSL. Not good for
the score.

3. Do what they're doing: QSL preemptively. Quick & easy to do, and
courteous to those who *want* the cards.

I use option 1 in my own station. It's a surprising amount of work, given
the wide variety of ways in which QSLs have the information filled out. And
I don't make anywhere near 34,000 QSOs a year.

I worked 1A0KM in 10.December.1995 and received my card via IK0FVC. But your QSO happened 5 years later. If IK0FVC is still the manager, I suggest you to try it again.

> anyone please tell me where they are located?

May I suggest you get a better Atlas? ;-) Or try the Geonet Name server
at http://164.214.2.59/gns/html/index.html .

Yakutsk, also written Jakutsk, is a fairly big city in Siberia, about at
62 degrees N and 129 degrees 40 minutes E, which should even appear in a
school atlas. The QSO would count for Asiatic Russia.

There is a Zmeinyy Island in the Black Sea, near Odessa, near 45 degrees N
and 30 degrees E. This belongs to the Ukraine.

Transliterations from Russian and Ukrainian to English are always a bit
ambiguous, especially if it comes to i, j, and y which are sometimes used
incorrectly.

> ...

Build the best station money can buy, without the support of
those HAM's, who are not really interested in contests, but are
giving you the QSO's on one or more bands in a contest, you can
not win; NEVER! Believe me, those HAM's, who are logging a few
QSO's in a contest only, will remember the contesters who answer
bureau cards, and those who do not. Those guys, who do not QSL
contest QSO's, do not care about any HAM who is giving them
a QSO: "Give me your points, move away and do not bother me
with your bureau card afterwards". It's the "LPL-Symptom". ;-)

Good luck in QSL-ing!

I have a pretty good recollection that 4K5ZI was operating from an
island in the Black Sea and it counts as Ukraine. The English
translation is "Snake Island".

Yakutsk City is in Asiatic Russia (Siberia). It counts as UA0Q**

>multiple cards for the same band/mode)

It was 100,000 QSOs spread out over about 5 years (we were catching up
on a big backlog). Approximately 66,000 of those QSOs were for unique
band/mode combinations. This resulted in approximately 34,000 paper
cards. Each card could confirm up to 6 QSOs.

The option of checking each card as it comes in is EXTREMELY
time-consuming. In my article on the KC1XX web site is a picture of
some of the cards that Matt receives. I answer my own QSLs by
cross-checking with my log, maybe about 1000 contest QSOs a year.
Multiply that by 30 and you'll see that what we're doing, while it
could be construed as wasteful, is actually the most efficient method,
and almost guarantees success from the DX station point of view.

(HINT TO DXers FOLLOWS:)

Y'know, it would be a lot less time-consuming if the information on QSL
cards was more standardized...

Maybe the biggest hinderance to quick QSLing are cards with the callsign on
one side and the QSO information on the other. A popular German QSL style
has the call in large, bold print right above the QSO information box;
that's a good idea to emulate.

The rest of the information needs to be in one place. A few designs I've
seen spread the QSO information all over the card.

Cards where part of the information is multiple choice (for example, where
there are a bunch of circles for each month & you color one in) are pretty
slow to read. They're OK if *you're* the DX (i.e. you're not likely
to be wanting cards from other high-volume stations) but not so much so if
you aren't.

And please make sure everything's legible! My bad example is from an
Italian station whose callsign was printed as modern art. It looked nice,
but it took half an hour to figure out *who* was asking for my card!

A friend of mine actually collects blank cards ;-) By now his collection is
something close to 150 DXCC countries. Most of these cards have been
collected on ham fairs or DX-meetings.

Yes, he is in the honor roll, bpth in CW and SSB, but I know that he worked
all the countries for *that* ;-)

As a QSL mangler I get a few blank cards in with the written-out ones. I don't know if they are bribes, I just send them back with the DX station's card.

I have probably sent out some blank cards by mistake when I'm answering cards at top speed, and I know that on at least a couple of occasions I've sent the person's card back to him in the SAE provided. And right now I have two cards to send to people with no envelope because I've already mailed back the envelope - who knows what I put inside them!

I think in the case of Bob's one card being returned, the blank card
was probably an accident.

But I used to get a lot of blank cards, included in with one filled
out one that the other guy wanted answered. I'm sure they were
not an accident, they were incentives to answer the one card that
was filled out.......

Depends on the implementation.

I've seen elecronic-QSL implementations in which it was easy to determine
that a QSO was valid - but took several *minutes* to send a reply QSL if
one had a large backlog of unconfirmed "cards". Not very practical.

Anyway, I think people are going to want physical cards for some time to
come. Note that most major DX-peditions send out glossy, folding picture
QSLs. A plain black-on-white card would confirm the rare one.

With those emails, you possibly already have a QSL. Nowhere does it say, it has to be a card. File those emails as "sit-in" QSLs (make sure you print the internet headers with all the routing information as proof of authencity of those emails). And then discard of the "sit-in"s, when the real cards arrive.

I absolutely agree with having the callsign in bold on both sides if a
two-sided QSL. I first noticed this in 1993 when I returned from a trip
to Bermuda where I was KA3TGY/VP9. There was an opening on 10 meters and
it appeared that I was just about the only DX on 10 for a few days, HI.
I think I had QSLs from about 80-85% of my 10 meter contacts. Flipping
one card over to ck the callsign vs the QSO info isn't to bad, BUT, by
the time you've done a few hundred, you start noticing the problem. And
now I'm seeing this as I operate from Scotland; first as MM/W3LEO and
now as MM0LEO. Going over twice a year, I get a lot of cards,
particularly on 12 and 17 meters.

> The rest of the information needs to be in one place. A few designs I've
> seen spread the QSO information all over the card.

A very good format. And U.S. DXers remember: almost all of the world,
other than the U.S., uses the day/month/year format NOT month/day/year.
So, follow that format and also have the words DAY, MONTH, YEAR above
the info box. [A side note: our using the month/day/year format here in
the U.S. is why you keep hearing about the terrorist attack of "9-11"
rather than "11-9"].

> And please make sure everything's legible! My bad example is from an

> but it took half an hour to figure out *who* was asking for my card!

If you are in the process of ordering new QSLs, sit down and look through the cards you've received in the last year or last several months. By looking at them all at once, you will often see design features you like and others that are or can be a real problem. Interesting designs can be fun but are they legible??

Cheers and look forward to seeing you on the air on my next MM0LEO trip the end of February.

Some new stuff has been added at www.ab7sl.com in the past few weeks....

1. Site search - the entire site is now indexed and searchable from the
homepage

2. Arizona Repeaters Page - covering all repeaters statewide
on ALL bands. This added some 20 pages to the site.....

3. Weather Page - shows temps for selected US cities , full weather
conditions
for Prescott,AZ and USA - World weather maps and forecasts...

4. Added a Grand Kids Photos page....they are so cute and adorable!

Just remember, if you want to use it as proof for an award, most of the card checkers won't accept modified cards. If you were to fill it out in different ink / handwriting, it would obviously be modified.

Under those circumstances, probably best to send it back with short note, including the info for your original qso, and take the assumption that he just made a mistake.

If you are keeping it just for your own personal satisfaction, then I wouldn't worry about it, just add a sticky note with the qso info and note about how the card came it. Might make a neat memento for your collection.

DXCC Rules:

2. Written proof (i.e., QSL cards) of two-way communication (contacts) may be submitted directly to ARRL Headquarters for all DXCC credits claimed. Photocopies and electronically transmitted confirmations (including, but not limited to fax, telex and telegram) are not currently acceptable for DXCC purposes.
4. Confirmation data for two-way communications must include the call signs of both stations, the Entity name as shown in the DXCC List, mode, and date, time and band.

An e-mail wouldn't count any more than an e-QSL.

I'm a operator who boycotts those who don't QSL. I've got a list I keep on my desk, right beside my rig. I don't enter contests for a score, but just to pick up new countries, prefixes, IOTAs, or just QSO interesting stations. Mostly I just want to have fun and participate in all the excitement. The CQ WW contests must be the largest competitive events in the world, in terms of the number of participants, and I enjoy being a part of it all. Even though I'm mostly looking for new contacts, I work stations I've worked in previous contests if they've sent me a QSL, just to help boost their score. On multiple bands, too. It's my way of saying thanks and good luck.

I occasionally get letters containing direct QSLs with IRCs and addressed envelopes for DX QSOs which are nothing to do with me. I usually go to the trouble of returning them. However, it may be easier simply to redirect the letter to the appropriate person rather than the sender.

The latest is for V47KP 'via G3OHX'. Any QSL manager for V47KP??

73,
Ian.

You mean, the ARRL believes to be above the law? That could turn out to be
expensive arrogance of the DXCC desk. Since mid-2000 electronic signatures
are legally binding in the USA. I am unaware of the ARRL DXCC desk having
been granted exterritorial status with respect to American law :)

If one radio amateur issues an email confirmation to another on a ham to ham
basis, there is

a) the routing information contained in the internet headers, that cannot
be forged in a way that would escape detection (and which can be checked
by sampling the log of one of the routing nodes)

b) always the possibility of verifying the identity of the amateur and his
email address

c) always the possibility of enquiring about the validity of an internet
confirmation with the issuing radio amateur

If you take the ARRL DXCC rules to the extreme, then you potentially can
forget most of the QSL cards in your collection, which were issued by
QSL-Managers. Ask yourself:

-- How do the managers obtain the information, which they "verify" ?
Most logs are now relayed by email.

-- How do the Managers verify the correctness? They do it the same way,
by which the ARRL can double check into a dubious confirmation received:
By email.

If the ARRL determines, that the communication by electronic means is a weak link in the QSL procedure, then the DXCC desk should act consequent and require QSL-Manager issued QSL cards to contain a statement, that the information used for the issuance of QSL cards had been following traditional ink and paper procedures of communication, and what the safeguards were for insuring the genuity of the data for which a QSL was issued.

As cards issued by QSL-Managers are not rejected by the DXCC desk even when the logs were sent via email, the DXCC desk has absolutely no factual or legal reason for rejecting electronic confirmations that were exchanged via email directly between two hams, if that exchange contains information (which it usually does), which can be used for checking into the genuity: the sender`s email address.

> remedy the effects of past discrimination by some sort of affirmative action
> allowing underrepresented minorities a FAIR OPPORTUNITY to get their tickets.

Does it occur to you, that affirmative action is racial discrimination in a new cloak? The real message in your call for affirmative action in amateur radio is -- without openly saying so -- that black Americans are too stupid to pass the code part of amateur radio exams.

The fact, that you cloak this racial prejudice into politically correct words does not change an iota with your racist views.

> allow equal opportunity.

Making things "easier" for some is exactly the opposite of "equal". Morse code does not know and does not care about the color of skin.

Your proposal is an insult for every ham in this world independent of the color of skin.

> Any THOUGHTFUL replies are welcomed."

Wouldn`t that expectation require, that you possibly should think first?

Siegfried, you are not really suggesting that you think a printed email message constitutes the equivalent of an electronic signature, are you?!?

Email is so easily aliased and spoofed that it is probably the least trustworthy piece of content on the Internet -- and there is no legislation that equates email origin to proof of signature. Give me 10 minutes, and I'll send you an email message that appears to be from the Pope himself... and the ONLY way you'll be able to tell otherwise is to ask him.

Take a look at the HIPAA guidelines, and you will see the most advanced thinking on legally-binding, non-repudiable e-signature -- requiring a secondary authentication mechanism like smart cards or PKI, with traceable certificate authority back to a certified root.

Don't make me laugh by suggesting that the ARRL (or any other organization, for that matter) should accept printed email as proof of anything EXCEPT that you happen to own a printer. "Yes, your honor, I have the evidence right here in this piece of paper that I printed with my Epson dot matrix printer". hah! ;-)

Fact #1: the ARRL alone administers, regulates and writes rules for the DXCC award. DXCC is not a constitutional right and QSLs do not represent a contract between any parties, especially the third party which, in this case, the ARRL would be.

Conclusion: if the ARRL decides to only accept QSO confirmations in the form or pumpkin carvings or genital tattoos, there ain't nothing you, I or an army of lawyers can do, short of creating our own DXCC award.

Fact #2: e-mail does not constitute an electronic signature.

> If you take the ARRL DXCC rules to the extreme, then you potentially can
> forget most of the QSL cards in your collection, which were issued by
> QSL-Managers. Ask yourself:
>
> -- How do the managers obtain the information, which they "verify" ?
> Most logs are now relayed by email.

Irrelevant. The rule clearly asks for "written proof of communication" - it never mentions how this proof is (supposed to be) obtained as long as it's in the written form.

> -- How do the Managers verify the correctness? They do it the same way,
> by which the ARRL can double check into a dubious confirmation received:
> By email.

Irrelevant. Not to mention that managers verify the QSOs against the (e-mailed) list, while you're asking the ARRL to accept a hard copy of an e-mail message in your mailbox. Two entirely different things.

> If the ARRL determines, that the communication by electronic means is a weak
> link in the QSL procedure, then the DXCC desk should act consequent and
> require QSL-Manager issued QSL cards to contain a statement, that the in-
> formation used for the issuance of QSL cards had been following traditional
> ink and paper procedures of communication, and what the safeguards were for
> insuring the genuity of the data for which a QSL was issued.

Feel free to contact your ARRL representative and submit the proposal. I don't agree with you on this, since then anything goes: one could ostensibly call the dx on the

phone, tape the conversation and use this as the "proof" of the QSO. One could record a QSO on the air and use the mp3 recording and the voice fingerprint as proof. One could subpoena the dx to appear in a court proceeding in which the jury would decide whether the QSO was valid, and so on... That's what would happen if one wanted to take the rules to the extreme.

> As cards issued by QSL-Managers are not rejected by the DXCC desk even when
> the logs were sent via email, the DXCC desk has absolutely no factual or
> legal reason for rejecting electronic confirmations that were exchanged via
> email directly between two hams, if that exchange contains information
> (which it usually does), which can be used for checking into the genuity:
> the sender`s email address.

Again, e-mail cannot be considered an electronic confirmation by any stretch of imagination. Even if (or when) the e-QSL format is accepted for DXCC credit, e-mail doesn't even begin to approach the security of electronic signatures featured in e-QSLs.

They are saying on-the-air they will be QRV for 8-10 days from their start date which was 28-Jan-2002. So based on that info they should be on-the-air till 05-Feb to as late as 07-Feb.

Weather conditions can change all that as well as equipment failures (generators,antennas) so it is advised to snag them as soon as one can.

Does the expedition have a home page? It came unexpected although I am grateful for 2 new countries. Are they going any further after S. Georgia? I would suggest 3Y0 (hi, hi).

On eHam Review is a the "Best HF transceivers and makers" at URL:
http://www.eham.net/articles/2958
Interesting reading.

My IMHO comments were:

Well interesting. First there is what people bought -- which has
nothing to do with which is best.
Brand loyality, PRICE, looks, elmer recommendation, succumbing to
full page brag ads, all enter into what people bought.

Next is the best performance. Unless some one takes the various rigs
and has an extensive bench of test equipment -- it becomes
somewhat subjective. Example - take a TS-870 and compare the
performance to an FT-1000D. One of our local test gurus did just this
and the FT-1000D won hands down. QST does extensive testing --
but you have to read it thoroughly (maybe between the lines) and they
do not rank them. There used to be a transceiver rating subscription
service and man did they lay it on the line, unfortunately no longer
published. ON4UN used to list ratings in his older "Low Band DXing"

Next there is what is best for DXers, Contesters, -- Dynamic range,
front end crunchabiltty, selectivity, are of paramount importance here
and I doubt many dedicated DXers or contesters opt for many of the
rigs in the eHam list.

What is best for general all around use and what people bought (sans
rigorous use and relative performance) seems to be what the list
reflected. And few will bad mouth their $1200 purchase!!

I did a similar survey amongst DXers and Contesters and here is what
those folks bought not necessarily "the best" Listed in order of votes.

Yaesu FT-1000MP, FT-1000D, FT-990, FT-1000MP-MKV, FT-920,FT-1000
Kenwood TS-850, TS-940, TS-950's, TS-570D, TS-870, TS-830,TS-440, TS-450

ICOM IC-706 MKII, IC-756PRO, IC-735, IC-751A, IC-706, IC-756,
IC-738, IC-775DSP
Ten-Tec Omni Series - particularly for CW.

Contesters choices are Yaesu FT-1000MP, FT-1000MP, MKV,FT-1000D,
Kenwood TS-850, TS-940,
ICOM IC-756PRO, IC-775DSP, IC-765,
Ten-Tec OMNI VI+
Strongly suspect this group were looking for the best performance for
the buck

What are your (as Dxer;'s) comments -- jump into the fray

Hello Ignacy,
No there is not any homepage for the VP8THU - or - VP8GEO expedition.
They have not announced any further operations on this trip once they
finish up with VP8GEO.

The ratings there don't mean squat. Firstly they are mostly
subjective. Secondly there is a war going on between "certain" children Icom
owners and everyone else. The everyone else group is not stooping to the low
tactics to bring ratings on radios down for the Icoms. If you look at the
ratings for a number of high quality radios from Kenwood and Icom you will
see a number of suspicious zero ratings. Try looking up the callsigns of
some of these reviewers - they do not exist. Too bad the ham radio
commuminty is not above such child like behavior. --- Steve

If it's bigger, then it may help you hear further, thereby increasing range of your radio in a 'technical' kinda way.
What I find interesting is the 'stinger' matching piece on top. I'd bet money that even at 1Kw, it'd become a bright orange piece of flaming metal. 15kw?.. I suppose that's a safe bet, since who's going to try it at that power??...

Seems to be an attractive price for most CB related gear.

Sure I am a fan of a wide bandwidth antenna, but I consider looks as well.
You should have seen the looks I got with the BB3 screwdriver mounted on the
back of my Intrepid! Least I had the sense to paint it to match the car!

I've heard a couple different routes for this one and it's hard to get a word in during the pileup. Is tghe correct route via LU2CN and if so, is there special addressing directions, or does it now go to LU4DXU? Or perhaps a third adress??

Does not look like it...
I saw one of these amps last year...
Although very illegal, I found it very interesting that someone
would go through so much expense to run this kind of power on 11 meters.

The one I saw took the whole rear of an enclosed pickup truck.
Out of curiosity, this guy proudly showed it off, and showed me
his output on a Bird Meter. He was running a Amateur rig on 11 meters
to drive it.

There are people that run that kind of power, although generally not on
a day to day basis.

A standard whip handles 1 KW without getting hot. No idea what would
happen if you fed it with 15 KW.

I wonder what the chrome does for RF skin losses? I also remember someone (W8JI ?) doing an analysis of what is wrong with using a large center mounted
coil.

BWAAAAA-HAAAAA-AAaaaaa!

Riley *WHO*!

The FCC, and Riley can't find their asses with both hands - how in hell can they ever HOPE to find a
blatant CB outlaw, when all they have to go on is a 8 element CB beam in full view up 80 feet or so,
and an amplilier that dims the lights of the entire east coast every time he keys up...

I mean, after all, the FCC and Riley AREN'T magicians ya know... :-(

Pete,
The 'problem' with using a center mounted loading coil are
the resistive losses of the coil (common to any loaded antenna),
and the mechanical problem of mounting the coil. Depending on
the frequency used, you end up 'eating' the resistive losses,
that will happen with ~any~ loaded antenna no matter if it's
base/center/top loaded.
The 'chrome' shouldn't make any appreciable difference to
'skin affect', unless the metal is heated to the point of the
chrome loosing it's contact with the steel core. Of course,
the corona discharge will probably 'chew' the antenna down to
the coil before that happens.
The 15 KW claim is pure 'horse-hocky' (to put it politely),
but there are people stupid enough to do what's necessary to
run that much power mobile. You can tell who they are on the
highway, they're the ones who drive the 20 ton alternator with
wheels on it...
'Doc

I had a friend who was working at a trucker/bd stop in Arizona. He
was putting amps together, mobile and SB200's, and altering the meter
shunts to reflect high power (KW or so). He would set them to run no
more than 30-40 watts. Made a bundle! Selling them for $1000 plus!!

He also made mirror antennas (phased and high gain ...[20dB???]). He
was getting 300+ for those and paying less than 40!

The chrome IS nice. Nice looking. I think that heavy chrome plating resonates in the American psyche with the strength and purity of the 1950's when chrome was thick and cars were heavy and power was POWER. It looks like it could handle 15,000W with chrome to spare. I can just see that baby on a dark night glowing orange and blue blowing out neon lights as it cruises down Main. WOOWEE! HOT DAMN! We're smokin' now!

I think it's worth $150 just for decoration. I'll take two. One for each mirror. That means 30,000 Flaming Watts of ....GREAT BALLS OF FIRE!

Doc, if you supply the alternator, I'll supply the pickup and together we'll make internet history. You drive and I'll take the video.

Tom

There is also the Quantum Loop which is a ferrite rod antenna. McKay Dymek made one of those at one time also. Didnt work too bad.
There is a lot of information about all of these loops and the home brew box loops on the web sites of some AM DXing clubs.
One is the IRCA - International Radio Club of America.
http://www.geocities.com/Heartland/5792

And also the National Radio Club. You can find them probably using google.com search engine.

Lets see ... on a 13.6 volt system that would be approx 2205.88 amps using a 50% efficiency for the final class C power amp. Anyone have a trailer mounted gen set to load up this antenna?

heh heh!!

Man, I'm beating the commercial radio stations are just kicking themselves
about all the money they've spent for 50kw antennas, when they could have
just bought Davemade...

Ah, the perfect antenna for that "nuclear powered CB" walkie-talkie from a couple weeks ago (also on Ebay).

Thanks, but that's not what I was looking for. The address is a military building, and there was some discusssion that it wasn't specific enough, and the mail would just bounce around. In light of other notes I've read indicating that NOBODY has received any confirmations from this operation, I am inquiring about a BETTER address.

Sheesh, I would BUY a few of these and GIVE them to these CBers. What them fry their brains and everything else within a 1 block area.

Can you imagine 50kW into these coils??

I haven't really followed this thread but I must respond here.

There isn't a link to it on my home page but if you look at:

http://users.triconet.org/wesandlinda/w7uvr.jpg

you can see the old QSL card of my former neighbor and Elmer (gave me my Novice and Conditional exams), the late Lee Smith, W7UVR.

This is circa 1958-59 so the equipment dates from that era and was "state-of-the-art."

The vehicle was a 1955 Mercury with a 1956 Lincoln engine and truck springs and tires under the rear. (There was an extra leaf in the spring on the side where the HV power transformer resided)

Initially, the amplifier ran a 4-1000A, high level plate-modulated using push-pull-parallel 813's for modulators. Later it was converted to a linear for SSB.

The small beam on the top of the car could be elevated to a height of 30' using a pneumatic mast (visible in the middle photo inside the car). The beam was later replaced with a three-element tribander that was folded for travel using custom machined tubular hinges.

There were two whip antennas on the rear using motor-tuned edge-wound silver-plated inductors and vacuum variable capacitors. These were housed in the large Plexiglas boxes visible in the top photo. These were of course tunable from the driver's seat.

The generator in the photo is a 5KW Kohler, which was later replaced with a 15KW in a larger trailer. The equipment was also continually upgraded as the state of the art changed. (Even in these photos, the equipment is different)

So, 15KW mobile? I doubt it (corona problems) but not too farfetched if you put your mind and money to it.

I believe this mobile was on the cover of CQ magazine once but I never saw it. At some hamfests of the day they had mobile judging contests. When he pulled in, everyone else went home.

Good one Doc,

Once again your humour shines through. It is unbelievable what length CB'ers will go to in order to outdo the next guy. And whats even worse is the price they pay to do it.

405. Use of SSB on bottom of 40 meters?

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-01 08:45:52 UTC
From: googlyelmo@earthlink.net
Message-ID: <3C5A55B9.294B0B8C@earthlink.net>

I have been noticing quite a number of SSB signals towards the bottom end of 40M over the last several weeks, here in Seattle WA. The voices are mostly Spanish, with an occasional japanese/chinese/korean speaker thrown in. These are definitely hams, not SWBCers. I have spotted them down as low as 7035. Tonight I heard them right on 7040 (the QRP CW freq.!!), and several places from 7050-7065. I know that SSB *is* allowed between 7075-7100 in ITU Region 2 outside of the US, but nowhere can I find reference to any authorization for SSB or other 'wideband' mode use below 7075. What is going on with this? It is making 40 more frustrating than usual. I never heard this BS before this month. I also heard what seemed to be a VK or ZL tonight on 7123 SSB. What gives?

Will, KD7BFX

I have also encountered this problem recently. The main source
appears to be Cuba. I remonstrated with a group of Cuban stations who
were in an SSB net on 7033 kHz one day last week and they informed me
thet "The SSB band in Cuba now starts at 7030 kHz". It seems they are
a law unto themselves, so what can you do?

In Europe and Africa (Region 1), band plans are generally voluntary.
The entire 40m band in Region 1 is only 100 kHz wide (7000 - 7100 kHz)
and the recommended SSB section in this Region is 7040 - 7100 kHz.
The sector 7035 - 7045 is also used by data modes in Region 1,
including RTTY and PSK31. With the proliferation of code-free
licenses for HF operation, the problem of encroachment into the CW
sub-band is bound to get worse.

Much more of a problem than SSB in the CW band is the constant
wide-band jamming which affects the whole of 40m during hours of
darkness. It is believed to be coming from Iran and is targetted at a
station in Iraq which is broadcasting propaganda in Persian. (See ARRL
news.)

Hello,

just checked the Web Site of the IARU for bandplans; but it's still
under construction. ~:-(

For the ITU Region 1 (Europe, Africa, Middle East and the aera of
the former USSR) the bandplan for 40m is:

7000-7100 kHz CW
7035-7045 kHz Digital modes (but no PR in DL)
7040-7100 kHz Phone (i.e. SSB)

That does not answere your question complete, but might be helpful?

Gary,

When and what band did you work LU1ZA? LU4DXU, who is running the lists
this season, is the QSL manager for 12, 17 & RTTY this season. The cards
are
being printed and should be available soon.

There are no sub-bands mandated in the VK licence regulations. In most cases, if you can use a mode anywhere in a band, you can use it everywhere in the band.

The Wireless Institute of Australia (WIA) voluntary bandplan has CW from 7000kHz to 7300kHz and SSB from 7040kHz to 7300kHz, so either way they are within the accepted band allocations for VK-land.

regards,
Mark.

414. How to count VP8CTR?

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-01 15:00:39 UTC
From: Robert Lyons <boblyons@umich.edu>
Message-ID: <3C5AAD96.D8EC03FD@umich.edu>
Source record: 14690

Can anyone tell me how VP8CTR counts with respect to the DXCC list?
At the time of the QSO, Roman was on an Antarctic ice station (see
QRZ record, below). My ARRL DXCC listin shows all the usual possible
VP8 counters (South Shetlands, South Sandwich, etc), but Roman is in
none of the listed locales. How does the call count towards the DXCC
list, then? as just another Argentine station?

VP8CTR (ARGENTINA) Lookups: 112
ROMAN A. BRATCHYK (NOW UT7UA) QSL VIA DL5EBE
WINTER ISLAND, ARGENTINIAN ISLANDS ARCH. ANTARCTICA IOTA AN006
BASE F (ARGENTINIAN ISLANDS) NOW BAS MUSEUM
CHILEAN ANTARCTICA

Thanks for your help - Bob, KI8AB

Probably fishing boats, bootleggers, pleasure boaters or any
number of other things. Common on 75 meters also. With ham
gear being so plentiful and no licence needed to buy it this
type of thing is inevitable. Example: If you look closely at
those older CNN video of Usama Bin Laden using an HT to
talk at his (now destroyed) Al Queda training camps, and photos
of his associates, you will see either Icom or Yaesu ham gear
HT's on their belds or lapels via a carry strap. Nice commercial
for Icom and Yaesu eh...?

418. OT , Maybe. What is Portable ?? What is a "club" ??

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-01 16:15:15 UTC
From: Cathexis@yourhaterols.com
Message-ID: <3c5ab7d2.990644905@news.erols.com>
Source record: 14694

Greetings,

I guess these questions are off-topic, but at least this ng is more on ops. than equip. so I'm posting it here. Hope none are offended

What exactly *is* portable? Of course if I take my rig camping in the Blue Ridge that's portable. If I wire it up to a van that's mobile. But what if I'm in a camper and I throw a line over a tree (while parked , of course); Is that mobile or portable ?? Also, running my rig in my shack (the basement) is fixed. What if I take it out on the porch or backyard ? Still fixed ? Battery-powered QRP rig on the picnic table out back ?

In a similar vein, What constitutes a club ? Okay, sure I'm in a fine club already. But what if I just file papers for the "XYZ" Amateur Radio Club with the FCC -- Will I get a call even if I'm the only member ? If my club's address is a P.O. Box, does that make my QTH/Shack fixed for my call and portable for the club ??

I admit these are not imminently important questions. They're kinda like trivia, I guess. But I do participate in some HF Nets and sometimes it's advantageous to have an extra turn 'cause you've got a club or a portable/club call. Sincerely hope I haven't offended any die-hard club or port. operators out there, just trying to get the genuine 411 on it.

From Part 97 --- FCC Rules
(2) A club station license grant. A club station license grant may be held only by the person who
is the license trustee designated by an officer of the club. The trustee must be a person who holds
an Amateur Extra, Advanced, General, Technician Plus, or Technician operator license grant.
The club must be composed of at least four persons and must have a name, a document of
organization, management, and a primary purpose devoted to amateur service activities consistent
with this part.

(2) For a new club or military recreation station license grant, each applicant must present all
information required by the rules to an amateur radio organization having tax-exempt status under
section 501(c)(3) of the Internal Revenue Code of 1986 that provides voluntary, uncompensated
and unreimbursed services in providing club and military recreation station call signs ("Club
Station Call Sign Administrator") who must submit the information to the FCC in an electronic
batch file. The Club Station Call Sign Administrator may collect the information required by these
rules in any manner of their choosing, including creating their own forms. The Club Station Call
Sign Administrator must retain the applicants information for at least 15 months and make it
available to the FCC upon request. The FCC will issue public announcements listing the qualified
organizations that have completed a pilot autogrant batch filing project and are authorized to
serve as a Club Station Call Sign Administrator.

==========
Just my spin on mobile/portable
Equipment in a vehicle
When you are mobile in motion --- your mobile,
when you are parked your mobile at rest,

In a boat -- maritime mobile
In a plane, balloon, ultralite, hang glider -- aeronautical mobile

Gear not in car
when you are portable away from home -- gear is not in a mobile vehicle -- "on a pickup bench, blanket on the ground" your portable.

Patio operation is at your FCC recognized address so you are at your base station regardless of where at your home it is installed -- you can put it in your bathroom for all anyone is concerned.

The FCC used to be very strict on all this, but many VHFers/Hfers operate mobile and do not so identify. Field day stations don't specify portable etc.

Triva
At one time, an accurate log of all transmissions had to be kept. Mobile and portable operation were allowed, but if a ham wanted to operate away from his fixed station, and would be gone for a period of more than 48 hours, written notice of the mobile/portable operation had to be sent to the FCC. Before 1949, mobile operation was limited to the ham bands above 25 MHz. Mobile and portable stations had to identify themselves on the air as "mobile" or "portable"

Only about 10,000 people so far

>If so, what route worked?

Direct to AA5BT, QTH correct everywhere. SASE gets you a
direct return.

I also do cards for HC8N, and most of my mail is for them, so if
you are sending for 9V1YC, put that call on the outside of the
envelope and I'll get to it faster. HC8N made 40,000 QSOs in
Nov 01 and I still have a lot of cards for that operation to
answer. At the peak I was getting up to 150 envelopes/day and
I have a Real Job as well.

I tend to agree about CB stuff in ham groups - but in THIS case, *I* won the bid on the item, and
intend to incorporate the antenna into some ham mobile antenna experimentation - in fact, I have
arranged to take *2* of them at the bid price of $19.99... How can you beat that price, as compared
to a Hamstick or Hustler that's built MUCH lighter and cheaper?

It was in 1997, but yes, he was on Galindez Island, so Antarctica. For some reason I didn't see (or perhaps misunderstood) that possibile interp for the VP8 prefix. Thanks, Mark!

Get the QSL card and avoid the worry of whether or not the ARRL will
deep-six your e-mail "confirmation"...it can be "spoofed" with any
text editor these days. I'd rather have a QSL card on the wall
instead of some printed out e-mail message.

Rod,

As always, you da man. Big Thx. I would like your response (or others)
to the following if I might be so bold:

Based on my read of your reply, and since you don't need a ticket to
be a club member (we've got a couple in my local club)- just to hold certain
of the official positions-- I could say it would be possible for me to start a
club with myself and three daughters (no hams alas), file the paper work,
give the club a P.O. box address at the local Post Office, and secure a
club call that would be portable at my home QTH. In that way I could then
operate with two calls from the same QTH, 1 fixed and 1 portable. Agree ??

I could even apply for a Special Event Call (aniversary of the club, say)
and then operate with 3 different calls by one operator at one QTH.

I worked the station on 20 Dec on 15 meters. I understood at the time that qsls went to LU2CN which is a naval facility club station, but later heard that it needed to be addressed to a specific person lest it roam the halls for eternity. I sent an email to LU4DXU requesting a clarification but he did not respond. What's the concensus? Send a card to LU4DXU as well and see what happens??

Why not? We have (in VK) 7.0 - 7.3 MHz, and there is no legally-enforceable
band plan either (ie we can operate SSB on 7.003 LSB if we wish).

SSB down to 7.050 is common in contests, although not usually any lower.

To the best of my knowledge, the G.E. Super Radio and C.C.Crane radio are also more or less compatible with the Radio Shack DX-392 (mine) and the Sangean vers. (model# 808 i think) which is identical -- Rat Shack buys re-labelled Sangeans for their radios basically. It's been 2 years since I did my comparison shopping. At that time these 4 were all compatible in performance and price. I chose the DX-392 for its BFO, wider HF coverage, and built-in tape cassette deck that lets me record anything I can hear. (Helpful for code practice when going for my General). And other features.

Unfortunately, you'd be very lucky to find the DX-392 as they were d/c'd at that time. Latest vers. is DX-394, I think which is much smaller and lighter, but lost the features I bought the DX-392 for.

Art Bell and his legion of fans are quick to tout the values of C.C.Crane, but fail to mention it's over-priced, IMHO. Compare the Super Radio which can usually be had for under 100.00US - sometimes much less. I heard tales of them going for 50.00US at clearance sales, etc. Both are said to be fine for what they do. but don't expect to hook one up to your enormous longwire; it would just overload the radio. However, you can and should do a net search for homebrewing AM Loops which are easy to make, work even in your apartment, and really can make a huge difference . Component quality, sensitivity, selectivity, and receptivity are the important qualities to consider. I think the two radios are more or less equaL Your millage may vary.

Bottom line: I would compare prices, including S&H, versus picking up a G.E. Super Radio out at Best Buy or whatever. If there's no real significant diff., then buy the Crane, otherwise go with the G.E. Either way, consider antenna improvements for any DX. You could gain experience with either of these and then save your money for a Drake. Hope this helps.

They don't run 12 volt dc systems. Alternators are capable of AC.

But for 15 KW, assuming about 50% conversion efficiency all down the
line, it would require somewhere between 400 and 500 horsepower to
the alternators.

Most common gensets are not capable of that kind of power output.

Last I checked, a horsepower was just under 750 watts (745.7 to be more precise). At 50% efficiency, 15 kW works out to 40 horsepower on my calculator.

Maybe they're just not makin' horses like they used to?

Derek

Hope you answer buro cards also, because mine came or will come in that way!
One of the QSO's with HC8N was a few days after the CQ WW CW 2001, one of
the ops came back to my CQ on 30m, which was nice, normally it's the other
way round! Guess he was looking for a clean QRG, because a couple of minutes
later, there were HC8N spots on 30m all over the place...
Oh well, hope to get that card via the buro? Will be fun if I find it in my
box at the club...

Please tell me what I'm missing....

What is the difference between working VP8GEO and VP8THU or VP8CTM?

I have those confirmed, but is GEO special because it's South Shetland Is???

Does it make any difference with paper chasing.... i.e. WPX or DXCC?

Thanks,
Dennis - W6NYC

VP8GEO is South Sandwich Island. It is only rarely on-the-air so far
fewer Hams already have it worked / confirmed. It's rarity is what
makes it special.

VP8GEO = So. Georgia Is.
VP8THU = So. Sandwich Is.
VP8CMT = Falkland Is.

Same for WPX, different for DXCC.

There are several stations frequently on South Shetland Is., most
active seems to be CE9/R1ANF.

>>Anyone know what kind of antenna(s) this group has?

Not for sure, but they are simple ones. This was a back-to-basics operation, with simple antennas, no web pages, no on-line logs, no "pilot stations" and in general very little spoon-feeding. We have to work a little harder with these guys.

>>I've yet to hear them on any band at more than Q2, S2. That's with >>an IC-746 and 3 el beam. >>W5ORX

Well, for a start they were much stronger than that on 80m last night! I don't have a beam for 80m, just a wire dipole at the radio club on the campus here at Univ. of Texas. We have an inverted-Vee for 30m and they were great copy. I've only worked them on 7 bands so far - I didn't find them on 12m and I couldn't hear them on 160m last night with a long (random) wire. But on other bands they have been solid copy at the appropriate time.

I don't know where you are located (your call doesn't show on a couple of data bases I checked), but there have been times when they are loud in the NE of the US and undetectable here. But it works the other way round, too, and wherever you are in the world you should have a chance to work this one. They are usually on 3-4 bands at any given time, so turn that big knob in the middle of the radio and don't give up!

Amateur Radio Newsline™ Report 1277 – February 1, 2002

Amateur Radio Newsline report number 1277 with a release date of Friday, February 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The President of the United States speaks to hams in Florida and is ham radio seeing a second Solar Max? These stoies are first on amateur Radio Newsline report number 1277 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: PRESIDENT BUSH COMES TO HAM RADIO

The President of the United States has come to ham radio. Bill Burnett, KT4SB, has the details:

--

President George W. Bush has taken to the ham radio airwaves. This, to thank the Florida Amateur Radio community for being ready to serve the public when it is needed.

The President’s comments were made during a stopover the morning of January 31st at the Volusia County Fire Services and Training Center near Daytona. Around 9:15 AM Eastern Time, President Bush checked in to the Northern Florida Amateur Radio Emergency Service Net on 3.950 MHz using a portable station set up John Schmidt, AF4PU. Then the President made these remarks to the 40 or so stations listening to the net:

--

President George W. Bush:

"I want to thank all the volunteers who help make sure that Florida is prepared for any kind of emergency. I also want to assure you that your Federal government is doing everything we can to make sure that there is not an emergency--starting with unleashing the mighty U.S. military overseas to bring evil ones to justice. But should there be a need for a response, I want to thank you all for helping our communities be prepared. And finally, I want to tell you--we are lucky to be Americans and may God continue to bless this great land of ours. Thank you very much."

--

Needless to say the net members were delighted to have the President of the United States address them. More important, hams nationwide can now be sure that President Bush knows that Amateur Radio operators are ready to serve whenever he, and the nation, needs to call on them for help.

In Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

The complete story is on the web at
http://firstcoastcommunity.jacksonville.com/northfloridaamateurradiosocietynofars (Tnx NU4F, CQ Magazine)

**

HAM RADIO SCIENCE: TWO SOLAR MAXIMUMS THIS SEASON

In case you are wondering why the current solar cycle is still providing such amazing VHF and UHF DX, one researcher may have the answer. He says that the current cycle appears to be having a second peak and that this is really not very unusual. Henry Feinberg, K2SSQ, looks at the scientist and his latest data.

--

The most recent and ongoing Solar Maximum -- or Solar Max -- theoretically crested in mid-2000. Sunspot counts were higher than they had been in 10 years, and solar activity was intense. One remarkable eruption on July 14, 2000 caused brilliant auroras as far south as Texas. But after that, sunspot counts slowly declined and the Sun was relatively quiet for month-long stretches. Most scientists said that the Solar Max was over. But was it?

Now, as 2002 unfolds, the National Aeronautics and Space Administrations solar foorecasters say that it looks as if the Solar Max is back with us again. The Sun is again peppered with spots, eruptions are frequent and hams notice that the VHF DX keeps rolling in.

Why is this happening? Well David Hathaway, a solar physicist at the NASA Marshall Space Flight Center in Huntsville Alabama has one theory. Hathaway says that the current solar cycle appears to be double-peaked, and the second peak has arrived.

--
Hathaway Audio Here
In-Q: We have seen other cycles...
Out-Q: ...define this maximum
--

Scientists track solar cycles by counting sunspots and Hathaway is an expert forecaster of sunspot numbers. He says that sunspot counts peaked in 2000 some months earlier than we expected. He says that the subsequent dip toward solar minimum seemed premature and before long, sunspot counts reversed course and began to climb toward a second maximum that now appears to be only a few percent smaller than the first.

--
Hathaway Audio Here
In-Q: Its a bigger than average...
Out-Q: ...smaler than 19, 21 and 22.
--

Hathaway notes that there is a widespread misconception that solar activity varies every eleven years like a pure sinusoidal wave. It isn't. He says that solar activity is chaotic and there can be more than one peak in any given period. Translated for ham radio: Enjoy the VHF DX while you can.

For the Amateur Radio Newsline, Henry Feinberg, K2SSQ.

--

Hathaway says that the Solar Max eleven years ago was much the same as this one. The first peak arrived in mid-1989 followed by a smaller maximum in early 1991. And if you are interested in hearing more about this interesting phenomena from David Hathaway its as easy as taking your web browser over to www.rainreport.com. Or you can call on the phone to area code 847-827-7246. (NASA, RAIN)

**

HAM RADIO IN SPACE: HF ANTENNA INSTALLED ON ISS

High Frequency ham radio operations from the International Space Station could be on the not to distant horizon. This, after a successful space walk on January 25th to install another antenna on the orbiting outpost. Amateur Radio Newsline's Roy Neal, K-6-D-U-E, has the details.

--

The spacewalkers have had another good day in space. On Friday the 25th of January, Cosmonaut Yuri Onufrienko, RK3DUO and Astronaut Dan Bursch, KD5PNU, successfully mounted a second ham radio antenna near a docking port amidships on the International Space Station. It is made of flexible tape and is similar to but longer than another antenna installed on January 14th. That one tunes both VHF and UHF frequencies. The new antenna will tune HF frequencies.

ARISS Board Chairman Fran Bauer, KA3HDO, says it definitely will work on ten meters and may even be made to work on 15 and 20 meters. BUT right now there is no gear on board to handle those frequencies. Experiments using the lower frequencies are on the list of futures for ARISS but no timetable has been assigned to design and build them.

Owen Garriott, W5LFL, the first man to operate ham equipment in space, once prophesied that a five watt transmitter in orbit might well be heard simultaneously world wide. The great number of hams with good stations on the lower frequencies also makes them enticing to ARISS. It's a safe bet that serious consideration now is being given to expedite such a project. Once a station is sent up, the antenna will be waiting.

The new antenna is the second of four to be installed on board the space station. No timetable has been announced for the final installation. All of

these amateur antennas were built by Italy, tested and qualified in the US, to fit ports built by Russia, as befits the international nature of the ISS.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

Installation of the 2.5-meter long flexible tape antenna involved not only the mechanical deployment but routing cables and establishing the R-F connection as well. (ARISS)

**

HAM RADIO IN SPACE: THAT ANNOYING SATELLITE IS OFF 2 METERS

An annoying mystery satellite transmitting AFSK, frequency modulated Morse on 144.100 MHz for several days has been identified. It turned out to be a signal from the MAROC-TUBSAT satellite. This is an Earth-sensing spacecraft owned by a Moroccan government agency called he Royal Center for Remote Sensing. It was placed into a polar orbit by a Russian launcher on December 10, 2001.

As soon as he learned of the interference to amateur operations, Professor Udo Renner of the Center had the 144.100 MHz transmitter turned off. He then notified AMSAT Germany that TUBSAT was no longer on two meters.

But TUBSAT also has a downlink at 436.075 MHz. This system is only busy over North Africa and Europe and only when the control stations in Rabat and Berlin are activated. It has not been heard elsewhere in the world. (AMSAT-NA)

**

SPECTRUM PRESERVATION: ARRL SAYS IT WILL FIGHT TO KEEP RFID OFF 70 CM

The ARRL says that it will go all the way to protect the 70 centimeter ham band from a threat brought by commercial interests. At issue is a plan from SAVI Technology and already tentatively agreed to by the FCC to deploy unlicensed transient R-F identification tag transmitters operating between 425 and 435 MHz. These tags run at much higher field strengths and duty cycles than Part 15 rules now permit.

According to a League bulletin issued on January 29th, ARRL officials have already met with members of the FCC staff as part of the League's effort to stave off a band threat. The bulletin says that General Counsel Chris Imlay, W3KD, and ARRL Technical Relations Manager Paul Rinaldo, W4RI, delivered an ex parte presentation to FCC Office of Engineering and Technology staffers January

14th outlining the opposition of the ham radio community. (ARRL)

**

FCC: CHAIRMAN POWELL HOME AFTER HOSPITAL TESTS

Federal Communications Commission Chairman Michael Powell was discharged from the hospital on Friday January 25th. This, after a two-night stay in the to undergo tests because of a lingering stomach bug.

Stomach discomfort caused him to cancel appearances at the Consumer Electronics Show in Las Vegas on January 8th and again at the annual conference of the National Association of Television Program Executives on Wednesday January 23rd. Doctors advised precautionary tests that required overnight stays at Walter Reed Army Medical Center in suburban Washington. (Published news reports)

**

ENFORCEMENT: THAT SONG WAS NOT AS BAD AS WE THOUGHT

The Federal Communications Commission has dropped an indecency fine against a Colorado radio station. KKMG FM of Colorado Springs had been fined seven-thousand dollars for airing the edited version of Eminem's "The Real Slim Shady." This, after a listener wrote the regulatory agency to complain.

At the time the fine was issued federal regulators said the edited version still included some expletives and references to violence and graphic sex. But the FCC now says it has reconsidered. It now says that the lyrics in the edited version didn't violate its rules by being "patently offensive." (FCC)

**

RESCUE RADIO: BRAZIL RADIO OPERATORS HELP IN POWER OUTAGE CRISIS

A major electricity blackout hit at least five Brazilian states on January 21st, and it was hobby radio enthusiasts that let people know about it.

The blackout, which began at 1:30 p.m., hit hardest in the industrial southeast and the major cities of Sao Paulo, Belo Horizonte, Rio De Janeiro, Goiania, Vitoria and the capital, Brasilia.

According to news reports, Brazil’s National Energy Agency blamed the outage on transmission line failures. The same news report credited Brazilian hobby radio operators as informing authorities that subways in Rio De Janero and Sao Paulo were halted and that traffic lights were out snarling commuters in several areas.

The outage was caused by a failure at the Itaipu hydroelectric station in southwestern Brazil. A power-line failure caused thirteen of the dam's eighteen turbines to stop, cutting off nearly 20 percent of the country's energy. Power was restored about three hours later. The news story did not identify the radio operators as being hams. (Various shortwave news reports)

**

RESCUE RADIO: NEW INTER-JURISDICTION RADIO SYSTEMS BEING INTRODUCED

Santa Clara County California, police, fire and emergency medical personnel have never been able to communicate with one another at the scene of a major disaster. This is because each agency uses a separate radio system. That is expected to change this year.

Santa Clara County will be leading the nation in using new digital radio technology to solve the inter-agency communications problem. The new system will allow up to eighteen participating jurisdictions in any county to talk to one another instantly.

By way of example, once the system is up and running, officers involved in one of California's famed high-speed car chase will be able to talk directly to police in the neighboring jurisdiction as the suspect approaches that town. They won't have to switch channels or go through dispatch centers. This means less time wasted and the probability that lives will be saved.

While Santa Clara county is at the head of the pack in adopting this new digital communications technology, the same news reports say that and Washington, D-C is not far behind. (Cal-State Info.)

**

PUBLIC RELATIONS: A CHEAP SATELLITE

A Cheap Satellite is the name of an Associated Press item that highlighted the work of the faculty and students at the United States Naval Academy in the development and launch of the P C Sat ham radio satellite. The story tells how the twenty-five pound bird was built using off the shelf products including a tape measure for its antenna and rechargeable double A cell batteries for power.

The story was written by Tom Stuckey and moved on the wire on Wednesday January 23rd. It noted that PCSat, was the 44th amateur satellite put in orbit. It is one of more than a dozen built by university students around the world. (VHF Reflector)

**

CONVENTIONS & HAMFESTS: ORLANDO HAMCATION WEAK SIGNAL FORUM

The Orlando HamCation will host its first ever Weak Signal VHF and UHF forum. Beginning at 2 p.m. on Saturday Ferbruary 9th, the one hour session will be moderated by N2CEI, of Down East Microwave. Also, Tom Haddon, K5VH, will be on hand to motivate more Florida hams to become active on the Microwave bands.

If you are in the Orlando Florida area on February 8th to the 10th drop in on the Orlando Hamcation. For more details and or advance reservations, go to oarc.org/hamcat.html on the World Wide Web (W2BZY)

**

CONVENTIONS & HAMFESTS: DATE CHANGE FOR RADIOFEST 2002

Brian Broggie, W6FVI, asks that we pass along a date change for RadioFest 2002 sponsored by the Naval Post Graduate School Amateur Radio Club in Monterey California. The new date is February 23rd. More information is in cyberspace at k6ly.org/radiofest. (W6FVI)

HAM RADIO SCHOLARSHIPS: THE DARA SCHOLARSHIPS

The Dayton Amateur Radio Association is one of three ham radio organizations seeking nominations for its scholarship program for the 2002-2003 academic year. According to DARA, applicants must be graduating high school seniors in 2002 and hold any class of an FCC issued mateur Radio license. The scholarship awards run up to $2000, as determined by the scholarship committee. Money must be used toward tuition at an institution of higher education.

To obtain an application, send a self-addressed, stamped envelope to the Dayton Amateur Radio Association Scholarship Program, 9873 Lower Valley Pike, Medway, Ohio 45341. You can also obtain an application by e-mail to n8emo1@msn.com. Completed applications must be postmarked no latter than June 1st to be eligible for this years scholarship program. (DARA)

**

HAM RADIO SCHOLARSHIPS: THE FOUNDATION FOR AMATEUR RADIO

Another organization offering scholarships to hams id the Foundation For Amateur Radio. The Washington, D.C. area group will administer sixty-two scholarships for the academic year running from 2002 through 2003. Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $2500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (Foundation For Amateur Radio)

**

INTERNATIONAL - SOUTH AFRICA: SA RADIO AMATEURS OF THE YEAR NAMED

Turning to international news, South Africa is honoring two of its own as that nations Radio Amateurs of the Year. Q-News Graham Kemp, VK4BB, brings us the details:

--
The South African Amateur Radio Development Trust have announced the winners of the 2001 Siemens Radio Amateur of the Year Award. This award is made annually to a Radio Amateur who has made a major contribution to the Amateur Service either on a technical or development basis in ZS land.

The award has been bestowed jointly on Bradley Phillips, ZS5BP, and Garth Wilson, ZR6CY. ZS5BP for his work on the introduction of Iphone and the development of the Internet Radio Linked project. ZR6CY for his continuous efforts to develop communication skills amongst the youth. He has to date presented no less than 80 camps for Voortrekkers to learn the Morse code and basic communication skills.

For Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

This award is considered as South Africa's equivalent to the Dayton awards presented here in the United States. (SARL News, Q-News)

**
INTERNATIONAL - UK: KENWOOD TROPHY AWARDED TO G3XWH

Meantime, over in the U-K, Richard Horton, G3XWH, who chaired the RSGB's Future Licensing and Examination Forum has been awarded the Kenwood Trophy. This, for his significant contribution to training and development in amateur radio.

Horton recently retired from the Radio Society of Great Britain's Board where he was responsible for amateur radio development. His committee was responsible for much of the work that went into the creation of the new U-K Foundation Class license. (GB2RS)

**
DX

In DX, DJ4KW and DK9GG are currently active from Belize as V31YN and V31GW, respectively, through early February. Activity is on CW, RTTY and PSK 31. (RSGB)

And IN3QBR will be active from Vientiane as XW3QBR until the 31st of July. He will be joined, from the 20th of April until the 10th of May by IN3ZNR operating as XW3ZNR. (OPDX)

And R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28MHz with 100 watts to an R6000 vertical. For all three QSL as directed on the air. (RSGB)

**
THAT FINAL ITEM: CELEBRATING THE LIFE OF ED CLEGG W2LOY

And finally this week, if you were on the VHF bands in the 50's, 60's and 70's then the name Clegg Labs touched your ham radio operations. And as we hear in

this report, the family of the man behind the gear is inviting you to help celebrate his life.

--

Even if you did not own any Clegg gear, the chances are that you talked to someone on the air who did. Whether it was the top of the line Interceptor receiver and Zeus transmitter or the entry level 99'er transceiver, it was easy to spot a Clegg signal by its almost overpowering modulation that seemed just right for the R-F carrier it was on.

Almost every product that carried the Clegg label was designed by the company's founder Edward T. Clegg, W2LOY. When he moved the company to Pennsylvania in the 1970's, Ed took the call W3LOY. Likewise, after retiring to Ohio he traded the 3 for an 8, but kept the famed L-O-Y suffix.

And regardless of the call area, Ed Clegg was first and foremost a communications designer well ahead of his time. Even more important, he was a positive influence on just about everyone with whom he came in contact.

Ed Clegg left us last September at age 80. Now, his wife Martie will be hosting a gathering in March near the Clegg home in Lancaster Ohio. The purpose is to celebrate the life of Edward T. Clegg. And they are asking you to help.

Martie, her daughter Linda and Linda's husband Rob MacGuffie, K2HZN, are asking anyone who knew Ed to share in the celebration. They know that most of you won't be able to be in Lancaster Ohio on March 30th. But some of you do have memories, stories, photos and other Ed Clegg memorabilia that would help to make this day even more unforgettable.

If you have something to share, please contact Linda and Rob before the end of February. Their address is 70 Province Road, Gilmanton New Hampshire with a zipcode of 03237. Rob's cyperspace address is K2HZN@yahooo.com.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

By the way, a number of us here at the Amateur Radio Newsline began our ham radio careers using gear designed by Ed Clegg. In fact, our producer Bill Pasternak, WA6ITF, got to know Ed while Bill was still a teenager operating A-M on the 6 meter band. (Clegg family)

Check your coax lately?
About 0200Z they were S-9 on 80CW last night. On 20 and 15 they've
been in the S5-7 range here in PA.

Look at the time stamp on my comment and your "correction." Four minutes
difference on my reader. Since the time delays vary among servers, your
"correction" wasn't available when I made my comment.

I also noted that you made two posts originally, each one spamming groups that
wouldn't give a rat's ass about VP8GEO being on the air. Why all that effort,
or is just a habit you have developed from telling the world about the "latest
and greatest" news on the "Official" W9INN web page?

|Doing otherwise just makes it look like you don't like me.....

How could anyone possibly get that idea?

Hello Dave,
I am really "counting my blessings" that I got VP8GEO when I did.
They had been QRV on their first day just about an hour when I found
them on 17m ssb about s7. After a few calls they were in the log. That
was the very first day....I have since chased them from 10-20m and have
yet to even hear them again.... I learned from that it is never to early
in a dxpedition to get them into your log.

FB on you getting them...how about South Sandwich (VP8THU) did you
snag them too?

That is a good source for DX spots AA7YA....and just recently now
DX-Central has added some nice new - free - DX spotting features.

Once you setup a free account you can then also setup DX spot filters
by band and mode and also by originating country. DX-Central is the only
web browser based DX spot service that has filters.

Also they offer free email notification of DX spots of any prefix(s)
you want to be alerted about. Now I don't depend on the email spots for
my first level of DX info but it is a very good auxiliary source for
spots and for the chance to snag a new one.

It costs nothing to setup the DX-Central account....email address and
password and you're ready to go!

477. Info on JM1KNI/JD1 ???

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-03 02:32:06 UTC
From: "James P. Rybak" <jrybak@mesastate.edu>
Message-ID: <1012703252.104755@tshaper.mesastate.edu>
Source record: 14552

Does anyone have any info on JM1KNI/JD1 such as whether he is operating from Ogasawara or Minami Torishima? I assume that the QSL route is via JM1KNI.

Thanks.

Jim Rybak W0KSD

wrote:

|Hello Wes,
| 4 minutes is a long time in cyberspace and the fact remains my
|correction post preceded your sarcastic post. You even admit that...so
|it - was - available for reading before you posted.

One last time....

Let's say I open my newsreader at 0000Z and get all the new messages in my favorite groups. I spend thirty minutes reading some good stuff and then I come to your erroneous message.

I don't say to myself, "Self, you better get the new headers again because Chuckie Boy might have seen the error of his ways (highly unlikely) and posted a 'correction'."

So I make my post at 0030Z and close down. Later I log back on and take another look and wadda ya know, Chuckie sent a mea culpa at 0026Z. So you "beat" my posting by four minutes, but how was I supposed to know?

Besides, *I* can make a post and then re-read the headers and not see my own post for several minutes. Furthermore, why don't you review some of your very own references, at least one of which states:

"Only Post a Message Once.

Avoid posting messages to more than one newsgroup unless you are sure it is appropriate. If you do post to multiple newsgroups, do not post to each group separately. Instead, specify all the groups on a single copy of the message. This reduces network overhead and lets people who subscribe to more than one of those groups see the message once instead of having to wade through each copy."

Or:

"Avoid posting to multiple newsgroups.

Few things annoy Usenet readers as much as multiple copies of a posting appearing in multiple newsgroups. (called 'spamming' for historical reasons) A posting that is cross-posted (i.e lists multiple newsgroups on the Newsgroups: header line) to a few appropriate newsgroups is fine, but even with cross-posts, restraint is advised. For a cross-post, you may want to set the Followup-To: header line to the most suitable group for the rest of the discussion."

Here are the addresses you posted to in your original spam message number 1:

alt.ham-radio.hf,rec.radio.amateur.antenna,rec.radio.amateur.dx,
rec.radio.amateur.equipment

Here are the addresses you posted to in your spam message number 2:

rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,
rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.swap

So don't try to lecture me. I'm not the guy annoying the boatanchors and swap guys by spamming their group with messages about a dx station or a new "Official" W9INN Antennas page.

To the everlasting relief of the other readers, this will be my last comment on this thread.

Hello Wes,
I am so pleased to see you clicked on those Usenet Help Site links I provided for you. I trust the knowledge you gained from them will go a long way towards making you a more responsible Usenet reader / poster. In addition the general etiquette and courtesy values woven into those guidelines should help make you a better man and a more pleasant person to be around. Good luck to you Wes....you're on the right road now at long last....

Oh and finally....before ' you' lecture ' me ' about my Usenet postings or the promotion of any aspect of my site I would suggest you take a look at the FAQ Page located on the web site listed below. It fully addresses those concerns of yours that evidently run quite deep with you.

I'd like to add that, with you in mind, I went to my local
Radio Shack today. There I saw a " Optimus" AM/FM
Radio for around 50 or 60 US. I could not test its DX
potential. But I was impressed by its solid sound on AM
and overall weight. I also saw that it has hook-ups on
the back for ext. ant. - Very Important for any DX work.
I have no real knowledge of performance, etc. But I
might suggest checking it out. looks like it's one step
from clearance pricing.

Sez' the guy, who

- lost accounts with providers for spamming newsgroups
- doesn't know his head from his ass with regard to correct quoting
- resides in the killfile of many newsgroup oldtimers
- has continuously been critized for his unsolicited advertisement in
newsgroups
- uses a newsclient that deliberately ignores all technical standards
of usenet posting.

Sir, you are an oaf.

Dear people,

A few years ago I did sell all mine receivers and I want to start all over again as a SWL. Does anybody know what is a good receiver to start with again and what is on the market. I have a budget from 320 U$ (371 Euro). But I have another problem as well Iam moved to a new apartment and second floor in a flat and the roof is not flat but slanting (if I wrote it correct). I have a ceiling what I can use but there is still that antenna problem how can I solve this ?

Thanks for all the help in advance

Terry Mitchell

Hi Phil

It is a bit unclear, but there are actually rear-view mirrors that facilitate turns.

Look carefully at the top (exterior) photo and you can see them. In the bottom photo look behind the steering wheel and inside rear-view mirror and you can see the (out-of-focus) exterior mirror.

I live in an apartment and found the soltution long time ago.

Attached to my Kenwood TS-940-S is an ISOLOOP antenna, inside the spare room. But it comes with a high cost: the antenna costs EUR 600, but brings all the joys of amateur radio. It's hard when I think of my previous 3-el beam...

491. Re: OT , Maybe. What is Portable ??

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-03 19:47:21 UTC
From: Dan Yemiola <AI8O@yahoo.com>
Message-ID: <3C5D93C9.C18707AA@yahoo.com>
Source record: 14567

a mobile station can be used while in MOTION.
a portable station is one that is designed to be easily moved from place to place but can only be used while stopped.
connecting the radio to a whip mounted on the van and configuring the radio system so that it can be used while in motion makes it a Mobile. A MOBILE radio system does not have to be mounted on a vehicle to make it "mobile" a hand-held HT with an internal power source, that you can use while walking is a MOBILE.
A radio system configured in such a way that you have to stop motion in order to use it is PORTABLE.

In your van scenario throwing the wire over a tree makes it a portable (you have to stop motion in orfer to operate), if you connect it to a van mounted whip antenna and then talk while driving down the road you have converted it to mobile.

These distinctions were much clearer in the 1930's when the FCC first made them. Improvements in battery technolgy, ICs, the general miniaturiazation of electronic components thru the use of PCBs,ICs, SMDs, etc have blurred these distinctions over the years.

I have an ad from the 1930's showing a new "light-weight" ultracompact, HF, field portable radio station. In the ad RCA mentions that just two men are required to pick up and place this unit in a truck for long range movement.

I think you will find 7 inches is resonant as a half-wave at about 432
MHz! Final adjustments are made by progressively snipping small
pieces off the stub.

For Greg the dust's solid, to me it's sick, whereas on you it's playing active.

She'd rather move finally than explain with Shelly's young cat. Hey, Katherine never lifts until Allen solves the raw onion usably. We excuse the sharp printer. Let's seek among the sticky cafes, but don't laugh the polite puddles. Alejandro lives the carpenter near hers and angrily jumps. I will wistfully comb before Norris when the pretty frogs fill before the dark lane. Tell Alice it's handsome irrigating below a orange.

If the sour papers can scold finitely, the lost exit may dream more shores.

No boats will be clever sweet cups. The bushs, dryers, and raindrops are all cold and fresh. Johann! You'll change cases. Little by little, I'll judge the porter. Why doesn't Ken taste halfheartedly? You won't kick me hating in your brave kiosk. Occasionally Julieta will call the tape, and if Sarah deeply improves it too, the sauce will wander above the healthy hallway. Estefana, to pears glad and closed, walks behind it, burning cruelly. Who orders biweekly, when Alvin likes the elder cloud inside the field? Are you good, I mean, attacking within deep cans? Some angry dogs attempt Karl, and they slowly dye Samuel too. We clean them, then we simply believe Norma and Tom's empty grocer. She will shout generally if Owen's hat isn't lower. How did Russ talk the kettle for the thin lentil? A lot of durable ointments above the tired star were killing

on the humble rain.

I was sowing hens to stale Bob, who's climbing before the floor's sunshine. What Tony's short unit creeps, Georgette cares without worthwhile, full forests.

Oliver's fig departs through our draper after we learn in back of it. Both moulding now, Steven and Paul covered the old roads for dirty film. When will we waste after Laura measures the strong structure's barber? Until Brian converses the elbows familiarly, Evelyn won't open any blank windows. To be lean or unique will recommend hollow buckets to subtly reject.

It can love once, recollect superbly, then cook beside the powder in back of the moon. It's very strange today, I'll grasp stupidly or Ollie will pour the shoes. While smogs smartly dine painters, the pitchers often irritate beneath the rude butchers.

Fucking don't answer wrongly while you're arriving inside a bizarre envelope. He might bimonthly expect abysmal and joins our lazy, cheap plates on a desert. The poultice above the inner office is the twig that pulls quietly.

I am truly rural, so I promise you. She can behave eerily, unless George teases doses among Johann's carrot. Where will you nibble the dull clean weavers before Gregory does?

Plenty of new stupid forks will frantically receive the pins.

505. VP8GEO on RTTY?

Newsgroup: rec.radio.amateur.dx

Although I have worked the VP8GEO DXpedition in CW and SSB on several bands,
I have not heard them on RTTY yet (nor seen any spots saying they had been
on RTTY and I missed them). They ran lots of RTTY on the previous island -
does anyone know if they plan to repeat that?

Hello Murray,
Thanks for the notice. For those that may want to actually visit the
web site you mentioned here is the URL for the 4L4FN/P5 operation....

http://www.amsatnet.com/p5.html

I "thought" I had worked N. Korea last year when I snagged HM40DX...but
alas a slim.....

I trying to QSL ZK2MO via OM2SA.

OM2SA's addresses as given at qrz.com and buck.com are somewhat different.

In trying to clarify this, I emailed to the given address and this failed.

Anyone have the correct info?

73,

Wes

Thanks. I know the one above worked for FO0MOT/A (that I didn't need) sent last
July but I haven't received one for my 80 meter QSO with A35MO (that I do need)
sent two weeks later in August so go figure.

It could be there is some delay or snag with the A35MO logs? That
could explain why the FO0 card came through but still nothing on A3 even
though both cards went to the same manager.

I have received some direct and manager DX cards a full year or more
after the initial mailing. Some arrive that I forgot I even sent.
Good luck on the straggling cards....

I have had spotty luck with Juraj over the years. I didn't get the 3A/N9NC card he was managing. I also didn't get the XR0ZY. I e-mailed Juraj and he stated he didn't get the cards. I then sent it registered & received both cards. I also sent the FO0 cards registered, but I tried the Samoan card simply direct airmail without registration and received the card back.

Juraj has had some trouble with the mail. It doesn't appear to be his fault. You may want to try registered mail if you really need the card.

I don't need it that badly. <g> It's a band country, I have it confirmed for
other bands.

I sent registered to 5A1A and he moved before it arrived :(Ten bucks down the
tube because I doubt that it will be forwarded to Germany.

Thanks for the tip.

Hi all,

This is the first time I have posted to this ng. I have a question, maybe someone in here would be willing to help with. My wife is a big fan of the Bob & Tom show. Their local affiliate recently dropped them from their Omaha, Ne station. They are still on a station in Lincoln, NE which is about 60 miles away. I was going to use a no longer used TV antenna on top of the house to try to recieve the show which will not come in on a whip antenna like on a standard boom box kind of thing. The problem I am having is finding a desktop radio with 300 ohm external antenna hookups. One other problem is that there are 2 powerful stations locally at 92.3 and 93.3 and the station I want to listen to is at 92.9. So I guess selectivity would be an issue also. Does anyone in here know of a radio that might work well in this situation without spending a ton of money? I don't care about any bands other than FM. Also, even though appearance isn't a major issue, she does kind of like the retro 40's and 50's kind of look. Anyway, thanks in advance for any help.

Spolts like this are even worse:
24.900 VP8THU..... ignore - just test
28.000 YA5T...........any activity today?
14.000 P5/TEST.......TEST pse ignore

If you want to see if your spots get through, why not take a REAL station
QRV?
Oh well, I've been using the cluster less and less lately...

Many of us Ham's have been pioneers for some time by offering electronic
QSL card service. Now the ARRL is accepting eQSL's for DXCC credit.....

http://www.eqsl.cc/qslcard/DXCCInfo.cfm

I qsl 100% electronically....check my web site!

However, if you read the details, this only seems to apply if you have
eQSL print and mail a physical card to you by postal mail (and only
in the US, at least at this time) at a cost of $1 per card ... this
seems
to defeat the economy of eQSLing compared to "the old way." It also
would seem to put eQSL at an economic disadvantage compared
to the ARRL's proposed "LOTW" ... if I were eQSL I wouldn't be so
happy about this. (I'm not complaining about eQSL's charge for
printing and mailing a card ... that doesn't seem unreasonable for
the service ... I just view the process as an unnecessary step which
adds unnecessary cost ... to the disadvantage of the eQSL folks.)

DISCLAIMER: I am NOT affiliated with eQSL in any way and I'm
not really an awards chaser ... for me, it's just the principle of the
thing, where I see the eQSL folks as having come up with a good
idea that can save hams a great deal of cost on QSLing, and it
appears to me that the ARRL is making things tough for them in
ways that I view as arbitrary and unnecessary.

Hello Carl,
This decision and news was just released so there are a few loose-ends yet....soon it will be world-wide. The granting of permission for eQSL - DXCC cards acceptance was for any and all cards. The nice people at eQSL will be adding world wide capability very soon...

DXCC qsl'ing is now -cheaper- and -faster- than ever....a huge and bold step in the right direction.

Yeah, and watch this "convenience" see the demise of DXpeditions!
DXpeditions rely heavily on income & donations that is included with the
request for a good ol QSL card.

I hope you advocates of e-QSLing have already worked the rare ones on all
band/mode combos, coz it'll be a different ball game now.

So there is actually *no* difference at all between a qsl manager who does a good job and this commercial enterprise named eQSL.

> DXCC qsl'ing is now -cheaper- and -faster- than ever....a huge and
> bold step in the right direction.

Do you seriously believe that *any* dxpedition will use eQSL as their manager? I'd rather rely on guys like Derek to handle all QSL-affair for *any* dxpedition more efficient, thorough and independent than any commercial enterprise.

I for my part would rather have logs online under total control of the owner than have control passed over to an enterprise that benefits from every single card it can send out.

Peter Lemken
Berlin

PS: Please limit your posting to one group. The antenna and equipment guys couldn't care less about eQSL.

F'up repaired

Nah. They'll just require a "donation" via Paypal before your call shows up on
eQSL's "service."

Just think... you not only need a rig and antenna, you'll need Mastercard too
<g>.

I think I'll stick to green stamps and mail. I like getting 'real' QSLs and I
give the incoming DX stamps to the neighbor girl for her collection.

547. Why don't DX listen up on 40 SSB

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-10 08:01:34 UTC
From: thompson@mindspring.com
Message-ID: <a46uvbfui1@slb4.atl.mindspring.net>
Source record: 14529

About once a year (maybe more) I get all riled up at listening to stations work simplex between 7045 and 7100
SSB but never listen up. I got into the PACC contest and after working several on 20 I went to 75 and worked a station
(I heard several around 3735 not listening up). I went to 40 and worked exactly one station (the same PA9DD I worked on 75).
I heard 15 other stations with several very loud but they just never listened up. After one hour I gave up and pulled the plug on the PACC log!!!!!!

I have given up working the SAC and HB9 contest for this same reason. I never have understood why so many forget to listen up. They are missing many contacts.

The ARRL has asked for USA stations to be able to work SSB down to 3700 so maybe in time I can work those on 3735. But on 40 any SSB contact is split frequency. Every year I ask the ARRL and FCC to allow USA stations to work SSB between 7050 and 7100 but only to call a station not to call CQ. Its time for the USA 40 meter hams to stop being second class citizens!

Source record: 14524

I received 2 cards from him (Aug. & Oct. 2000) but I had to wait
366 and 148 days for the cards. If my memory serves me right, Ralph
works for the Swedish ambassy and his job does not allow him to
answer QSLs on a regular basis.

The DXCC board is certainly not above the law regarding digital
signatures, but I wonder if they are legally required to honor a
specific
QSL card or even issue an award to anybody. It's propably all at their
discretion...

Presumably by using radios (hence the name ham *radio*), otherwise you get silly concepts like:

> ILINK is a software program
> created by Graeme, Mï¿½CSH, which enables repeater users and licensed hams on
> to the internet to connect to each other for arm chair quality QSO'S.

> Some people would argue this isn't ham radio. But I refer you to the

That's what you get when you start with a misfired premise.

> ILINK is the best way I know to talk to other hams around the world in qso
> style... Without the interruptions of non hams and the like. I have talked
> to nearly every country in the world over 20 meters and absolutely love it.

OK, but it's still not ham radio, much like a software that might enable you to talk to astronauts won't make you an astronaut. Or like posting here doesn't make this a QSO.

I have to quit telling babes I'm a MIR cosmonaut?

I can't count E-mails toward DXCC?

Damn!!!!!!!!

I knew ham radio was going down the toilet, this proves it!

Glenn

Hmmm...

I see you didnt read the post did You!

It s too bad you cant see the bigger picture...

HAMS TALKING TO HAMS!!!

Maybe if you spent more time communicating
and less time complaining you wouldnt be so
negative toward hams who cant get on the ham bands
and still want to talk to I guess negative nellies like you!

You (((((will))))) be in a nursing or care facility
some day I hope, I pray
when your there!

You can use ilink to get out!
and talk to other hams.. I know you wont
have a 20m mono bander or a dipole
strung up there
GOOD luck
&
God have mercy

LIVE AND LET LIVE

Jo

Dave,
You think the broadcast stations in the 7.1-7.3 MHz range are loud
here? You should listen from over there - not pleasant!

When the choice is between No Ham activity due to Ant,RFI restrictions or something like I Link
then it's a no brainer.Sure it's like extending your Mic / control cable thousands of miles to a
distant repeater but it does allow hams to communicate,rag chew etc with their counterparts across
the nation and world with 2m FM quality to boot !

The problem of hams moving into houses / apts with restrictions is an exponentially escalating urban problem in many countries.There are countless idle 2m / 70 cm / 10m / 6 m repeaters all over the world that make them a natural for I Link.Those repeaters (being located in less restrictive areas) do not pose the same problem for communities as the urban ham station.
One could have a PC in every room in every house but that is practically impossible with an HF rig and antenna.

Rather than lose these hams I Link provides a means to retain their interest.Yes it does away
with all the multitude of problems and expense of equipment and antenna's and NO it's
not pure radio.It's just another mode / system for communication.

If Ham Radio is the top priority in your life and you have acres of land and the resources for top
of the line equipment and monster antenna's then go for it.If not I Link provides an alternative
for those not so lucky or inclined to set up such stations.

In addition I Link does not have the restrictive "closed shop " aura of many of the IRLP nodes.

Whether it flourishes or not depends like most things in our Democratic society.The users
vote of choice will determine it's future.

Amateur Radio Newsline Report 1278 – February 8, 2002

Amateur Radio Newsline report number 1278 with a release date of Friday, February 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Another Anthrax scare halts mail to the FCC in D.C. and ham radio growth may not be as good as it seemed. These stories are first on Amateur Radio Newsline report number 1278 coming your way right now.

(Billboard Cart Here)

**

AMERICA AT WAR: FCC STOPS D.C.MAIL DELIVERY DUE TO NEW ANTHRAX SCARE

The Federal Communications Commission says that it will not accept paper mail in the Washington D.C. area until further notice. This, after a trace amount of the Anthrax virus was found during a routine test. Amateur Radio Newsline’s Paul Courson, WA3VJB, is in the nations capitol with the details
--

The scant amount of anthrax contamination found at a Federal Communications Commission mail facility in Maryland last week was consistent with cross-contamination of mail. At least that’s what the result of tests conducted by the Center for Disease Control and Prevention showed.

The FCC's mail processing facility in Capitol Heights Maryland, outside Washington, was tested about a week and a half ago as a routine precaution. One sample taken tested positive for Anthrax. The C-D-C blames the problem on cross contamination of mail. This means one or more pieces of mail from another facility may have inadvertently brought the contaminant to the Maryland site.

The agency is arranging for the facility to be decontaminated and re-tested. Mail deliveries, which have been halted, will not resume until the area is found to be anthrax-free. For ham radio, this only affects such things as requesting or commenting on rules change requests.

The FCC said it would also test the mail room at its Gettysburg, Pennsylvania, facility to make sure that it is Anthrax free. Gettysburg is where most Amateur Radio related mail including license applications and renewals are sent and is not affected by this latest paper mail suspension order. At least not so far.

For the Amateur Radio Newsline, I’m Paul Courson WA3VJB in Washington.

--

Late last year five people, including two postal workers, died of the inhalation form of anthrax and more than a dozen were infected in a series of attacks that followed the terrorist raids on the World Trade Center and the Pentagon. So far no arrests have been made in that case. (Published news reports)

**

SPACE AND SCIENCE: ON-ORBIT COMPUTER FAILURE CAUSES ISS OUTAGE

Ham radio was there but it was not needed. That’s the basic wrap up after a computer failure aboard the International Space Station sent the 17-story complex into a slow drift for a few hours on Monday February 4th.

The temporary outage also disrupted voice communications with the ground using normal channels. It also brought science research to a halt. But NASA officials said that neither the station nor its crew ever were in any danger.

The station drift was halted about 17:00 GMT. That enabled the crew to begin the job of re-orienting the stations solar panel arrays. Once normal power levels were restored, systems and experiments that had been shut down were brought back on line.

The computer shutdown was eventually traced to a defective hard drive. James Hartsfield, a spokesman for NASA's Johnson Space Center in Houston said that the three ham crew was never in any danger as a result of the failure. He termed it nothing more than an interruption to their normal work day.

Launched last December 5th on board the shuttle Endevour, Russian cosmonaut Yuri Onufrienko RK3DUO and U.S. astronauts Daniel Bursch KD5PNU and Carl Walz KC5TIE are the forth crew to inhabit the I-S-S. In addition to all of the high tech communications gear the crew also has ARISS - the ham radio station on board the International Space Station as backup voice and data communications. It was available, albeit not needed this time around. (ARNewsline(tm) from NASA Release)

**

HAM RADIO GROWTH: CENSUS REDUX

Some dark news following the good news on ham radio growth patterns. The numbers may not be as good as we reported two weeks ago. So says Fred Maia, W5YI, who follows growth trends in ham radio. And Fred says that the numbers we presented are overly optimistic:

--
Fred Maia:

“The FCC database is a database of all amateurs who have been licensed for twelve years. Thats ten years for the license term and an additional two. The reason it stays in the database for the additional two is so that it can be renewed diring the grace period. Thefefore, the licenses in the database are two years more thanthe ten year term or twenty percent inflated.”

--

In our story we used statistics from several sources including QRZ, W5YI and others. But Fred says that there are more recent numbers that show things may not be as good as they may seem on the surface.

According to Fred, as of January 15th 2002 there are actually only 98,030 holders of the Extra class license, 86,425 legacy Advanced, 138,546 Generals, 318,603 Technicians and legacy Tech plus and only 39,972 Novice class. The total is 681,576. That is considerably lower than the 720,194 in the latest QRZ census and 10,424 lower than the adjusted 692,000 we believed to be accurate.

The bottom line. Once you take away the expired licenses that are in their grace renewal period, the club and military recreation stations and the like the numbers tell a different story. One thats not nearly as rosy as we and others thought only two weeks ago. (ARNewsline(tm))

**

WINTER OLYMPICS 2002: COMMEMORATIVE STATION ON THE AIR

The Winter Olympics are in Salt Lake City Utah and ham radio is helping to celebrate the games with a special events station. Linda Reader, N7HVF, has more:

--
“Its going to start on Thursday at 5 PM Mountain Standard Time and it will go until the 25th of February. It will be available on all bands, so people will only need to listen around. The station call will be W7U and the trustee is W7EO.”
--

Again, listen for W7U celebrating the 2002 Winter Olympics through February, 25th. (N7HVF)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the WB2FKZ repeater serving West Babylon New York.

**

SPECTRUM: WHITE HOUSE PROPOSES PAYOUT TO CHANGE FREQUENCIES

The Bush administration says that it will propose setting up a $715 million fund to reimburse federal agencies that relocate their RF operations. This, for moving away from spectrum that has already been auctioned to commercial service providers.

In the past, federal agencies have had to negotiate with the winning bidders to cover relocation costs. In fact, following the September 11th terror attacks the Pentagon said it would not move off bands that it uses for military training and other purposes without sufficient funds to pay for relocating.

This created a stalemate over making available airwaves hotly desired by mobile telephone companies like Verizon Wireless. Now, in his budget just sent to congress, President Bush proposes setting up a fund to streamline the reimbursement process. Auction receipts to cover agency's relocation costs would be paid into the fund and federal agencies would be reimbursed for their relocation costs out of the proceeds.

What does this mean for Amateur Radio you ask? Simply that more spectrum that hams share with the government and military could be up for grabs sooner than most thought it might happen. But even with the subsidy some analysts of military communications say that it still could take several years before you see any spectrum moves take place. (Published reports)

**

FCC: OLYMPICS CAN USE 2300 MHZ HAM BAND FOR OLYMPICS

Broadcasters at the 2002 Winter Olympics have been granted a Special Temporary Authority from the FCC to use a ham band for their coverage of the Salt Lake City games. The S-T-A was made available at the request of the Salt Lake Organizing Committee R-F coordination group to use 2300 to 2305 and 2390 through 2450 MHz for remote pick-ups at various Olympic venues.

Unlike Australia two years ago, this FCC action does not take hams off the air nor does it forbid amateur use of the band during the period of the S-T-A. Instead it took action reminiscent of one that helped to establish ham radio's "National Frequency Coordination Council." The agency told all spectrum users that it had designated the Salt Lake Organizing Committee is the single point of contact or "SPOC" in regard to all Olympics radio frequency requirements. This delegated authority continues with the committee through March 31st. (FCC, Broadcasting & Cable, ARNewsline(tm))

**

PUBLIC SERVICE: HAM RADIO AT THE SUPERBOWL

Last week's Super Bowl played in New Orleans between the St. Louis Rams and the New England Patriots was a squeaker to the very last play. With the game tied at 17 to 17, in the 4th quarter, New England opted for a Field Goal that brought them victory in the very last seconds of normal play. It was a game seen by millions, but what t-v viewers did not see was the work of a group of New Orleans area hams who were a part of the behind the scenes communications effort for the game. Amateur Radio Newsline's Don Wilbanks, KC5MFA, lives in the Big Easy and has this look at the role that ham radio played:

--
While thousands cheered on the Rams and Patriots inside the Superdome and millions watched on television around the world, a handful of New Orleans hams were busy outside in the streets of the Crescent City.

--
“K5OEP go ahead.” “Checking in, nothing to report. Everything’s normal. WA5RT 2104 aaah, Poydras and South Claiborne.” “K5OEP roger, 2218. Other station?”
--

K5OEP is the call sign of Southeast Louisiana ARES. New Orleans area hams assisted the American Red Cross as they provided tracking for those sent to area shelters or hospitals should the unthinkable occur. Several Emergency Response Vehicles were in use feeding the workers and standing by in reserve should they be needed in an emergency. The ERV’s had a staff of 2 plus a ham with voice capability and APRS tracking. There were “Action Teams” standing by with a ham and a dual band HT. Hams also manned a command post trailer at City Hall as well as the Red Cross operations center on Canal Street and another Red Cross office in suburban Metairie. The communications operations began on Friday, February 1st and continued Saturday as well as Super Bowl Sunday. Tom Miller, AC5TM, ARRL Louisiana Section Emergency Coordinator and Keith Barnes, W5KB of the Red Cross were instrumental in putting the effort together. The local CBS affiliate, WWL-TV channel 4 did a lengthy report on the Red Cross, of which about a minute was focused on the hams. Several hams were featured on camera in the piece. Thankfully, this is representative of most of the radio traffic.
--
“K5OEP this is W5GAD.” “W5GAD, K5OEP go ahead.” “Just checking in Josh and, um, if it’s possible could we get a cup of coffee next time the truck comes down this direction?” “This is KC5BCR, we’re gonna take care of that coffee request.”
--

Only three things occurred that could be considered out of the ordinary... a semi-nude escapee jumped off a bridge to evade capture, a Rolodex in the Superdome caught fire from being too close to a light and the New England Patriots finally won the big game. And isn't it fitting that an underdog team called the Patriots would be victorious on this first Superbowl since September 11th. Next on the agenda for the city... Mardi Gras on Tuesday, February 12th. From Party Central in New Orleans, Louisiana, I'm Don Wilbanks, KC5MFA.

--

Before we leave this one we have some interesting statistics. According to the Broadcasting and Cable newsletter, Super Bowl 36 delivered the Fox Television Network a 42.5 rating and 61 share in what are called the metered Nielson overnight market ratings. This means that about 67 percent of United States households with television sets had them tuned to the game at some point during the telecast. (ARNewsline(tm) - Produced by KC5MFA with sound provided by KD5BLV)

**
RESCUE RADIO: HAMS ASSIST FOLLOWING QUAKE IN TURKEY

Amateur Radio operators in Turkey were among the first to respond in the wake of a earthquake that rocked the province of Afyon on Sunday February 3rd. More than forty were killed and at least 170 were injured injuries were reported in

the aftermath of the 6 point zero tembler. Structures were destroyed and lines of communications were cut. Enter Amateur Radio.

According to an ARRL bulletin members of Turkey's Civil Defense Search and Rescue Team responded following the quake. The bulletin quotes Aziz Sasa, TA1E, the president of the Turkish national Amateur Radio society as saying that S-A-R communicated with it's headquarters in Ankara and within the affected area. This was because ham radio was the only long and medium-range communication resource available until normal lines of communications were restored. Most ham radio communications was on VHF using a system of linked repeaters. (ARRL)

**

RESCUE RADIO: AMATEUR RADIO OPERATORS HELP SAILBOAT IN DISTRESS

The ARRL Letter says that Amateur Radio played a role in the rescue of two people aboard the sailing vessel Antigone. This, after it ran aground off Honduras on Thursday, January 24th.

Ed Petzolt, K1LNC, of Hobe Sound, Florida, told the Letter that, despite some apparently deliberate interference, members of the Intercontinental Net on 14.300 MHz helped relay communications from the vessel, which was equipped with an High Frequency marine radio.

David Walz, AG4LI/HR6, in Honduras was in contact with the boat and passed traffic from the stranded mariners to the Net. Petzolt said he was able to patch the US Coast Guard in Miami through to Walz, so the Coast Guard could obtain additional information and coordinate with Honduran authorities.

Petzolt said the two passengers aboard the 40-foot vessel were safe, and the boat was on the beach. The FCC is reportedly investigating the interference issue. (ARRL)

**

HAM RADIO SCHOLARSHIPS: QUARTER CENTURY WIRELESS ASSOCIATION

The Quarter Century Wireless Association has announced its funding several scholarship for 2002. There are eleven QCWA scholarships valued at $1000 each and five valued at $1500 each to be awarded later this year. Hams interested in applying for the QCWA Scholarships should contact the Foundation for Amateur Radio. The Foundation administers the scholarships sponsored by the QCWA. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (QCWA)

**

HAMFESTS: LIMARC N.Y. FEBRUARY 24TH

LIMARC -- New York's Long Island Mobile Amateur Radio Club will hold its annual indoor Ham Radio flea-market On Sunday, February 24th. Location is the Levittown Hall beginning at 9 a-m. More information is on the web

www.limarc.org. (N2DO)

**

THE HANDI-HAMS: 2002 CALIFORNIA CAMP FULL

The Minnesota based Handi Hams say that their California Radio camp is now full. This year, campers will be treated to presentations by Jeff Reinhardt, AA6JR, for Alinco, and everybodys favorite ham radio instructor Gordon West, WB6NOA. The dates for the 2002 Handi Ham California Camp are March 3rd to the 10th at Camp Joan Mier in Malibu. More is in cyberspace at www.mtn.org/handiham/workshop.html. (HandiHams)

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

EMERGING TECHNOLOGY: SUPER NET HAS ARRIVED

Australia’s new super-net has had its first successful demonstration, proving it can carry an enormous amount of data between two locations. In fact, its not just fast. It is virtual reality come to life. Q-News Graham Kemp, VK4BB, has a look at what super net can do:

--
In its 'maiden voyage,' the new high speed networking technology --10 Gigabit per second Ethernet -- ran a revolutionary combination of technology that allowed two people, in different locations, to work together on a virtual 3D object, each being able to feel the object and see what the other person was doing to it. At the same time they could use a studio quality video link to communicate.

These two functions were tested in a situation where they had to compete against a volume of network traffic equivalent to Sydney's telephone system at peak levels.

The demonstration involved networking a virtual environment from two separate sites, CSIRO's Virtual Environments laboratory at the Australian National University and CSIRO's corporate headquarters several kilometres away.

--

According to Graham, networks such as this will allow users in several locations to feel computer generated objects such as body organs. Among other things, this tactile ability means a surgeon could train many students in different cities at the same time. (Q-News)

**

EMERGING TECHNOLOGY: CENTRAL STATES VHF SOCIETY CALL FOR PAPERS

The Central States VHF Society will be holding it's 36th Annual Conference later this year. The dates are July 26th to the 28th at the Sheraton Four Points Hotel in Milwaukee, Wisconsin.

And now comes an invitation to those interested in making presentations at this event. You are invited to submit an outline to Marc Holdwick, N8KWX, who is this years Technical Program Cairman.

Holdwick says that any topic related to weak-signal VHF operation is welcome and can be submitted in either paper or electronic format. But says N8KWX, those submitting will be required to have the finished work in his hands by May 5th to be included in the printed Proceedings.

If you are interested in taking part, you can contact Mark Holdwick by e-mail n8kwx@csvhfs.org. His snail-mail address is PO Box 6051, Buffalo Grove, Illinois, 60089. More information is on the web at www.csvhfs.org/CSVHF02.HTML (CSVHFS)

**

EMERGING TECHNOLOGY: RF CONTROL OF BIOMOLICULES

Scientists from the Massachusetts Institute of Technology Media Lab report that they can now control biomolecules with radio frequency energy. Bruce Tennant, K6PZW, reports:

--
Biomolecules such as proteins and nucleic acids are basic building blocks in nature. They carry out a wide variety of nano-scale functions, many of which have proven useful in drug discovery, drug delivery, biocatalysis, and bio-materials. But to optimally exploit these capabilities, researchers must be able to rapidly control their activity.

Now in the paper, titled "Remote Electronic Control of D-N-A Hybridization Through Inductive Coupling to an Attached Metal Nanocrystal Antenna, researchers describe a unique method to do this. One that employs the phenomenon of inductive coupling to metallic nanoparticles by radio frequency energy to specifically and remotely control DNA molecules. And they say, it works.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

Their paper was published in the January 10th issue of the journal Nature. More information is available at www.engeneos.com. (Technology Today)

**

INTERNATIONAL - UK: NEW RSGB PRESIDENT

The Radio Society of Great Britain has a new President. As of January 1st, Bob Whelan, G3PJT, has taken up the leadership position at the United Kingdom’s national ham radio society.

Whelan says that he is looking forward to the challenges ahead in raising the awareness of the value of Amateur Radio as a way of interesting the next generation of radio engineers and scientists. He will serve a two year term leading the RSGB. (GB2RS)

**

INTERNATIONAL – SOUTH AFRICA: NEW SHORTWAVE GUIDE

Media Network reports that a new comprehensive country-by-country guide to domestic and external shortwave broadcasts from sub-Saharan Africa, including opposition broadcasts to the African continent, has been added to the British DX Club web site. The guide, compiled by BDXC editor Tony Rogers and fully updated for the winter schedule period, is available in by-country and by-frequency versions. It can be found on the Articles index page of the web site at www.bdxc.org.uk. (Media Network)

**

CONTESTS: GREAT LAKES QSO PARTY

The Great Lakes QSO Party will begin on Saturday, March 9th at 17:00 UTC and run through Sunday March 10th at 04:00 UTC. The object of this contest is to work as many Great Lakes States as well as VE3 and VE4 Canadian provinces as possible during the allotted time. C-W and SSB are the only modes permitted and operation is on all bands except for WARC. Logs must be submitted by mail before April 25th to the address listed at the contest website. Look for more information at www.geocities.com/mdxa1/qsoparty.html. (E-mail)

**

DX

In DX, the Trindade 2002 PWØT team reports that several major sponsors have come forward providing vital support for the upcoming DXpedition. ICOM America will be providing a number of ICOM IC-756 PRO II transceivers. ICOM will also be sending along an IC-910H for satellite operation. Possibly the first-ever satellite activity from Trindade.

But that’s not all. Electril, a Brazilian manufacturer, has begun shipping antennas to the team staging area and Bob Heil, K9EID, of Heil Sound has personally made arrangements to insure that the DX’ers will have new reliable headsets. Meantime, JA1FGI and JA1WSK have covered the cost of purchasing and shipping a complete RTTY, PSK-31 and SSTV equipment package. Lastly, its reported that the Six Meter Amateur Radio Klub and the Chiltern DX Club are the first organizations to provide the D-Xpedition with financial support.

The operators will leave Rio de Janero on February 15th for Trindade. More information is at the DXpedition website located in cyberspace at www.trindade2002.com (PW0T release)

**

THAT FINAL ITEM: THE SWOOPER

And finally this week, a loud buzzing noise being heard in the international shortwave band is apparently a new RADAR system used to measure wave height. According to Mark Fine, the system is located at Barnegat Bay New Jersey and transmits a one megahertz wide signal in varying five megahertz wide segments. Take a listen:

---
swooper audio here
--

Fine tells Amateur Radio Newsline that he made that recording on 4.795 MHz at 1850 UTC on February 5th. He was listening on a Drake R 8 A receiver set to upper sideband and a 2.3 kHz bandwidth. He says that during the evenings this beast takes over a whole band and is heard as far away as Europe and South America.

Already, some SWL’s have nick-named the noise a "swooper" because it sweeps quite fast making a "swoop" noise as it goes by in SSB. Others have called it the Windshield Wiper Network, which they say is very apropos. (DXLD, CGC Communicator with “Swooper” audio provided by Mark Fine).

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). It is a shame when some people are so thick headed/thin brained,
that they can not accept new ideas. I personally have no use for
Ilink, but I think it is an interesting concept. I guess Zoran still uses
spark gap as ssb is some new fangled idea not worth pursuing.
-Geesh... now I feel better.

I guess the worst call for CW pileups would be UR5NN. Once the DX calls
you back with UR5NN 5NN everone goes TU 5NN :-))

Yes, logger is good. I use it. However it has a few major disadvantages about QSL-ing. I hope Bob will fix that in his new 32bit version. Saying that, I and few other people suggested that on the logger reflector but Bob doesn't seem to be interested in that.

I was using Log Plus, DOS based logging program and IMHO it is the absolutely best logging program. However - it's DOS based.
The new windows version of Logplus is in development and coming soon. From what I've seen on www.logplus.org he's going the right way to blow all other windows based logging programs away.

Yeah, I suppose it's inevitable, but I for one will not appreciate an electronic QSL as much as I do the old-style postcard kind. I like seeing the pictures chosen by the DX, I like it when I get a card with a hand-written message on it (yeah, that's pretty rare) and I like getting stamps from the DX country on their envelope.

Sure, lots of people now just print out a stick-on label for their card. Lots of people just use those generic callsign-and-qso-info cards. Lots of cards don't come with exotic stamps, since they arrived via the manager, or were metered instead of stamped. Still, I come home every day and the first thing I do is check the mailbox for QSL cards. The electronic ones just won't have the same thrill.

I have tried a similar client. I ended up talking to hams in the Middle East and Europe. A friend of mine uses it to keep in touch with friends back home when he is in a country that does not allow non-resients to have licenses. It is amazing how well it works, and fun to work a repeater in strnage lands.

We're talking now. Is this also ham radio? What about if I call you on the phone?

> Maybe if you spent more time communicating
> and less time complaining you wouldnt be so
> negative toward hams who cant get on the ham bands
> and still want to talk to I guess negative nellies like you!

I'm not negative at all and I don't see where it is I am "complaining". If you want to chat on the Internet and call it ham radio, it's your prerogative. I am also living in a CC&R infested condo and can't put up a decent antenna, but I'm not going to pretend that I am operating a radio station while in actuality I only bang the keyboard just like millions of teenagers in chat rooms. It would seem to me that if one wanted to call something "radio" that one would actually have to use the radio. But that's just me.

I am always open to new ideas. However, those ideas also have to make sense and they can't be sold for what they're not. I think it is fairly obvious that ILINK has very little to do with ham radio operating. I would call it a virtual ham radio... maybe. Oh, and I, too think it is an interesting concept. It's just not ham radio.

==>> There you said it: ON4UN! John has got a) the right setup and b) knows how to operate. I think some EU ops tend to forget that the USA window on 40m SSB is way above 7100kc, and there is some nasty broadcast-QRM there. I personally don't do SSB at home and only occasionally work a W or VE on 40m CW, so I don't have to deal with it. But I remember last SSB fieldday (September 2001), there was a PA-station on 40m calling CQ and announcing that he was listening above 7100kHz. It took me a few seconds to figure out why he was doing that (never heard a Stateside station myself that night though). In the mean time I've read ON4UN's book on "Low Band DX'ing", and it can make a difference, hi!
My point being: I think most EU-ops are not well aware of our American friend's 40m-bandplan... Only my opinion.

You got it. There is no way that you can listen to U.S. ham stations on
40 meters over here. Even if I had a beam, which I don't, it would point
directly over southern Europe on the way to the U.S.

Same thing with 75 meters. :-(

I have to agree with you. I am a new ham, probably on the younger end of the curve, manage
an emerging technology and am heavily involved in new cutting edge technology. But, in
this area, I agree physical, hand-signed cards are superior to eQSLs; at least for me anyway.
Not being a fan of eQSL doesn't make one a Luddite.

_____

Great antennas, by the way. I have the 80/40/20/17/12 version and it
works just as advertised, at 1500 watts, with no problem. The perfect
companion to a triband beam. .

Bandwidth is reduced compared to a full size dipole of course, but
efficiency is very good. Took about an hour's tweaking to get the
resonance where I wanted it on all bands

The usual disclaimers apply - just a satisfied customer.

Bill, W7TI

Get all of your dx news via dxer@yahoogroups.com

I.C.P.O. (Islands, Castles & Portable Operations) Listing.
Operations are listed by start date.

02/11/2002: Carsten, DL6LAU, will be active as 3V8SM from Djerba Island
(AF-083), Tunisia February 11th - 18th, including an entry in the ARRL DX CW
Contest (SOAB QRP). QSL via DL6LAU.
02/11/2002: From 11th to 17th February 2002, Six members of the
International Amateur Radio Volunteers (IARV) organization will pay their
visit to the Sahara Desert as part of a technical aid program. They expect
to be permitted to operate amateur radio with individual callsigns of the
format 5T5XXX in Mauritania, as well as S07CRS and S07U in West Sahara. The
operation will be carried out mainly in CW mode, including RTTY. Send your
QSL for the 5T5 operations to each operator's home callsign, and for the
S07CRS and S07U, to JA1UT.
02/11/2002: Mike WA2VUN and Gene K2KJI will be heading for the Grand
Bahamas on Monday February 11th. They will have stations set up in separate
condos. Mike will operate as C6AJF and Gene as C6ALC. This will be a family
vacation so operating time will be limited. Simple wire antennas will be
used and Mike will have a go at 6m with a 6m dipole. QSL home calls direct
or via the bureau.
02/11/2002: Ron/ND5S and Sue/KF5LG will again be active from Dutch St.
Maarten (NA-105) as PJ7/ND5S and PJ7/KF5LG from February 11 - 22nd. Activity
will be on 160-10 meters, CW and RTTY primarily with some SSB. Ron will be
active in the ARRL CW DX Contest SOABLP. Ron states that over 8,000
peri-contest contacts have been made from here in past years. They also plan
to venture to the French side of the island during their stay, and will
operate as FS/home call. QSL via their home callsigns, direct or

bureau.
Ron's web page is at: http://www.qsl.net/nd5s/ .
02/11/2002: Babs, DL7AFS (H44LB), and Lot, DJ7ZG (H44ZG), will fly to Lata
(OC-100), Temotu on 10 February and be active until 2 March as H40T (no
longer H40YL and H40ZG as previously announced). They will be joined by
Stefan, DL2GAC (H44MS) until 24 February. Updates will be posted at
http://www.qsl.net/dl7afs/ . QSL for H40T goes to DL7AFS via the DARC, or
direct to: Baerbel Linge, Eichwaldstr. 86, D-34123 Kassel, Germany.
Remember, that 2 USD or 1 (new IRC) is needed for airmail postage!
02/11/2002: Operators Diemo/DL4LQM, Wolfgang/DL4WG, Thomas/DL5LYM,
Ulf/DL5AXX and Frank/DL8WAA will again go to the Isle of Man (EU-116), and
be active as MD/homecalls between February 11 - 18th. Activity will be
mainly on CW. There will be a M2 or MM entry in the ARRL DX Contest.
02/12/2002: Gary, KI6T, will be active (on 10-40 metres SSB and CW) as
C6AGS from the Bahamas (NA-080) on 12 - 17 February. He will participate in
the ARRL DX CW Contest. QSL via KI6T either direct or through the bureau.
02/12/2002: Look for N8CH Chuck (KG4NW), W4SD OB (KG4SD), W4ZYT Don
(KG4ZK), and KU4EC Gordon to be QRV from Guantanamo Bay, Cuba (NA-015)
February 12th to 19th. They will be active in the ARRL DX CW contest as
KG4DZ. Operation before, and after the contest, will be on all bands CW and
SSB. If you need Guantanamo Bay on any band, e-mail Chuck, N8CH, at
n8ch@qsl.net and set up a sked. QSL routes as follows: KG4DZ via W4SD, KG4NW
via N8CH, KG4SD via W4SD, and KG4ZK via W4ZYT. For additional information
check http://www.qsl.net/n8ch/dxing.htm for updates.
02/12/2002: W0CG, W8AV, W8TK, W9EFL, N8LGP, and N7BG will be QRV from
Curacao (SA-006) February 12th to 19th. They plan to operate in the ARRL
International DX CW contest, Multi Single or Multi-2 category, as PJ2T.
Before, and after the contest, they will be signing PJ2/homecall. QSL
PJ2/homecall's via respective home calls. QSL PJ2T via N9AG.
02/12/2002: Steve, N8LGP (ARLHS member #412), is off to Curacao in the
Netherlands Antilles. He will be there from February 12th through 19th. And,
while there he is going to try and activate NEA-008 Noordpunt Lighthouse.
His trip to Curacao is a working vacation. He is going there to work on the
antenna system for the Caribbean Contesting Consortium (CCC) - PJ2T

http://asgard.kent.edu/ccc/ and to help the CCC with the ARRL International
DX Contest, CW on the 16th and 17th. Steve feels that the 13th or 14th will
be the best time to activate NEA-008. This will be a one time shot. He will
email me as soon as he knows what his plans are and I will get the
information out on the "mailman" as soon as possible. But, if you hear
PJ2/N8LGP on the air, give him a shout, and spot him on the DX cluster and
"mailman". He will be working around the ARLHS frequencies, probably 20
meters. QSL to the home call, either direct or by the buro.
02/12/2002: Ed, N2ED, will be be active as V26EW from Antigua (NA-100)
February 12th to 18th, including an entry in the ARRL CW DX Contest as
V26G.
QSL via N2ED.
02/13/2002: Girts, YL2KL, reports he will be active (on 10-160 metres
mostly CW with some SSB and RTTY) as FG/YL2KL from Guadeloupe between
February 13th and 20th. He will participate in the ARRL DX CW Contest as
either FG5BG or FG/YL8M (SOAB HP). QSL via YL2KL.
02/14/2002: Bill, K1CN, reports he now expects to be signing C6AMM during
his February 14 to March 2 operation from Harbour Island (NA-001),
Bahamas.
His wife Laurel, N1EBL will operate as C6AWW. QSLs via K1CN either direct or
through the bureau.
02/14/2002: Henri, F5DBC, will be active (call unknown) from Les Saintes
(NA-114), Guadeloupe February 14th to 24th. He plans to operate during the
UTC evenings on 20 metres CW and SSB. QSL via F5DBC (Henri Civel, Les Reaux
de Saint Dolay, 56130 La Roche Bernard, France).
02/14/2002: Nobuyuki "Nob", JM1LRQ, will be active as KH0/JM1LRQ from
Saipan Island (OC-086), February 14 - 18th. Activity will be on 160-6 meters
CW/SSB. He will also participate in the ARRL International DX CW Contest as
Single Operator/All Band entry. Nob will concentrate on SSB and the WARC
bands outside of the contest. QSL via the bureau or direct as follows:
Nobuyuki Arai, 5-6-1-1002 Kitayamata, Tsuzuki, Yokohama, 224-0021, Japan.
02/14/2002: Art, N2NB, will be active as VP2MDY from Montserrat (NA-103)
February 14th to 26th. Look for him on 6-160 metres on all modes, PSK31

included. QSL via N2NB.
02/15/2002: Martin G3ZAY, and Dominic, M0BLF, will operate as GJ6UW from
Jersey (EU-013) starting the afternoon of February 15th to the morning of
the 17th. They will be active from a location in the north of the island and
hope to work on all bands from 160 to 10m, SSB and CW. QSL via M0BLF either
direct or through the bureau.
02/15/2002: The lighthouse Expedition to Damba-48 Island by RW4HW, and
others, will take place in the second part of February. Damba-48 Island is a
NEW ONE for RRA and WLHA LH 0551. QSL via RW4HW.
02/16/2002: PT2GTI (Stucket), PT2HF (Lunkes), and PP2RON (Ron) will be
active (on 10-80 metres CW and SSB) as PW6AI from Abrolhos Archipelago
(SA-019, WLH LH-0463, ARLHS: BRA 001, DIB 12, DFB BA-14) between February
16th and 22nd. Frequencies: SSB - 50105, 28460, 21260, 14260, 7055 and 3755
kHz; CW - 50105, 28040, 21040, 14040, 7025 and 3530 kHz. QSL via PT2GTI
(Roberto F. Stuckert, Shin QI 07, Conj. 12, Casa 14, 71515-120, Brasilia DF,
Brazil).
02/16/2002: The Las Tunas Contest Crew, T48K, will be active from Cuba
(NA-015) during the ARRL International DX CW Contest (February 16-17) as a
Multi-Single category. The operators will be: Josy/CO8JY, Doug/CO8DM,
Geo/CO2JZ and Raul/CO8ZZ. QSL via DK1WI.
02/16/2002: A second operation from Santa Maria Island (SA-070) is being
planned to take place between 16/17 and 20 February. QSL via XQ5SM.
02/17/2002: Henry/TI2HMG along with others will be active as TI9M from
Cocos Island (NA-012) February 17 through March 4, 2002. The TI9M DXpedition
team includes TI2HMG, AD6E, AK0A, F5CWU, KA0KKO, KI7WO, N4CD, N6KT, N7DF,
PA3EWP, PA5ET, RA9CO, RN3BZ, WS4Y and IZ7ATN.Activity will be on 160-6
meters including the WARC bands on CW/SSB/RTTY. They will run 5 operating
stations located in Chatham Bay. Each operating position also needs to have
a PC for logging purposes. One of the five stations will be working in RTTY
operation and for 6m needs. Another station on the ship will run in 6m
beacon mode. Two aditional transceivers will be available as a back-up
radios for any of the operating positions. QSL via: AK0A (Bill Boeckenhaupt,
8904 Westbrooke Dr, Overland Park, KS 66212, USA). Further information

can
be found on their web site at http://www.qsl.net/ti9m/ .
02/18/2002: The operator team has been finalized and now includes
Andre
PY0FF, Rolf PY1RO, Peter PY5CC, Herminio PY5HSD, Eliso PT7BZ, Jim
PY7XC,
Ciro PY7ZY, Fred PY7ZZ, Dick N6FF, and Bill W9VA. Andy W6/G4VPM has
joined
the Support Team serving as the administrator of the DXpedition
on-line log
posting process. The team will have satellite telepone service
available to
them, thanks to Inpar to facilitate regular transfer of log
information to
Andy. The operators will gather on the naval base in Rio de Janeiro on
February 14, spending their last night in Brazil aboard the vessel
prior to
the scheduled departure the following morning. They expect to be QRV
as PW0T
in the late hours of the 18th and to operate 24 hours a day (on 160-6
metres
CW, SSB, RTTY, PSK31, and SSTV) with as many as four stations until 2
March.
The Chief Pilot will be Rod, WC7N (wc7n@gb.wave.net); the pilot
stations for
Asia and the Pacific will be Toshi, JA1ELY and Duncan, ZL3JT
respectively.
QSL manager is Steve KU9C. The DXpedition website
http://www.trindade2002.com is up with new information being added
daily.
Abbreviated versions of the
website are available in French and Japanese thanks to the efforts of
Jean-Louis F5UJK and Toshi JA1ELY.
uestions may be directed to Dennis K7BV k7bv@aol.com or Oms PY5EG.
02/19/2002: Michel, F6COW, and Dominique, F6EPY, will be active
(mostly on
CW, with an emphasis on Europe on 12, 17, 30, 40 and 80 metres) from
Upolu,
Western Samoa as 5W0MP (QSL via F6COW) and 5W0DA (QSL via F6EPY)
between
February 19th and 28th. They will have two stations with two
amplifiers;
suggested frequencies are 3515, 7015, 10115, 14015, 18095, 21015,
24905,
28015, 50085 kHz (CW); 7035, 10145, 14085, 21085, 28085 kHz (digital
modes);
3780, 7075, 14215, 18135, 21215, 24985, 28465, 50125 kHz (SSB). The
web site
for the operations is at http://perso.wanadoo.fr/dominique.auprince/ .
02/19/2002: Look for Jean Marc to be QRV from Martinique Island

(NA-107),
as FM/F5SGI, from February 19th to March 2nd, 2002. He will be active
on HF
bands mostly in CW. On the way he will also try to operate, mostly in
CW,
from FM5CW's and FM5FA's stations. QSL via REF bureau or direct CBA.
02/23/2002: Joaquim, PS7JN, reports he is due to leave Natal on 20
February
to carry out a research programme in geology at St. Peter and St. Paul
Archipelago (SA-014). He will be there from 23/25 February through
10/12
March and he plans to be active again as ZY0SAT in his spare time
(typically
during his nights) with 10-50 watts and a multiband dipole on +/-
7060,
14250, 21350 and 28600 kHz. QSL via PS7JN (Joaquim das Virgens Neto,
Rua
Carlos Serrano 1969, 59076-740 Natal RN, Brazil). A web page is under
construction at http://www.geocities.com/dasvirgens/aspsp/dxspsp.html
(the
English version will be available soon).
02/24/2002: Bill, W8EB and his wife, Dorothy, W8DVC will be active
from St.
Maarten between 24 February and 17 March. Bob, K8RLM and his wife,
Lori,
W9MSU will join them the first week of March. Bob and Bill will
participate
in the ARRL DX SSB Contest (2-3 March) as PJ7B (QSL via W8EB), while
the
rest of the time they will operate as PJ7/homecalls on all bands (6
metres
included) CW, SSB and RTTY.
02/25/2002: Leo, W3LEO, will once again be active from Portpatrick in
southwest Scotland (EU-005) from about February 25th through March
28th. His
callsign will be MM0LEO, and he plans to be in the ARRL International
DX SSB
Contest. He will use an Icom 706 (100 watts]), an R-5 vertical [10,
12, 15,
17, 20 meters], and a 40-meter dipole [in inverted-V configuration].
QSL via
W3LEO. Reference Numbers are: Grid Square - IO-74ku; Worked All
Britain
[WAB] Square - NW-95; CQ Zone - 14; ITU Zone - 27 and IOTA - EU-005
[Great
Britain]. LEO'S ADDED NOTES: The nearby pub is only about 35 or so
steps
from the front door of the cottage. Some URLs to check: Moir Cottage
[MM0LEO's QTH]: http://www.moir-cottage.co.uk/ and Harbour House [the
pub's

location]: http://www.harbourhouse.co.uk/ .
02/27/2002: Larry, K6RO and Ron, W6UL will be active (mainly on the WARC
bands and 160 metres SSB and CW) from Curacao (SA-006) between 27 February
and 5 March. Larry will participate in the ARRL DX SSB Contest (2-3 March)
as PJ2K (SOAB HP) while Ron will be signing PJ2/W6UL before and after the
contest. QSL via KU9C.
02/27/2002: Mike, GM0HCQ, will be QRV from the South Atlantic. His
itinerary will include South Georgia (AN-007), and Signy Island in the South
Orkneys (AN-008). Operations are expected as follows: 27 Feb - 02 Mar 2002
VP8SIG (So. Orkneys); 04 - 06 Mar 2002 VP8SGK (So. Georgia). Updates will be
posted on http://www.qsl.net/gm0hcq/ .
02/28/2002: Bernard, DL2GAC move to Port Moresby February 26th or 27th, and
the following day to Kavieng (New Ireland, OC-008), from where he will try
to go and operate as P29VMS from the Tabar Islands (OC-099), Feni Islands
(OC-101), Tanga Islands (OC-102), St. Matthias group (OC-103), Buka Island
(OC-135) and the Green Islands (OC-231) until 23 March. On 24 March he will
fly back to Honiara. QSL via DL2GAC.

Hello Ian,
if you really do think that "real cards beat electronic cards any day of the week" then you really should stick with what you call "real cards". No one is forcing anybody to go with eQSL's

However I find the eQSL method to be much faster, much simpler, much cheaper, and a lot more fun. I have dealt with many "real cards" in my awards pursuits and in many instances had to spend "real money" in a losing effort that never yielded a card at all. I couldn't even get a qsl card from Mexico after 3 attempts each time with $$$ enclosed and SAE's. Finally the op there I was trying to get a card from emailed me and admitted the postal system was "wise" to the "real card" qsl game and was stealing from Hams all the time. With eQSL's I can "just say no" to unethical foreign postal workers once and for all.

I never liked the fact that to get a qso "confirmed" for an award had more to do with things completely out of my control (like postal workers stealing, and bad postal deliveries around the world, and DX ops that are in it for $$$ only) then it had to do with my station's performance level and / or my skill as an operator.

Furthermore I can get a DXCC credited qsl card (via eQSL) in a couple days for any - and - all qso's I make..even to the rarest-of-the-rare DXCC entities. This is the "new way" and the "much improved and long over-due better way". I am 100% on-board with eQSL and have been for months...it is fun and easy and it guarantees I get a card for my efforts and I don't have to depend on outside sources in foreign countries to cooperate so that I get the confirmation I am entitled to.

Those are my feelings.....maybe catch you on the bands one-of-these-days....

Well, there is also the QSL bureau. OK, it can be very slow,
but it can be a way around many of the problems with postal services.
Of course, it isn't perfect. eQSL isn't, either. For instance, they
still haven't found a way to properly deal with portable operations
if one operates from more than one location. It may be fine for the
"sitting-at-home" ham, but not for those who try another hilltop every
few weekends ...

73, Jan-Martin

PS: I've deleted the equipment and antenna group from the distribution list.

583. Have Any of You Ever Heard LDE's ??

Newsgroup: rec.radio.amateur.dx

Greetings,

Just curious and I hope that it's not too off-topic.
But I'd like to know if anyone hear has ever actually heard LDE's
or Long-Delayed Echoes ? What is the current thinking on the cause?
Best freqs. to hear them ? Apologize to any who feel I'm wasting
bandwidth, but not sure where in Ham Radio ng-land this would be
on-topic..

Thx. es 73 de KG4JBM/ Andrew

Well, I'm glad to see, at long last, an open admission that it's a way
of funding a free vacation for "the deserving"!

Hi Andrew!

If you looked in deja-news, you would find some previous information
about this. However, here is a re-post of the most recent
correspondence. I don't think anyone has ever come up with a proven
explanation. There have been additional claims that echoes have been
heard *much* more than a few seconds later, but I have never
experienced that phenomenon myself.

>at night on 20 meters and I have heard others describe the same.

This is correct. I have also experienced this effect ... only once in
over 40 years on the air. It happened at about 0915 UTC one winter
morning in 1966 on 21 MHz SSB, when I was operating the London Science
Museum station GB2SM. The beam heading was just east of north (I
guess about 15 degrees) and the output power was 400 watts PEP. The
band was open to VK and ZL via the short (polar) path. I began to
observe echoes of my own signal at the end of each transmission,
delayed by just over a second and audible at good strength. The delay
was long enough to say "Hello", allow the VOX to drop, the hear the
complete word "Hello" come back. I tried sending single characters on
CW, with the same result. There was no significant doppler shift of
frequency. The effect persisted for about 3 or 4 minutes, then the
echoes quickly faded and disappeared.

A very strange effect. The delay on the echoes was far too long to be
explained by a single round-the-world path. (At about 1.25 seconds,

it was almost half the delay typical of earth-moon-earth echoes over a 480,000 mile round-trip path!) I have always believed the signal somehow got trapped between two ionospheric layers at high altitude and experienced multiple reflections between the layers until eventually being released after more than a second's delay. However, that theory remains unproven. It seems to be a very rare phenomenon, but has been witnessed and documented by several observers over the years.

There have even been suggestions that the high-power "Woodpecker" over-the-horizon radar in use by the Soviet Union at the time had something to do with it ... possibly by causing some kind of ionospheric "heating". Who knows!

Hi all:

After reading this thread for awhile, I went to the ARRL web site, and did a search on "eqsl", "e-qsl" etc. and I found a few mentions of e-qsl, but nothing that mentions that the ARRL is doing anything but thinking about accepting e-qsl's. So is this really true or is someone reading more into ARRL thinking about it than has happened yet.

Hello John,
The real-low-down-skinny is that eQSL confirmations are now accepted at the ARRL - DXCC desk provided the eQSL web site "mail-a-card" service is used. Basically this way eQSL becomes a sort of qsl manager by verifying logs from both parties of a qso and then mailing out the card. This has never before been done and thus it is a '" news-item " for all DXers that prefer the economy, speed, ease, and fun of electronic qsl'ing. Statements to this affect are plastered all over the eQSL website including a copy of the email from Bill Moore at the DXCCC desk verifying that eQSL cards handled in this manner would be valid for DXCC.
It can be seen by some that this is a new approval, and a change in policy, by the ARRL since no electronic qsl cards of any type have ever been "accepted" before for anyone under any conditions. But..also since the ARRL is only accepting eQSL cards that have been mailed others can say there is no ARRL policy change as they are "still accepting" mailed cards. It can go either way.... Personally since nothing like this (electronically derived qsl cards) has ever been "approved" for DXCC before I see it as a "change in policy" by the ARRL.
Others disagree....be that as it may there is no argument that this is a real shot-in-the-arm for eQSL users and will very likely spin-off as more participation in the DXCC awards program to the benefit of the ARRL since only it's members are eligible for their own brand of awards. I see it as a win-win situation.....and..it most definitely is "something new" IMHO....

Chalk-up another acceptance for eQSL's......

Confirmation was received today from the president-elect of the
3905 Century Club that their awards program will accept hard copies
of eQSL's as confirmation. The hard copy can be printed by the
recipient on his home computer if desired, or you can use eQSL's service
to have them printed and mailed to you.

Either is OK for Century Club awards.

The folks at eQSL solved two problems. Firstly they found a way to make their record keeping system of some value to some people. Without the document being submitable for credit, few people wanted them. They're too easy to counterfeit on the computer. Secondly, they found a way to make some money. By charging a dollar and then sending the card out at the postal card rate of 22? cents, finally they are in the black. Amateurs have been creating and mailing out electronically created cards for years. There is nothing new at all there except the process perhaps of 'ordering' the card on-line.

There was a charter that was written when the newsgroup was formed back in
1996. I was the one that pushed it through the complicated usenet "big
eight" voting procedures, though the charter was largely written by others.
It's pretty generic and I append it below:

RATIONALE: rec.radio.amateur.dx

One of the many activities enjoyed by amateur radio operators
("hams") is "DXing", the pursuit of making contact with as many
countries as possible. As used in this sense, a "country" might be
anything from a traditional geopolitical entity to a remote,
uninhabited island or coral shoal to which hams venture for the sole
purpose of "putting it on the air." The term "DX", apparently
derived from the word distance, can be traced to the earliest days
of amateur radio experimentation. Today, the term is universally
understood by amateur radio enthusiasts. A significant number
of the several million licensed amateur radio operators worldwide
characterize themselves as "DXers". Annual surveys identify the
rarest DX countries (i.e., those with which the fewest hams have
made contact), and each year a number of these are visited for
anywhere from a few days to several weeks by groups of hams. Often
these "DXpeditions" are multinational undertakings conducted by the
very best amateur radio operators in the world.

Existing moderated and unmoderated e-mail reflectors are dedicated
to DX topics, but many hams have indicated that they prefer
discussing DX on Usenet rather than have their mailboxes fill with
reflected mail. DX discussion on Usenet generally occurs in
"rec.radio.amateur.misc". Amateur radio is an extremely multi-

faceted avocation, however, and the wide range of topics discussed in this newsgroup sometimes makes it difficult for individuals interested primarily or exclusively in DX to easily identify articles of interest to them. This problem can be further complicated by the volume of traffic in this newsgroup and the short expiration periods on many news servers. It is for these reasons that a new newsgroup devoted exclusively to DXing is being proposed. Since DX news is often of timely value, this new newsgroup is meant to compliment, not replace, the mail reflectors, which often get messages to their destinations more quickly than news articles propagating through Usenet.

CHARTER: rec.radio.amateur.dx

The purpose of the "rec.radio.amateur.dx" newsgroup is to provide an unmoderated forum for the discussion of topics of general interest to DXers, including but not limited to:

o announcements of and invitations to join upcoming DXpeditions;

o information about QSL routes;

o tips and techniques regarding good operating practices;

o solicitations for schedules that will enable new DXers to get the last few "new ones" needed to qualify for DXCC;

o periodic postings of data files, such as the DXCC countries list, great circle coordinates used to determine beam headings, etc.;

o administrative policies and practices pertinent to DX operations, such as gaining recognition for a DXpedition by national societies, adding new countries to the DXCC countries list, etc.;

o the general joys and sorrows of participation in or making contact with a DXpedition.

Although the term "DX" is usually used in reference to global communications on the HF bands, operators who use other modes have different applications of this term. This is especially true of VHF and UHF operators, for whom a contact of only 1000 or even 100 miles might well be considered DX depending on the band in which the contact is made. There is currently no newsgroup dedicated to these operators. Although the majority of the traffic on "rec.radio.amateur.dx" is expected to concern HF DXing, proponents of the higher bands are welcome to use "rec.radio.amateur.dx" as a forum in which to discuss their DX activities and, if fact, are encouraged to do so.

Postings that would be considered inappropriate for this newsgroup are those whose topic falls more naturally under the charter of some other newsgroup in the "rec.radio.amateur" hierarchy. For example, discussion of radios used by DXers would be more appropriately posted

to the "rec.radio.amateur.equipment" newsgroup. Similarly, general discussion of beam antennas typically used by DXers would be more appropriately posted to the "rec.radio.amateur.antenna" newsgroup.

END CHARTER.

Proponent: Richard Eckman, KO4MR ko4mr@arrl.net
Mentor: Jonathan Grobe
Votetaker: Jani Patokallio

> DXCC.

However, if the sender of the QSL card objects to having Eqsls act as a
"qsl manager", they can notify the Eqsl and the DXCC desk
and then the cards will not be accepted for DXCC credit.

I have noticed a number of people requesting that their logs be
"returned" as they do not want Eqsl acting in this capacity. The prime
reason given is that the logs were sent with the understanding that no
money was needed (other than a donation. Now Eqsl wants to charge for a
contact (which is fine, I guess). but they "object" to having Eqsl
represent itself as a qsl manager for them without 1st asking.

Additionally, there is now the problem for those subscribing as to logs
from non legitimate managers and / or pirate operations being submitted.
How does Eqsl plan to handle types like HH2HM, who are notorious for not
only being the DX but also pretending to being the manager for same.
Nothing he manages counts for anything unless the legitimate operator
verifies this.

Lots a holes still. Although progress none the less..I guess

> It can be seen by some that this is a new approval, and a change in

No, the ARRL is accepting QSL cards that have been approved by a quasi
qsl manager. This is not a change, as much as you would want it to be,
as it seems you posted substantial pieces of the pie, but not the whole

thing. Wayne clarified the ARRL/DXCC position on the 4 reflectors you spammed to and you still chose to ignore the complete picture.

It's more of a clarification as to acceptance of QSL from a qsl manager than a complete policy change... sorry Charlie ;-)

I will agree with most of this. I really doubt that the big time DX will e-qsl (maybe some ex-quam types for instance... Hi Jim!!!)) but for the most part, it seems cards are your basic DX varieties (Europeans, S. Americans, etc)

I still see no value to their 'record keeping system'. If
p50dx@yahoo.com uploads his logs are they going to start passing
out P50 cards for a buck a piece ?

I uploaded a thousand club call contacts to eQSL a long time ago.
They have never attempted to verify the validity of the fact that the
call even exists, more less that the logs were valid, nor ask for any
proof that I had the authority to upload them.

> Secondly, they found a way to make some money.

That's the only reason eQSL exists in the first place.......

I wouldn't neccessarily classify that as 'spooky'... Many times from
Guam, on HF, I could hear another Guam station along with a delayed
version (fluttery) of the same signal a second or so later. Just the
signal going all the way around the world and coming back again....

Hey Bernie !! You FINALY found USENET ??

There's lots of rules, for evey newsgroup. Only two problems:

1. Nobody cares.
2. Nobody enforces them.

Hello John,
Did you visit the eQSL web site and read the email from Bill Moore of the DXCC Desk? I cannot speak for why the ARRL webmaster does or does not place what many believe to be important "news" on that site. You might consider emailing them. I would like to see their reply posted here.

My personal opinion is that they are reluctant to possibly steer anyone over to eQSL services since they (the ARRL) are going to launch the Electronic Logbook of the World ....one of these days.
It will supposedly provide for a 100% all-electronic qsl confirmation system that would feed directly into their own awards programs that would not require any paper-based qsl cards at all. However it looks like eQSL has done the end-around now by obtaining the "go-ahead" from Bill Moore himself that basically "allows" electronic eQSL's to be "accepted" for DXCC awards.

The eQSL system has many advantages over the yet-to-be-released Logbook of the World. With the LBOTW, once released and in operation, past qso's are not accepted. Not so with eQSL Furthermore....there will need to be digital signatures acquired and approved , as well as new additional ARRL fees (according to ARRL), and special ARRL- LBOTW software will need to be purchased or existing logging software will need to be upgraded (at a cost) to interface with the LBOTW system. There will need to spend $$$ spent and numerous hoops jumped through just to get only your recent qso's accredited. And of course don't forget you'll need to pay ARRL dues too....

None of this nonsense is required with eQSL.....they really have a better way and it shows already with the upsurge of acceptance (or call it usability) by various Ham Radio awards organizations. I don't chase awards anymore except for my own satisfaction and for ego-motivated "bragging rights" but I have to say I really get a kick out of the easy and automated way eQSL allows me to provide confirmations for any station I qso with...and now they are DXCC accepted too.....where is the down-side? I don't see it......

Hi there Jimbo....
I wondered where you had gone....well as usual you are not looking at the silver-lining Jim. The eQSL "mail-a-card" service (which has recently been OK'd for DXCC) still puts $$$ in the mailman's pocket when eQSL sends out the cards through (that's right) the USPS.

And so now your point would be what exactly?

I'm going to break it you easy as I can sunshine......eQSL is getting stronger, more widely accepted, certainly more widely used every day. Moreover eQSL is saving Ham's $$$, time, frustration, and $$$ pilfering by unethical foreign postal workers - and - no-good DX op's that collect $$$ for 1000's of cards but send out only a couple dozen confirmations a year....just enough to keep the "believers" sending in that money....you know that Jim.....

Now..is that the way you prefer?
Thanks for posting....

AB7SL sez:

>>I really get a kick out of the easy and automated way eQSL allows
>>me to provide confirmations for any station I qso with...

Any station?? You only have QSOs with people who send their logs
to e-QSL?

Does this place send hard copies of cards to non-US requesters for $1?

I don't see any difference between this and sending an SASE to the US
QSL manager, where there is one, except that you don't need to spend
a buck, it's just 2x34c stamps.

The real change will come when the DXCC folks accept e-mail versions
of cards, without a middle man, be it a QSL manager or the e-QSL guys
who send you a hard copy.

Oh well, whatever turns you on, lad -

Hello Jim,
Man...you really don't know what the hell you're talking about (on most topics) but especially on eQSL. What would prevent p50dx@yahoo.com from "uploading his logs" and then having eQSL start "passing them out for a buck a piece" is the eQSL Authenticity Guarantee mechanism at eQSL. It requires a scanned image of the Ham's license be submitted beforehand.

Now before you start with how any system can be "tricked" or cards and licenses could be "faked" also recognize that most honest-hearted Ham's have no interest in ill-gotten "awards". Honesty and integrity cannot be legislated or enforced on anyone. Doing the right thing will always be optional.

Furthermore the odds of a convincing license forgery are miniscule at best. Most government authorities have selected a paper stock that would be very difficult to duplicate by amateurs. Take a look at - your - ticket Jim....are you going to be able to duplicate that exactly?

Still nothing is perfect.....I am sure that literally thousands of bogus and forged "real qsl cards" have been used for awards for a long time. In addition it is just a hobby award Jim....we are not dealing with the CIA or the Ft. Knox Federal Reserve.

Lastly if a few butt-holes do manage some way to "cheat" they are only cheating themselves. It would take nothing at all away from any awards you are I or anyone else legitimately obtained.

Maybe see you on-the-bands one of these days....

I believe I've heard LDEs on 40M. I was a newly licensed novice back in 1974 and was listening to CHU late one winter night on 7.335 MHz on an old Hallicrafters SX-99. (This was the receiver that featured remote tuning on 15M - one could QSY from the CW portion of the band to the phone portion simply by banging on the table. But I digress.) I noticed that the signal from CHU sounded "strange" but I couldn't put my finger on it. Further listening revealed a double announcement of the time delayed by more than 10 seconds, and again something like 10 seconds after that. I heard it twice, and went away convinced that something was wrong at CHU. Some years later I read a similar account in an old (1957) issue of QST and came to believe that I had heard a genuine LDE.

Hello Derek,
I can provide a confirming qsl to - any - station I work just as I
posted.

They do - not - have to register with eQSL at all to retrieve my card.
Just drop by the website and grab it....

Of course for mail going outside the USA eQSL will have to charge
slightly more as is posted on their site. That is simple common sense
when it comes to mailing anything in this world. Still even so it is
faster, cheaper, safer, and a whole lot more fun with eQSL....

Rodger, rodger on the google search. Lots of hits as I knew when I posted. My goal was to try and sample the group's opinion and hopefully run into a Ham who'd experienced it.

My favorite explanation is the "Cosmic Repeater" offered here for kicks. The idea is if you're an alien civilization what do you do if you get a transmission; you might not be able to decipher and respond intelligibly. So instead you set up the Cosmic Repeater that will sample anything that bounces off it, copy same, and bounce it right back in direction recieved. Thereby letting you know you got something without "fancy" crypto-type decoding.

Tropospheric ducting seems like a good idea, but I'm told that it could be argued that if ducting was this good you'd be working transatlantic on a H.T. I don't do FM, so I can't comment. I'm aware there are other more esoteric explanations involving "ion waves" or such.

Jim, I'm not talking down to anyone, but I'm not sure you understood; LDE's are much different from Long Path (whether once or twice -wink).

My personal pet theory would involve something like a portion of the signal that is "lost" to space is actually trapped in the magnetosphere and is somehow returned. Sort of a gigantic E-M loop effect. The reason why everyone else wouldn't lite up and say, LDE, is because only the active QSO'ers would recognize it as such. Other Hams would just consider it random QRM-crap that we all hear all the time anyway.

Andrew

>So it goes around twice? All away around and then all the way back?

No, not twice, but I guess that's possible. I hear the Guam station
on ground wave. Then I hear the same thing delayed when his
signal comes back from a round trip......

During a contest one year, a station who was about 11 miles away
from me was MUCH stronger when I pointed the antenna the
opposite direction his was, i.e, he was beaming EU and I was
beaming EU LP. A full trip around the earth, minus 11 miles. If I
beamed at him, I could hear a definite echo......

Somebody else said the same thing - they heard themself delayed a
second or so, probably on the back of the antenna after their signal
had made one round trip.

I guess if you did the math, it wouldn't really take a full second for
a radio wave to go around the world once, but when you're listening,
the delay is very obvious.

I'm sure we've all heard long path signals, where you can hear the
station short path (weak with, and 'echo') and then when you point
the beam LP, the signal is strong enuff to cover up the weak SP
signal so the echo goes away.

Not sure what the definition of LONG is in LDE, but I think it's more
than a second........

As usual the skeptics are out in force.. but they'll come around oneday--
10.3 million qsl on line can't me Eqsl is doing poorly.. they don't require
any donation if you don't want to give one.. so it's not a money earning
scheme like some on here have suggested.. I for one think it is a breath of
freash are in Qsl my Qsl ratio to qsos with dx stations has gone up 100
percent using eqsl. And I don't have to wait two or maybe three years for
the buro! Also if you don't for whatever reason want to join the Arrl , try
sending your cards via their outgoing Buro..

The Time for Eqsl has arrive. and it's working very well. Trust in the
future more and more award committees see it as a viable way to exchange
confirmations for awards.

Just my two cents worth now will get off my soap box..

(I'm in no way conected with eqsl other than a happy user of their system.)
73 Dave KC1DI // always qrp// qrp Dxcc 125 all 30 Meters.

3905 Century Club is an United States based net with session on 160, 80 and 40 meters SSB, 80 and 40 meter CW and several digital modes on 80, 40 and 20 meters. They offer awards to participants and, more importantly to this discussion, is a 25 year old organization. The FCC thinks they are for real as several 1x1 special event calls have been issued to them in honor (honour) of this anniversary. The president elect happens to be a ethical ham.

I'm not sure why you think it necessary to cast aspersions on this organization. (No, I am not a member; yes, I have participated in their nets on occasion).

They're working on something called "Logbook of the World". I've not seen
any details yet. It looks like a similar plan to eQSL's, but different.
You might find it mentioned as "LOTW" on search engines.

I understand what Jim is saying about hearing another station with an echo but the LDE I heard was my own station coming back more than a second later. Since radio travels at 186,000 miles per second, that would require six trips around the globe for a one-second delay. And since the signal passed you five or six times you might hear the other echos as well. I haven't seem anyone report a stutter effect.

It is different. The eQSL plan is for the guy who runs the web site to
get your money instead of the mailman. The Logbook of the World plan
is for the ARRL to get your money instead of the mailman......

Both good plans. Especially with so many bored hams just waiting to
sign up......

You should have little problem receiving the staion on 92.9 with a good selective radio on fm. What is the output power of this station that is 60 miles away? Can you receive this staion on your Car radio? Most case I have found that if I can't hear the station in my car when driving around locally than I probably won't have too much luck receiving it with any setup.

I have a Panasonic RF-2200 that is well known for its am performance but is also excellent on FM.

With my RF-2200 and a simple dipole antenna I can litsen to a station on 95.5 (WKYE) from my hometown that is 160 milles away from where I currently live (York, PA). I have no problems with a strong local station on 96.1 and 94.5. I am even able to null out two other stations on the same frequency (WPGC in Washington DC and a station in in NYC)

You may also want to try the Tivoli Audio Model One radio. I have not used this radio but I hear it is one of the best as far as selectivity and sensitivity for a portable tabletop radio. Here's the link http://www.tivoliaudio.com/ This radio has a 75 ohm external antenna connection but it does kind of look like something from the 50's.

Good luck,

Joe Esposito

|Guam, on HF, I could hear another Guam station along with a delayed
|version (fluttery) of the same signal a second or so later. Just the
|signal going all the way around the world and coming back again....

Speaking of "spooky"...

I was once on 2 meters beaming west (from Tucson) toward the moon when I heard a station calling CQ. I immediately identified W5UN (in TX) but then slightly off his frequency I heard another station calling CQ. To make a long story shorter, the second station was also W5UN.

I was apparently hearing him on some type of backscatter as well as hearing his moon echo. The doppler shift and time delay of the "long path" moon echo produced a signal with different timing and frequency than the "short" scatter path. He was QRMing himself <g>.

Hi Charles,

I find this a curious form of touting advances in e-anything only to
reveal the ignorance of e-security. In other words, if it is such a
good idea, why wasn't it fully thought through?

The issue of faking anything is resolved through electronic
signatures, not photocopies of licenses. Honesty and integrity need
not be tested when solutions are available to answer that now.

The ARRL is hardly the bastion of new concepts. It is obvious that if
they were, they would be the repository for Digital Certificates in
this matter and others. Instead of being ahead of the curve, they
fall far behind the electronic signature bill signed by Clinton (this
serves to illustrate the severe time lag - nigh on to two years).
Unfortunately this also illustrates the gerontocracy that seems to
have ossified the organization.

Hello Richard,
How much "security" is really needed for a "hobby awards" program anyway? The eQSL Authenticity Guarantee is quite adequate security for the job of administering "hobby awards"

After all what would - your - damages be if someone cheated their way to DXCC Honor Roll? It sure wouldn't affect my DX credentials..how about yours?

Any and all security measures of any kind can and usually do get reverse-engineered or circumvented in some way. Just look at the software industries decades-long battle with piracy. No more than do they have a new protection scheme than 2 days later the "crack" for it is posted world-wide on the internet.

eQSL security is just right for "hobby awards" and believe me folks...Ham Radio Awards - and - DX are just hobbies....

Hello Edward,
It was V73UG - not - V73UV. Furthermore checking for V73UV spots at:
http://oh2w.kolumbus.com/dxs/qin.html shows no spots or any references
whatsoever
for that call (V73UV) at anytime in 2002.

642. Email from ARRL - President about eQSL's

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-14 21:24:12 UTC
From: Charles Johnston <ctj92@cableone.net>
Message-ID: <3c6c2afa$1@news.bnb-lp.com>
Source record: 14468
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment

Hello interested Hams...

I have had some interesting, courteous, and informative emails with the ARRL president Jim Haynie, W5JBP concerning the recent flap about eQSL acceptance for DXCC.

Jim was also nice enough to forward to me in-house ARRL email from Bill Moore to Jim which goes a long way to further explain the likelihood of eqSL cards being accepted for DXCC as eQSL web site now states. Jim has asked me not to include the actual verbatim email from Bill..but has encouraged me to post "just the facts as Bill has laid them out" (Jim's words to me) .... and so to the best of my abilities I'll do that now....if you want to skip ahead I can tell you it still looks like eQSL cards can be and will be accepted by the ARRL as long as some important steps are taken....

Here are cut and paste excerpts from Bill's email to Jim....
---
1. It seems people have not read the entire message, especially the part that says "acting as QSL manager". On his site I see where he has OK for sending e-QSLs, not paper QSLs.In
order for us to accept anything from him we would need a letter from each
station he "manages" authorizing this

2. Then, we'd need something better than his word that he is verifying logs each time a request comes in (something we do not think he will be willing to do with all the stations he has logs
for).

3. The requesting station must send information listing the specific QSL information then the
manager must check the log for it. I believe the term for not doing this is
pre-emptive QSLing.

4. As I have mentioned to all who have written, that ARRL has not changed its
policy in any way regarding electronic QSLs.

You are probably correct, but very presumptious in thinking that because there
were no spots, the station couldn't have possibly been QRV.

I'm on the air almost every day and I doubt that I've ever been "spotted."

Some of us just slink around unnoticed and pounce on the DX..like YA5T this
morning <g>.

Bob meet Leonard H Anderson Len meet Bob. The two of you should be shut in a dark room and beat each other. I thought Len topped the cake when he trivialized the 911 events, but Bob you take a close 2nd. Back in the 80's several amateurs did die will going on a DXpedition. If memory serves, they were shot during a dispute between Taiwan and China over some piece of coral reef. They were in the wrong place at the wrong time But of course, you'd have known that if you bothered to look into the situation before proving to the NG's that you and the West Coast wacko are cut from the same piece of stank cloth. :(

No cheers or regards for you either

>I have sent several QSL's with SASE's and "donations" to his manager
>since last spring. So far, I have received no QSL's, no "Not In Log"'s,
>no anything. Maybe direct would work....

You sound like the fellow who sent me an envelope with "5TH REQUEST!!!"
on the outside. He only ever sent two and I had already replied to the
first one.

If you have a callsign, let me know and I'll see what happened to your
card(s).

And no, direct would not work. I've sent out thousands of 9V1YC cards.
and I have a backlog because HC8N made 40,000+ QSOs in late November.
Do what I suggested to the last person who asked about this, and if
and when I find your other card(s) I'll return your "donations".

Tsk, tsk. You guys are so cruel. I am a proud member of the 3905CC and I think it's the best thing going on 75M period. I mean compared to what? Sometimes it seems that there's just something about 75/80M that attracts ever ornery, country-fied, probably alcoholic Ham ever born. And there's more deliberate QRM on 75 than anywhere else.

If you're againest nets okay, but how long would it take you to get a 50 state WAS 80M SSB only otherwise ? Gud Luck. I'm not bragging 'cause I'm relatively new and not a DX'er, but in 5 months I have confirmed WAS, including HI., Alaska twice, Yukon Terr. twice as well as half the VE's, and some Carrib. and central America. My QTH is in VA. I'm sure lots of you guys can brag better than me, the point is that you ain't gonna get that on 75/80M talking to Billy Bag o'Dognuts and his TN trio. Different strokes for diferrent folks I guess. I'm glad they're there.

Amateur Radio Newsline Report 1279 – February 15, 2002

Amateur Radio Newsline report number 1279 with a release date of
Friday, February 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio helps in the face of a California wildfire and an appeals court says that pirate broadcasters cannot be banned from getting FCC licenses. These stories are first on Amateur Radio Newsline report number 1279 coming your war right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS AID AT FALLBROOK CA. FIRE

Ham radio was on the scene as a wind-whipped fire raced through the remote north-western portion of Fallbrook California on Sunday February 10th. Sixteen homes were destroyed along with one sheriff's vehicle and two fire trucks. Among the houses that suffered damage was that of Grammy winner Rita Coolidge. An estimate 2600 acres were burned as this report is being prepared. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--
According to Bob Gonsett, W6VR, Amateur radio operators were more than ready when the emergency the emergency hit. And so was their local repeater system:

--
W6VR: “We have two repeater systems that are tied together on Red Mountain that serve Fallbrook and Fallbrook is fortunately a hotbed of Amateur Radio activity. Lots of logistics communications took place in support of Red Cross activities, animal evacuations, people evacuations and it was a very, very busy repeater system which, incidentally, is backed up by emergency power.”

--

Gonsett, who is editor of the CGC Communicator broadcast industry newsletter says that hams were posted at key points in the community. This included the fire department, the sheriffs department, the hospital and the evacuation centers. Some hams provided mobile communications for animal rescue operations. Others, who specialize in evacuation matters and health and welfare traffic worked in conjunction with the American Red Cross to provide support. W6VR says that it was just about a textbook ham radio communications effort for both people and equipment.

--
W6VR: “Their performance was outstanding in every respect. The repeaters worked flawlessly. There was no jamming. The greater community pulled together on this one.”
--

Volunteers came from across the region. Bill and Wayne Dewey, WD6AHW and WD6AHX, served as the Net Control operators. A father and son team, the Dewey’s spent hours directing all radio communications on the Fallbrook Amateur Radio Club's repeaters. Another ham volunteer was Jess Mauk, KD6YEI, of San Diego. He manned a RACES van sent in from San Diego County. In all close to thirty radio amateurs served in the first wave of volunteer communicators. Gonsett says that hams were there because they wanted to help:

--
W6VR: “It was really heartwarming to find such an outpouring of devotion from the ham community in people coming up here and making their presence known and contributing as they could. They were all useful and the community leaders thanked us repeatedly for our roles.”
--

Most communications took place over the Fallbrook Amateur Radio Club’s dual redundancy repeater system This is actually two separate machines designed and built by Chris Durso, AA4CD. One outputs on 146.175 MHz and the other on 445.600 MHz. Both carry the same audio. In time of emergency anyone with a scanner radio in the Fallbrook and Temecula California area can tune to either frequency and hear all of the ham radio communications.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

One last note. According to Gonsett, one of the luckiest hams on Earth has to be Joel Brown, KE6FHS. Brown is the president of the Fallbrook Amateur Radio Club. His home survived the wildfire. Sadly, his immediate neighbor’s' house burned to the ground. (ARNewsline(tm), W6VR)

**

RADIO LAW: COURT THROWS OUR PIRATE RADIO LICENSING BAN

Just because a person one operated a pirate radio station is not enough reason for the FCC to ban him from ever getting a broadcasting permit. So says a Washington D.C. Federal Appeals court. Amateur Radio Newsline’s Paul Courson, WA3VJB, reports from the nations capitol:

--

The government is not allowed to use your past as a bootleg radio operator to block you from holding a legitimate broadcast license, according to a ruling from a federal appeals court February 8th.

But any victory might be short-lived for onetime pirate operators wanting to turn legit.

The case out of Washington DC involved Greg Ruggiero, a onetime bootleg radio station operator around New York. He challenged an FCC rule that bans those found guilty of pirate broadcasting from ever holding a license, or being formally associated with the recently-created low-power radio station service, an industry that has become known as FM microbroadcasting.

The appeals court agreed with Ruggiero's claim such a ban is unconstitutional as the law is now written. But the court also left open the possibility Congress could write a more narrow law in line with the First and Fifth Amendments. Part of the argument centered on a protest philosophy held by many unauthorized microbroadcasters, who see their bootleg ops as civil disobedience.

The appeals court, siding with the former bootlegger, said there was some evidence Congress, in writing the ban into broadcast law, meant to punish those with a protest message, without really improving future compliance with the law. They called it viewpoint discrimination, and said ... not allowed.

Communications law experts are mixed whether the ruling has implications beyond FM low-power broadcast licensing, including whether FCC can use violations in one service to administer broader punishment.

Traditionally, the FCC has kept open the option of revoking other licenses held by a violator, beyond the service where the violation took place. For example, someone in violation on the ham bands might have his commercial radiotelephone license pulled as well.

In Washington, Paul Courson, WA3VJB, reporting for the Amateur Radio Newsline.

--

And what might this decision mean to Amateur Radio? Especially those cases where ham licenses are challenged based on character issues. According to retired ARRL President George Wilson, W4OYI, probably very little. George, who is also an attorney, says that despite the ruling, the FCC still has the authority on a case by case basis to deny a license to a pirate broadcaster. They can also still designate for hearing the license of any station who breaks the law or violates government rules. (Published news reports)

**

RADIO LAW: FOIA BECOMING MORE DIFFICULT

Hams fighting the FCC over enforcement and other issues are finding it a lot more difficult to obtain government records under the Freedom of Information Act. This is because of an administration policy change made a month after the September 11th terrorist attacks. That’s when Attorney General John Ashcroft directed all agency leaders to be more cautious in releasing records.

Over the years, some hams who have been tagged with violations by the FCC have tried to use the federal Freedom of Information Act to try to get a line on their accusers. Most of the time the government refuses unless the person making the request can show good reason for the information to be released.

While not of a national security nature, none the less, bureaus like the FCC will most likely be heading the words of Attorney General John Ashcroft who says that agencies must carefully consider things including the effectiveness of law enforcement before releasing any documents. Ashcroft says that agencies that legitimately turn down requests made under the Freedom of Information Act will have the backing of the Justice Department in doing so. (Published news reports)

**

RAIN PROMO: HOW MANY HAMS ARE THERE IN THE USA?

I'm Greg Sperling, KB9DBC.

Just how many hams are there in the United States?

As you heard last week here on Amateur Radio Newsline, the picture is not a rosy one. You can hear Bill Pasternak, WA6ITF, interview with W5YI publisher and VEC Fred Maia this week on the RAIN Report. It is accessible in both Windows Media and RealAudio at www.rainreport.com and for the technologically challenged by telephone at 847-827-7246. (RAIN)

ENFORCEMENT: LOS ANGELES AREA PAROLED RADIO OPERATOR RE-ASSERTED FOR PROBATION VIOLATION

A Bell California man on parole for jamming police communications is now being held without bail for violating his probation and allegedly making death threats on the 2 meter band. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details.

--
You may remember that back on November 14, 2001, the FCC set aside an Amateur Service license and the call sign KG6IRO that it had issued to one Jack Gerritson. That grant was made only a few days earlier on November 8th. The Commission took action after it received information that Gerritsen had been arrested in 1999 and convicted in 2000 for interference to the Los Angeles Police Department radio system.

Gerritsen was out on parole after serving one year of a five year prison term on that conviction. On January 29, Los Angeles FCC agents participated in the pre-dawn re-arrest of Gerritsen after authorities received complaints of death threats allegedly made by him on several Amateur frequencies.

As Gerritsen was on parole in the earlier case, a no-bail search and arrest warrant was served. This is because the terms of his probation banned him from possessing any kind of radio transmitting equipment.

But at the time he was taken into custody Gerritsen reportedly had over twenty radios at his premises. Of these the FCC says that eight were capable of operating on frequencies in the Amateur, Marine, Land Mobile and Public Safety bands. The FCC says that Gerritsen even had a Marine radio with batteries connected to it, and a length of antenna line running outside his residence hidden in a closet.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC says that after they set aside Gerritsen license that he continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area. It acted on these complaints. Now Gerritsen may spend the next four years in jail. (FCC release, other sources)

**

ENFORCEMENT: FCC ORDERS POWER COMPANY TO HELP A HAM

The FCC has told an Alabama power utility that it has to clear up interference it is causing to a local ham radio operator. Amateur Radio Newsline's David Black KB4KCH, has the latest from our South East Bureau in Birmingham:

--

For more than two and a half years, Dan Jeswald, W4NTI, says his ham radio communications have been hampered by a pesky problem: interference. Jeswald moved to Anniston, Alabama, in June, 1999. It wasn't long after that, he says, that he began experiencing interference on numerous high frequency bands. He says 6 meters became unusable because of popping sounds and other interference Jeswald says sometimes rates full scale on his equipment. He says the noise is worst during cold weather and sometimes goes on for days.

Jeswald suspected a faulty transformer or other power company equipment. He says he contacted Alabama Power. Jeswald says the power company responded and began working on the problem. But in midstream before the problems were eliminated, Jeswald says there was a change of people he dealt with at the power company. Jeswald says his efforts to get help with the problem since then
have gone nowhere.

With few options left, Jeswald contacted the ARRL, which put him in touch with the FCC. On January 30th, Special Counsel Riley Hollingsworth sent a letter to Alabama Power's Chief Executive Officer. In the letter, Hollingsworth advises the utility about Commission rules governing equipment that generates unintended interference. And he informs the company of its responsibility to fix the problem, or possibly face fines if a violation is found.

A call to the power company seeking comment was not returned. Meanwhile, Dan Jeswald just hopes the airwaves clear up--and soon.

From Birmingham, Alabama, David Black, KB4KCH, for the Amateur Radio Newsline.

--

Alabama Power was given thirty days to advise W4NTI as to what steps it was taking to solve the interference. (FCC release)

**

THE CHANGING OF THE GUARD: WAYNE WILLIAMS, K4MOB - S.K.

A radio amateur who dedicated almost a quarter of a century editing a ham radio magazine has crossed over to the other side of the Ethereal Abyss. This with word that Wayne Williams K4MOB, editor of the SouthEastern Repeater Association magazine "The SERA Repeater Journal" has passed away.

According to Gary Pearce, KN4AQ, Williams died at home early Tuesday morning, February 12th of complications from cancer. He was 65 years old.

Pearce says that Williams passion in Amateur Radio was FM and repeaters. He became active in SERA's predecessor, the Carolinas-Virginia Repeater Association, in the early 70's. This, at a time when two meter FM was just beginning to gain in popularity.

In 1977 Williams became the editor for the group's magazine, the Repeater Journal. The Journal was already a respectable size 44 page booklet, with regional advertising from local dealers and hamfests. But over the next 23 years, K4MOB built it into a quarterly magazine featuring full-color covers and both national and regional advertising.

--
Gary Pearce KN4AQ: “Through the Repeater Journal and through the coordination body Wayne helped to provide the infrastructure that we enjoy today on VHF and UHF FM. Repeaters that we can operate with a minimum of interference and maximum of range and quality of enjoyment.”
--

In parallel with his SERA activity, K4MOB also established Williams Radio. He started the business by amassing a huge inventory of crystals. In that pre-synthesizer era, two meter FM radios required a pair of crystals for each frequency used. Other crystal sources made hams wait days or weeks for delivery but Williams Radio was one of the few instant sources of crystals for almost every frequency, and for almost every radio. Later, the business added accessories and several lines of radios. It was a family affair, with Williams wife, brother and sons pitching in at hamfests across the region. K4MOB retired from Williams Radio in 1997.

Wayne Williams, K4MOB, is survived by his wife Gerry KB4SER, and two sons, Wayne Jr. and Chris. A third son, Greg, passed away in 2000. Pierce says that Wayne Williams was a very special man in ham radio. All that knew him say that he will be missed. (KN4AQ)

**

AWARDS: THE VITA WIRELESS SAMARITAN AWARDS

The Cellular Telecommunications and Internet Association along with the Cellular Telecommunications industry Association's Wireless Foundation have honored the winners of the 2001 VITA Wireless Samaritan Awards and the 2001 Wireless Industry Achievement Awards. Among the recipients are average citizens from Massachusetts, New Hampshire, Texas and South Dakota, who had the presence of mind to turn to their cellular telephones in emergency situations. The VITA Wireless Samaritan Awards are given annually to individuals from all 50 states, the District of Columbia, and Puerto Rico. (CTIA Release)

**

AWARDS: HAMAWARDS.COM

Hamawards.com is a new website that is currently under development. According to Anthony Farmer, KB3HGY, the mission of hamawards.com is to provide centralized on-line information regarding all awards that an Amateur Radio Operator can receive. The site is currently being developed. More information is at www.hamawards.com. (News release)

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

HAM RADIO AT THE WINTER OLYMPICS: ANOTHER COMMEMORATIVE STATION

Yet another commemorative station is taking to the airwaves form near the site of the 2002 Winter Olympics. Linda Reeder, N7HVF, reports from Salt Lake City Utah.

--
Linda Reeder, N7HVF: "It will start on Friday February 22nd at 5 PM to the 24th. Our station call will be K7O on 80 through 10 meters. If you want a QSL send an self addressed stamped envelope to Mark Richardson, W7HPW, 11361 South 5825 West Payson Utah 84651-3622"
--

Again the call sign to listen for is K7O and QSL's with a SASE go to Mark Richardson, W7HPW, 11361 South 5825 West Payson Utah 84651-3622 (ARNewsline (tm), N7HVF)

**

CONVENTIONS: HAMVENTION 2002 BANQUET MASTER OF CEREMONIES NAMED
The Master of Ceremonies for the 2002 Dayton Hamvention Banquet will be Carl Nichols, N8WFQ. Nichols is the Chief Meteorologist for WDTN channel 2 News in Dayton. This is a forth return performance for Nichols who served as Hamvention banquet Master of Ceremonies since 1998. (DARA)

**

CONVENTIONS: WIA IN MELBOURNE IN MAY

The 2002 Federal Convention and Annual General Meeting of the Wireless Institute of Australia is now slated for the city of Melbourne on the 17th, 18th and 19th of May. Among the many subjects to be discussed at the meeting will be a possible restructuring of the WIA and the possibility of a Foundation class license similar to that recently introduced in the U-K. (WIA)

**
HAM RADIO IN SPACE: HAMS ASKED TO HELP NANOSAT PROJECT

Ham radio is being asked to provide technical support for an upcoming satellite project. Jeramy Boot, G4NJH, says it is a bird called Nanosat:

--

John Heath, G7HIA, the Secretary of the National Space Centre Amateur Radio Society, reports that Bristol University is asking the world-wide amateur radio community to assist with data capture from their forthcoming Nano Satellite Project.

Hand-launched from the Space Shuttle during a space walk, the 6.5-kilogram satellite will send data that can be decoded with software available free from their web site. The software is not yet written because the university wants to give amateurs the chance to have input into how they would like the data stream: 1200 baud AX25 packet, 9K6 packet, Bell 202, or Soundcard etc. More information and an on-line survey form is available on the web at www.handsat.co.uk

Jeramy Boot, G4NJH

--

If you missed that website address you can find it in the print edition of this weeks amateur Radio Newsline report. (GB2RS)

**

INTERNATIONAL - ENGLAND: QUEEN ELIZABETH’S 50TH ANNIVERSARY

Thanks to the efforts of the Radio Society of Great Britain, UK Amateur Radio operators will be taking part in a very special celebration. On Wednesday the 6th of February, England’s Queen Elizabeth marked the 50th anniversary of her accession to the royal throne. The Queen's Golden Jubilee will be celebrated next June, and the RSGB has negotiated the use of a special prefix for the celebration. Starting June 1st and continuing through the 30th, UK hams will be permitted use of the 'GQ' prefix to help commemorate the event. (GB2RS)

**

DX

In DX, E20NGF says over the Internet that there is now a new Worked All Thailand Provinces award. There are currently 76 in Thailand and this particular awards requires that you contact and confirm each one. And while E20NGF calls it a great challenge to all award chasers, he also notes that its

not all that difficult to log 20 provinces these days with more than 1000 Thai hams already on H-F. Check the various DX and awards websites for full information. (RSGB)

**

THAT FINAL ITEM: THE NEW ZEALAND AREC AWARD

And finally this week, New Zealand's team of Amateur Radio Emergency Communications volunteers has received an important award. Its a special honor in recognition of their providing support of Search and Rescue efforts down-under. Amateur Radio Newslines Jim Meachen ZL2BHF in Auckland has more:

--

The inaugural presentation of the New Zealand National Search and Rescue Award for the year 2001 was made to AREC at a ceremony held in Wellington earlier this month.

The Award recognizing AREC's outstanding performance and contribution to search and rescue in New Zealand was made by Marion Hobbs MP on behalf of the Government Minister of Transport. In presenting the Awards Marion Hobbs said of AREC:

--
Sound Here
--

Brian Purdie ZL2ADL the National Director of Amateur Radio Emergency Communications accepted the Award on behalf of the AREC team and thanked the New Zealand National Search and Rescue Committee for the award.

--
Sound Here
--

The National Director of New Zealand's Amateur Radio Emergency Communications Brian Purdie ZL2ADL. Further detail of the award ceremony with photographs can be found on the NZART web site at www.nzart.org.nz.

From Auckland New Zealand, I'm Jim Meachen ZL2BHF for Newsline.

--

By the way, ZL2BHF says that he will be a flying in from Kiwi Land to take part in this years Amateur Radio Newsline sponsored live Ham Radio Town Hall meeting. It takes place at the 2002 Dayton Hamvention at 1 p.m. Eastern time on Saturday, May 18th. (ZL2BHF)

I assure you I am not trivializing their deaths. I am upset whenever
I hear of decent people losing their lives in an undeserving way.

What I *am* trivializing are the comments about how "hams have died
trying to activate X". The original discussion (a tangent from the
eQSL subject) was whether DXpeditioners lose money due to eQSL's; i.e.
whether they deserve monetary compensation for their efforts. I, for
one, typically send $5 to a DXpedition group when I request a QSL.
I appreciate what they do, and want to help out. That a few DXers
have died on an expedition does not make DXpeditions more noble, nor
does it make them more deserving of cash. It's simply an unfortunate
occurence, like an ice fisherman who falls through the ice or a skier
who hits a tree.

Hi Folks,

I worked a station claiming to be HV3SJ the other day on RTTY (Feb. 11th, 2254UTC, 14.083). He was just giving stock 599 rpts and no QSL info. Looking in QRZ.com, Buckmaster and ProLog routes, it appears as if the tower was removed and the equipment given away about 3 or 4 years ago after the previous QSL manager, I0DUD, passed away.

The op signed off and went QRT about 45 minutes after my QSO, and used the name Father Mike.

So, my question: Has HV3SJ now been reactivated or was somebody pirating the call. If legit, this is one QSL I'd dearly to have.

Source record: 14375

Howdy,

I've been reading about , and getting intrigued by, the MFJ-1026.
I've read the on-line manual and some favorable reports on AC6V's web-site.
Does anybody herr have any thoguhts, opinions, reviews, etc. of this that
they'd like to share ?

I might get one in march and planned usage would probably be to
throw up a simple homebrew wire antennas from backyard trees. I have on
up now that's 1/4 wave and does good but noisy. Usage will be on 75M net
and more later if does good. Aware that MFJ-1026 can be used for null or
enhancement. Seems pretty good, would like to know what DX'ers here say.
If it helps, rig is FT-980 which I think is great reciever also and ahead of the
1026 will be Yaesu FL-2100B amp and Heathkit tuner. Please accept my thx.
in advance.

Andrew / KG4JBM

700. Best Mobile//Portable/Base-capable Trx. for DX ??

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-19 01:01:47 UTC
From: Cathexis@yourhaterols.com
Message-ID: <3c71a091.170296243@news.erols.com>
Source record: 14376

Howdy,

Yep. Which one can "do it all " best ?
By do-it-all I mean it should be capable of HF plus more
in multi-modes. It should be capable of base station,
portable or even mobile use without jumping through
incredible hoops. It should also be capable of linear
amp. hook-ups.

The FT-817 is a neat looking radio - but only for QRP.
That seems to leave the IC-706MKIIG and the FT-100D.
So I guess it's down to these two unless I missed something.
The usage idea would be base+ amp,, portable meaing out
on the carport on cool summer nites (important), and mobile
capable so unit can be mounted in minivan for possible planned
cross-country/VE trip.

Mostly I'm not sure of the portable abilities here as I don't really
want to be lugging heavy PS's out on the carport. I think it would
be alot of fun to have 1 radio you could work with as a base, then
pop a power pack on and go out to the porch, than pop into your
vehicle for those late-nite runs to 7-11. Also, I don't know which is
the better radio in general. Any feedback would be appreciated as
summer is coming quicker than you think !

Thx. es 73 de KG4JBM / Andrew

701. Sony ICF-SW7600GR

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-19 08:53:18 UTC
From: c200herry@yahoo.com
Message-ID: <bdf14960.0202190053.24909c0d@posting.google.com>
Source record: 14377

Hi everybody.

I have been thinking about buying Sony ICF-SW7600GR
receiver. But I found following information on the Web
about Sony ICF-SW7600 receiver:

ICF-SW7600
Radio Netherlands' measurements
Frequency Range | Sensitivity (in microvolts)
| for 20 dB S+N/N
---|---
2 - 6 MHz | 2.1 mkV
12 - 17 MHz | 10.6 mkV

Bandwidth	Dynamic Selectivity
+/- 5 kHz	26.0 dB
+/- 10 kHz	46.0 dB
+/- 15 kHz	51.0 dB

Blocking level ..... 4.2 mV

Image Rejection ..... 16 dB
(at +/- 910 kHz)

Intercept Point ..... -5 dBm

And I'm wondering:
Does Sony ICF-SW7600GR have the same selectivity and sensitivity
as Sony ICF-SW7600 ? I think that above mentioned characteristics
are too bad for receiver of that class (dual conversion, Synchronous
detection and so on).
Could anybody tell me smth about selectivity and sensitivity of
Sony ICF-SW7600G/GR model?
Has they been improved?
Maybe anybody knows any other additional information?

Thank you in advance.
Andrew.

28.535 is becoming a mess, as is quite a few other frequencies.
Filing reports dont seem to do anything and the guys Freebanding
all over dont seem to be affraid?

Heck, I even worked one (Cause I called CQ nearby) and he came back
using N0VDT and called himself paul in Minnesota. But N0VDT is a
gordon in Colorado.

Oh well, Guess we will lose 10 meters (My favorite) to the free
banders if the FCC dont get on the stick soon.

I don't know the final answer. But I am going to a hamfest in early march
and Riley Hollingsworth, the FCC " Enforcer" is scheduled to speak. He
spoke last year and spent half his time fielding questions. If the ng wanted
to post a few " horror stories" I would try to pin him down on the topic. Me
personally, I wanted to ask why I could swap PGP e-mails with him all day
long if we wished, but to try the same on RTTY (for example) is illegal. I'm
not naive about the aftermath of 9-11,. But I think that's a bit of an excuse
as this rule has more to do with national security circa; 1942, not the 21st
century. After all, if you can't enforce laws againest Freebanders, than what
does a PGP-Using Nazi Spy have to worry about ??

12 and 17 meters also getting bad. 12M loading up with rogerbeeps, kids
hollering in Spanish and overmodulated, echoed LSB, USB and FM.
This evening on 17 I listened to an extended "radiotelephone"
conversation on 18.100 (still the CW subband as far as I recall) between
a man possibly in Canada and a woman in a Caribbean location. No IDs,
sounded like a ship-shore chat. Obviously beyond the "authority" of FCC
but irritating QRM nonetheless.

The FCC is a typical government bureaucracy -- it grinds slowly but it grinds extremely fine. When Riley has his case together, you can bet there will be a few blatant, high-visibility "freebanders" whose nuts are cut off as an example to the rest.

Do yourself a favour and don't call them "freebanders." That
just helps them to justify it. Call them pirates, which is
what they are.

I Hope so, I dearly hope so,

These guys are very brave hiding behind a mic. But if several of them
get 10K fines and jail time, the rest will back of faster than a deer
from a forest fire. I just hope its soon as 10 and 12 meters are
becoming a mess.

Last night I was trying to push my puny little 40W SSB signal to Temotu Island where Babs at H40T was sitting on 28.496. There were a couple of good-ole-boys talking about trucks with severe echos on their signals right on top of the DXpedition. I might have been able to cut it down with a yagi, but with my dipole I was stuck.

I don't think there's a way to really stop this, short of finding a few and fining them $10,000 and seizing their toys. Problem is, by their very nature this is not a cohesive lot, so cut off a couple of numb-nuts and nobody will care, that's the long and the short of it. Do you think these cretins read Riley's letters every few weeks on the ARRL Web site? No. Riley's actions may stop and give an amateur pause if he or she is operating in a borderline fashion, but it will do nothing to stop the spread of this nonsense.

A good start would be to establish stricter manufacturing standards. Some ideas I've thought about for 11m equipment would require the bits most likely to be messed with sealed in an epoxy block, not allow schematics to be distributed and radios must be sent back to the manufacturer for service.

As to the amateur side of the equation, while I do love to see some of the 10/12/17m rigs out there on the market, I think it's time to put an end to them for the greater good of the hobby. I really don't like the fact than anybody can go into AES or HRO or any retailer and walk away with a rig for $200--ditto for the 2m/440 rigs at Radio Shack. Want a rig? Show a license and the paperwork gets sent to the FCC no exceptions. Inventory must be accounted for, and no back-door deals.

It sucks, it's restrictive and it smacks of big-brotherism, but again, the needs of the many outweigh the needs of the individual.

None of these measures will get rid of the radios already out there, and nothing will stop someone determined to get on the air illegally.

The most serious threat to 10M does not come from the pirates who either can't be bothered getting a license or don't want one (but who otherwise operate reasonably cleanly in the so-called freeband below 28). Frankly those aren't the ones I'm interested in stopping (read throwing enforcement dollars and man-hours at). No the problem comes from the epsilon-semi-morons who get these things at truck stops or CB shops, get their buddies to soup them up with beeps and noises and echoes, etc. DF and posecute as many as they can, to be sure, but make it an order of magnitude more difficult to obtain an easily-modifiable radio (or an amateur rig off the shelf that only covers the higher bands) will go a long way to helping.

What the hell are you talking about? The needs of the many outweigh the needs of the individual? Oops, forgive me, I see you're from Canada.<g> Clear thinking Americans have a different outlook on this.

Since the subject of this thread regards "FCC", I write with that perspective.

A Brady bill for radios? There goes that FT1000MP-mkII my wife was going to buy me for my birthday. She can't buy it because she doesn't have a license.

No more ham swap meets either. (See how the Law of Unintended Consequences works)

|
|None of these measures will get rid of the radios already out there,
|and nothing will stop someone determined to get on the air illegally.

Sounds like the Brady bill again.

Note to the DX readership: The Brady bill was an act of the US Congress that makes it more difficult or (ideally to the authors of the bill) impossible to buy firearms. So already law-abiding citizens must prove to the government that they are indeed law-abiding before they may purchase a firearm, while the criminals just purchase their guns on the black market as before or bring them with them along with the smuggled drugs. (As an aside, most of the countries from which the drugs are smuggled all outlaw the ownership of guns. Funny how this works.) But I digress...

What is needed is more enforcement of existing regulations. Unfortunately, I can't drive around Southern Arizona without being stopped at "Border" Patrol checkpoints (20 or more miles from the border) where they are looking for illegal aliens---sorry---"undocumented migrant workers" and drug shipments. How about a roving FCC checkpoint where every 18 wheeler (lorry) is checked for CB rigs that can operate out-of-band or with excess power. When one is found, the

Feds confiscate the truck and sell it at auction. It would take about a week to clean up that problem.

Actually, I'm a permanent resident of the United States, but I guess some thoughts do die hard. Frankly, I apply this logic to many of my decisions in life and I find it's a pretty good barometer. Not always the best for me, but *some* things are more important than the individual (in some circumstances). But I'll limit this discussion to our hobby.

I'm not saying a Brady-bill style of waiting period should be instituted. What I would not object to is that if you want a radio you show your license to the vendor, the particulars are taken down and sent to the FCC . Even if they're just collected and sit in a dusty drawer somewhere, with none of us the wiser, at least an unscrupulous retailer in a CB shop might think twice about selling that Thunder2000 boot to the next yahoo who comes in waving a stack of bills. Persistent violators could find themselves shut down if they get caught (see *enforcement* once again). All new radios would have to be be accounted for. Will it have some unintended consequences? Yeah, it probably will. It won't stop private re-sales, hamfest deals or e-Bay. Will it solve the problem? No. Will it help? Yes, it likely will prevent a few of these good-old-boys from getting something they shouldn't have.

And yes, indeed it also smacks of big brother. I don't particularly like the idea of turning to the gov't for answers either, but I don't think the manpower is in place to do anything else right now--and I don't want to see these guys jailed, because frankly I can think of better use for jail cells than to hold radio operators.

>No more ham swap meets either. (See how the Law of Unintended Consequences
>works)

Or radios sold on e-Bay. I agree.

>|None of these measures will get rid of the radios already out there,
>|and nothing will stop someone determined to get on the air illegally.
>
>Sounds like the Brady bill again.

>What is needed is more enforcement of existing regulations.
Yes, and I'll never say anything against that. Unfortunately, there's no political will to do it, and the FCC will only gripe about a lack of resources (i.e. DF teams, prosecutors, etc). I suspect that even if Riley has made it a high priority, he's likely the only one in Washington who does and frankly I don't think he'll be able to muster the staffing requirements necessary to make a significant dent in the problems.

If some other option exists that might slow down the flow of these radios while not impacting hams _too_much_ then I don't see the harm in giving it a shot.

Some blame has got to be placed on the shoulders of the retailers who don't give a hoot in heck about anything other than selling as many radios as they can. Spirit of the law be damned. Heck, how many Yaesu and Icom handheld radios did we see in the nightly news being used by Osama and his band. I'm betting dollars to doughnuts that these weren't commercial radios!

If all you do is target the truckers for heavy enforcement they will raise holy hell and make noises about harassment and delayed shipments, and that the only time they use their amplifiers is to summon help in rural areas, etc. etc. It's a good start, but I think there has to be a combined and co-ordinated response. The restrictions placed on linears have likely helped quite a bit, and I don't see how some extra regulation of easily-modified radios could hurt legitimate hams in the slightest.

I'm not looking to Washington to solve it all on their own either. Everybody along the way has part of the burden to bear...retailers, private sellers, e-Bayers, individual hams who now do nothing to stop this nonsense and the FCC as well. Expecting the gov't to be the first, last and only part of this solution is folly.

Don't worry, in a few years the solar cycle will tone down thereby giving us little propagation. Then the freebanders will limit themselves. Just my opinion.

Hello Peter,
The entire site is tested with the current version browsers from
Microsoft IE6, Opera 6, and Netscape 6. All pages including the W9INN
Page are fine with these browsers....

If you are using an older browser (especially Netscape) then you might
want to upgrade since many sites now use up-to-date html that was
devised long after these older browsers were released.

The site is however 'optimized' for IE 6 (as it says on the home page)
since over 90% of my visitors use Internet Explorer.

According to the access statistics for Google:

http://www.google.com/press/zeitgeist.html

MS IE 5.0, 5.5 & 6.0 are EACH about three times more popular than Nutscape.

That's not so. C2A.exe converts the log to ADIF format, not Cabrillo. You would be better advised to get a current version of CT. It will produce a Cabrillo file when you "writelog."

Steve, what is the motivation for this? Couldn't the DXer simply refrain
from sending his logs to Eqsl?

And once the DXer does submit his/her log to Eqsl, did the DXer not work the
DX because the confirmation came from this manager and not that manager?
I'm inclined to think that the issue is money related.

Just to avoid all the hand wringing that this appears to be causing, I'm
satisfied with whatever I've recorded in my log book. I'd rather have
pictures of my kids on the wall anyway. All my real awards are in the top
drawer of my dresser, and my kids will get to throw them out someday, same
as any paper I put on the wall.

What else would Eqsl be doing if not acting as a qsl manager? You send them
your logs and... they're not supposed to recover their costs?

Charging for a contact isn't fine, no guessing required. I think you meant
to say charging for a "confirmation." At least thats what a KF2 is supposed
to be saying in America, given Part 97 as it exists.... unless we "just

ignore" the rules.

Geez, when I bought (over the last few years) my HTX-100 & HTX-10 at my friendly local Radio Shack, they politely asked to see a copy of my license before they would sell the radio. Ditto with the HTX-202 2 meter handheld.
FCC should go after these morons with everything they have- and make sure the word gets out to the yahoo truckers and illegal immigrants from the Caribbean that their "personal" networks are going to be busted.

> Steve, what is the motivation for this? Couldn't the DXer simply refrain
> from sending his logs to Eqsl?

The whole premise was a paper-less qsl medium. The major problem being
that people who participated in the DXCC program could not submit eqsls
for DXCC credit or clicks as some call them. And yes, the DX'er can
refrain, but when this was announced it was a sudden done deal and a
few, not all of the DX'ers felt that they should have had a say as to
whether or not Eqsl would represent them.

>
> And once the DXer does submit his/her log to Eqsl, did the DXer not work the
> DX because the confirmation came from this manager and not that manager?
> I'm inclined to think that the issue is money related.

It isn't a matter of the confirmation per say, I contact you, you reply,
we're both in the log..confirmed. I download my logs, or visa versa and
we pick them up from the Eqsl site. It's become a matter that now,
again for participation in the DXCC, WAZ and several other programs, if
your contact is in Eqsl's, you have to pay to A $1 have them print out
the card, mail it to you, then you have to turn around and submit it to
whatever program your are participating in. So yes, it is a money

issue.

>

Ands as Carl had said, he doesn't either, but there are lots of people,
myself included that do.

>
> > I have noticed a number of people requesting that their logs be

> What else would Eqsl be doing if not acting as a qsl manager? You send them
> your logs and... they're not supposed to recover their costs?

According to the various programs, there must be an understanding that
the QSL manager is representing the particular DX station. There are
several instances right now where the are bogus QSL managers for a
number of pirate stations. My understanding from discussion with Wayne
Mills and Bill Moore is that you can't arbitrarily declare yourself the
QSL manager without specific permission form the DX station. Up and
till recent Eqsl was a clearinghouse for qsl confirmations. Now
recently, they have gone into the business of selling cards if you wish
to participate in these various programs.

>
> Charging for a contact isn't fine, no guessing required. I think you meant
> to say charging for a "confirmation."

Correct, my error. The contact has already been made. If you want a
"valid" confirmation that can be submitted for DXCC or WAS or WAZ, you
have to pay.

> At least thats what a KF2 is supposed
> to be saying in America, given Part 97 as it exists.... unless we "just
> ignore" the rules.

Yep, Part 97 specifically states you can't accept money for a contact,
but then again, as you correctly point out, this is not a contact, it's
a confirmation of the contact already made. I'm aware of several DX
stations that actually required a cash contribution above and beyond the
normal SASE or IRC, before they would release a card, one formerly being
on Roatan Island and the other being on Reunion Island. But then their
foreign stations and Part 97 does not apply. The point is, it seems to
go against the very principles that Eqsl has been trying to develop. A

paper-less qsl format that requires virtually no $$$ except for a voluntary donation to the upkeep of the site. Yet, now they are printing cards for cash. You can't have one that you can use for these programs unless you pay. In this case, are you paying for the contact or paying for the confirmation? The contact has already been made, as proven by the downloaded card. The confirmation is another story and is not covered anywhere by Part 97.

It all boils down to the principle. If you want to play, you are being forced to pay. Illegal, no, just a tad strange that they'd set the bar and when more and more people complain they lower it themselves.

I doubt, at least for the time being that you are going to see any of the big DX operations use Eqsls. Again, for one thing, the card won't count for any clicks, as Jim calls them. For another, there is the voluntary donations that some people make with their cards to help offset/recover some of the costs. What I've seen is the basic DX stuff, essentially from contests, etc. I doubt you'll see the TI9M or the H40T downloading their logs to eqsls. LOTW maybe, but for the time being not Eqsls

But as you said previously, if you aren't participating in these programs, what difference does it make if they print cards or not, the point is moot. The confirmations are their in the computer and the archives.

Up until your last sentence Brian, it was nice to have a rational conversation with you for a change. You just can't let a good thing go by without going true to form. Too bad.

Have a good weekend

I'm a little ambivalent regarding the traditional qsl vs eqsl
comparison. I do think that the electronic form of qsl'ing takes away
some of the preciousness of the event. I remember my first regular qsl,
but would have to look up my first eqsl.

That being said, I think it is inevitable that the electronic form of
qsl is the way things are going to go.

It won't destroy DXpeditions, it will just change the way they work.
Wanna give a donation? Perhaps the donations will be looked for before
the DXpedition starts. The other "problems can probably be worked around
also.

The time of transition will be the rough time. We'll be using direct,
Bureau, and eqsl at the same times.

Hello Bill and others....
This covered with a link you can click on to get the registration
email re-sent to you right away. Here is the URL.

http://www.eqsl.cc/qslcard/faq.cfm#Signup

Here is the text ...but you'll need to go the eQSL link above to use the
clickable link...

I registered but never got a Signup Code in my e-mail!

If it still hasn't arrived after 15 minutes or so (to account for
Internet delays), click here and we will re-send it to your e-mail
address immediately.
If your e-mail address had spelling errors, our fully automated system
will have received an e-mail about it. If you believe that is the case,
go here and you can correct the bad address and re-send your Signup Code
to you.

Good luck and happy eQSL'ing....

Could it be that those 5% know something that the other 95% either don't
know, or know but ignore?

David, using a nearly Microsoft-free* and very secure 1.5 gigaflop/s Mac G4

*Exceptions: 9 year old versions of Word and Excel, both so ancient they
are ignorant of macros, and thus immune to macro viruses. Conversion
utilities allow these programs to cope with documents created by more
recent versions; the conversion process discards the macros, and any
viruses the macros may contain.

Please don't forget that lots of people are being "forced" to use
IE thanks to Bill. Lots of people aren't familiar with computers
and other browsers and just use what their computer offers.

If it would be possible to make statistics of browsers which have
been chosen by the users themself, I'm sure Netscape will do better.

By the way, I'm using Netscape 4.71 for quite some time now, and
there are only a few sites that aren't "readable". Some other sites
look a bit better in IE, but this is the first site that really makes a
mess on my screen, and I really browse quite a lot! :)

Bye,

Peter Hunt
Holland.

You have to know that ole Charles not only advocates eQSL as the only creed,
but also is a disciple of the Church of Micro$oft. Whatever this great
American company produces, simply *must* be great.

Computer security is an area that this gentleman knows nothing about. But
that's good, since he's one of the guys that produces an infinite stream of
money to security consulting companies. It's people like ole Charles who
promote the fierce growth of security tools like virus walls, virus
scanners, firewalls, trojan scanner etc.

Hello Walt,
The minimum screen size I test for is 800x600. If your screen is
smaller than that - or - you have additional menus or browser add-ons,
or ISP ads on the side, that claim part of that space you may have to
use the horizontal scrollbars.
BTW whichever browser one uses has nothing at all to do with the
screen size. That is a Windows function setup in Display / Properties

MS-Word 2000 (even the included-with-most-PCs SR-1 version) can be set to disable unsigned, untrusted macros. The option is under Tools, Macro, Security, High or Medium.

Of course, anyone that is concerned with security and viruses would have Norton AntiVirus 2002 (or equivalent) running and keep it (and everything else) up to date. It will also eliminate the threat without throwing the baby out with the bathwater.

Crume's book 'Inside Internet Security' advises that it is generally more secure to be up to date than to be on the trailing edge. Generally more old holes are being closed than new holes created. And the new holes are generally less well known. Good book.

Let me repeat - I see both approaches.

At my workplace they run Win 95 on the desktops and Win 2000 on the servers. The went cheap and use McAfee junk for AV. The place is a Help Desk disaster area. Blue Screens of Death left, right and centre on a daily basis. Even had a big virus mess a few months ago (things not up to date). Stupid.

At home (having seen the mess at work) I try to take the opposite approach and generally keep things up to date. Try to get the latest SW on sale (XP Cdn$99) or with a fat rebate (Norton 2002 Cdn$30). Never looked back. When we get a virus by e-mail , Norton pops up and offers to nuke it. Stable as all get out. Close to a perfect PC experience.

Of course, everyone is free to choose their own path through life. Best wishes.

I've often thought that it would be nice to setup a national DFing network
using the internet and APRS technology.
If someone knowledgeable were to write a standard for the DF site equipment
and internet address scheme then local volunteer groups or individuals
could setup DFing stations in their home towns.
It should then be possible, using the hundreds of DFing receivers available
over the internet to locate these criminals. (even the mobiles) Once
identified, we
could provide evidence to the FCC to act on.

Don't use any Micro$oft products and be rid of all those problems mentioned above. I f you decide to use Non-Microsoft products for any internet-based applications, your risk of running a compromised machines is reduced to an amazing extent.

All severe security holes related to trojan horses and viruses are Microsoft security holes. What does that tell us? I don't run a firewall, virus wall, trojan horse scanner or other crufty pieces of software and yet my system is secure. Wanna bet?

If you learn to use Microsoft you end up with the same results.

> *All* severe security holes related to trojan horses and viruses are
> Microsoft security holes. What does that tell us? I don't run a firewall,

So Peter doesn't run MS products due to its security issues. I suspect Peter walks (only when streets are deserted) and won't use motor vehicles because they are involved in so many accidents. Peter must not fly, airplanes are related to most air fatalities. No boats, you could drown. No sex, STDs and heart attacks. Peter should pull the plug on his computer, fire hazard!

MS products ROCK if you know how to use them. Oh, you wouldn't know, you don't. To each his own.

Hello Pete,
Yes I sure do! Morse Tutor Gold will do that and a lot more. While learning CW myself I tried several freeware - and - commercial CW software tutor programs. Morse Tutor Gold is the Cadillac of all of them IMHO. Here is the link to their homepage and from there you can order.

GGTE Amateur Radio Software
http://www.ggte.com/

It is also available through HRO outlets and the ARRL organization....good luck. Morse Tutor Gold took me well past 20wpm with great ease and flexibility in lesson structure....

[x] Crosspost and follow up to news.admin.net-abuse.usenet

Your provider has been notified about your constant abuse of usenet.
Constantly crossposting as default behaviour of your news-client is
unacceptable behaviour by usenet standards. This is clearly stated in your
provider's terms of use, which can be read here:

http://www.bnb-lp.com/terms_of_service.html

Explicitly the following two paragraphs should make things rather clear to
you:

"Sending a message to many different off-topic newsgroups (Cross Posting),
is particularly unacceptable and will be treated as inappropriate posting
which may result in account suspension or cancellation.. You agree to abide
by BnB's policies concerning use of BnB's Internet Services. BnB reserves
the right to suspend access to service for your account(s) upon an
indication of disallowed use."

and

"You agree to pay a fine of $500 for flagrant disregard of allowable use
policies including sending unsolicited commercial email, spam, or via
posting commercial messages to Usenet discussion groups whose charter does
not explicitly allow advertisements. You also agree to reimburse BnB for any
costs involved in dealing with such incidents. BnB staff time will be billed
at $ 50.00 per hour. It is at BnB's sole discretion what constitutes such
flagrant disregard of allowable use."

A formal complaint has already been filed with abuse@bnb-lp.com.

Suggested reading: "Visions of the Anointed" and "The Quest for Cosmic Justice"
both by Thomas Sowell.

|
|Actually, I'm a permanent resident of the United States, but I guess
|some thoughts do die hard. Frankly, I apply this logic to many of my
|decisions in life and I find it's a pretty good barometer. Not always
|the best for me, but *some* things are more important than the
|individual (in some circumstances). But I'll limit this discussion to
|our hobby.
|
|I'm not saying a Brady-bill style of waiting period should be
|instituted.

Actually there is no waiting period. One Sheriff Mack of one of Arizona's
smallest counties refused to enforce a federal law at the county level. The
screwed up Congress (I know that's redundant) wanted to pass the law but not
provide any funding for federal level enforcement and tried to foist the job of
background checking and the expense off on local law enforcement. The US Supreme
with uncharacteristic clarity said No Way to Congress.

So now there is a federal database that, in Arizona anyway, is accessible by our
State Department of Public Safety (Highway Patrol). When you try to buy a
handgun, the dealer makes one phone call and in fewer than ten minutes, you have
permission to purchase, unless of course you show up as a felon or a mental
case. (Considering the latter, this might be a good thing for ham radio too)

If you have passed Arizona's test to carry a concealed weapon, then there is not
even a phone call required, you have already been determined to know how and
when to shoot the bad guys and have proven yourself to be of sound mind, a
reasonably good marksman and not a risk to society (other than the bad guys.)
Of course, Arizona is one of the more enlightened states in the union in this
regard. If you live in a "low crime" location such as New York City,
Washington, DC or East Los Angeles, California, then you don't need and can't
have a weapon with which to defend yourself.

(Actually, statistically speaking, Southern Arizona where I live is a "high crime area" but a lot of the crime consists of Mexican drug runners, in the country illegally, and other gang bangers shooting each other. The only thing to be alarmed about is their poor marksmanship that results in innocent bystanders taking one occasionally.)

But I digress... so back to ham radio. It seems to me that the feds already have a database of those holding ham licenses and it is accessible to anyone with an Internet connection. If the suppliers of transmitting equipment wish to limit sales to hams then they have an easy way to verify that the purchaser is licensed.

They'll still miss the sale of that FT1000MP-MKII to my wife tho.

Hello Zoran,
Sorry but I have no pot to sell you. If I - did - have some I would be willing to share with you for free.

The idea of cross-posting IMHO is misunderstood by many. It is a very effective way to disseminate information while only needing to compose a single message. I have to disagree that cross-posting is never "justified". That is just your opinion.....

Some people when they see any message at all that is either not to their liking for content - or - posted to more than 1 newsgroup immediately put on their Spam Cop / Cross-Posting Marshall hats and lead a one-person crusade against the perceived "offender" Many times reply-after-reply get repeatedly cross-posted because the original addressed groups never get edited.....so at one time or another almost all Usenet users are "guilty" of the dreaded scourge of "cross-posting" and many do not even realize it.

Bob Dylan said it best I think..
" ....and don't criticize what you can't understand"

Now this is not directed at you Zoran personally..but at those type of people I have just mentioned

Hello Pete,
You are welcome for the first post..my pleasure. The second post was a directed response to my old friend Peter Lemken ...who trails me around Usenet while attempting to bait me with sarcasm, insult, and generally silly remarks. But you know what.....I think he really likes me.

Maybe see you on the air one of these days...

In this case, your crossposting was questioned because you weren't
"composing", you were answering something someone else "composed"
in a different newsgroup....

Crossposting is also a great way to SPAM other newgroups with your
"web site" URL too, right Charlie ?

Hello Jim,
Thank you for the nice Usenet post. Your concerns as to my posting practices and / or any perceived "spam" that you may imagine, are addressed fully on the FAQ Page of my web site, which as you have pointed out to others, (thank you), is conveniently located in my signature line.

I would like to make one simple suggestion however. Since it is obvious to everyone here that you have some hostility towards others you may want to consider learning how to filter out messages from other rightful Usenet participants that for whatever reason, real - or - imagined, that you don't like so that those messages can then be deleted before you ever have to look at them. If you need help setting up those filters I will be happy to help you....

Now with that said if you choose not to use message filters, it would be self-evident that your hostility is actually directed to yourself for whatever reason and that what we may all be witnessing here is a classic textbook case of masochism. Fortunately there is counseling - and - drug therapy available for you Jim. Please know that admitting you have a problem is always the first step towards recovery. I know you can do it .....

Good luck and remember I remain your friend and Ham Radio "buddy" and will always be here for you to help you through the tuff times anyway I can.

That Jim is "True Ham Spirit". God bless you.....

Thanks, Chuck. When it comes to "drug therapy and
counseling", we know that you da man, so I guess we
can consider that 'expert advise'. Matter of fact, I just
read on your web site at:

http://www.cableone.net/ctj92/index.html?row1col2=faq.html2

"My disability is bipolar manic depression and obsessive compulsive
disorder. In short - Mental Illness. I was diagnosed with these
illnesses in 1991. I am on several medications for symptomatic
relief. I take Prozac ,Tegretol ,and Zyprexa daily. Most days I feel
great!"

Maybe you could add a support page to your "web site" for all the
screwed up people like me and Peter who seem to follow you
whereever you go.

Always remember this, Chuck. There's nothing wrong with you,
no matter what the doctor says. The rest of the world is all screwed
up. You're just perfect :-)

Glad to see you are having a good day. Keep popping those pills....

Norton AV can only catch viruses after they have been out long enough to
be captured and analyzed - then a patch created. In the meantime, thousands
of PCs catch the bugs - and often don't know that they are there.

It, just like any other AV software, works "after the fact". It can only
prevent you against future occurances of the same attack.

And if you don't have the capability to scan all incoming files etc before
they are opened, then you are still vulnerable.

This is true for software/firmware that has been around for a while. It is
NOT true for relatively new releases. IE 6.x is still in diapers. It will
need many "fixes" before its holes are plugged as well as those in IE 4.x

Wrong (at least 80% wrong ?). From the Norton AntiVirus 2002 Help file for your education:

"All computer viruses fall into two groups:

Known viruses: <snip>

Unknown viruses: An unknown virus is one that does not yet have a virus definition. Norton AntiVirus includes an advanced heuristic technology called Bloodhound to detect unknown program and macro viruses. Bloodhound isolates and locates the various logical regions of a file and then analyzes the program logic for virus-like behavior. Bloodhound detects a very high percentage of unknown viruses. In addition, Norton AntiVirus detects unknown viruses by monitoring activity on your computer for behaviors that viruses typically perform. When a suspicious activity is detected, Norton AntiVirus prevents the action.

Copyright© 2000-2001 Symantec Corporation. All rights reserved." Fair Use - education.

> And if you don't have the capability to scan all incoming files etc
> before they are opened, then you are still vulnerable.

Wrong. That feature is called 'Autoprotect' and it is recommended that it be left in its default setting, ON. That is exactly what it does.

787. SSN or SFI? Which is better indicator of the days propagation?

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-25 13:16:00 UTC
From: Bob Cook <captcook@compuserve.com>
Message-ID: <a5dde1qoc1@suaar1ac.prod.compuserve.com>
Source record: 14262

All,

Re using solar indices to predict propagation:

I have recently begun using Icepac, a propagation prediction program. It's a great tool. However lately I have been wrestling with the question of which solar index is the better index for predicting the day's propagation, the SSN, (solar sunspot number), or the SFI, the solar flux index? I've found many web sites devoted to solar info and propagation, too many to list. I've read many papers, graphs and charts discussing and comparing the two indices and their general effect on propagation, but I have not found any research studying the subject of which index is the more closely correlated with the level of ionization of the ionosphere on any given day.

The SFI is a long term (I believe 90 day) average of the the ten centimeter solar radio flux level. The SSN is a smoothed count of the actual number of sunspots seen on the surface of the sun. The SFI index responds very slowly to the daily flucuations in solar activity. The SSN can change dramatically in 24 hours and responds very quickly to daily fluctuations. If the ionosphere can fully ionize in a few hours in the morning and can then loose most of it's ionization through the night, it seems to me that the SSN is the better predictor of HF propagation on any given day. Yet most propagation studies which I have seen and read all use the SFI.

FYI...You can see a good graph of the SSN and SFI for the past 90 days here, (DX listener's Club) www.dxlc.com/solar/. On the same page below the graph you will find a good table of the data plotted in the graph.

If anyone can reference a research paper comparing the degree of correlation of the two indexes with daily ionization and or propagation I'd appreciate it.

Cheers,

Bob

Seems like a fair deal, though. If you're going direct, postage to many countries is easily a dollar, then you include an addressed envelope and a couple of green stamps. And I'm sure the DXpeditions really don't want a stack of 40,000 cards. Using Eqsl avoids them having to get your card in order to return a card, and is a lot easier on the planet. Now if Eqsl could get away from having to mail out a piece of paper, and just post a record in an electronic database.

More power to them. I used to send out cards to the buro at the end of the week or month, depending on how busy I was. Then I would get these direct cards that I had already sent out a buro card, so...I would send a direct back.

With EQSL, if everyone posted their logs it could be a simple matter to match records and get instant verification. They could track all awards for you and generate an e-mail when you needed to send your$10 or whatever to the ARRL.

I think that's the hardest part of this whole thing. How do handle the
busted calls, reversed letters, miscopied callsigns? In CW (I am not
starting this up here) my call can be misconstrued as KF2D if I send it
quickly. How would an electronic database handle matching that up or an
even better problem..not everyones computer clock is set the same. How
can you confirm a contact by computer, for record keeping, if the times
are different.

Right now you are EQSL for the QSL card and the ARRL LOTW for submitting
(soon hopefully) cards to the various programs. Who knows if the 2 can
come to a mutual agreement. Only time will tell.

>
> With EQSL, if everyone posted their logs it could be a simple matter to

I think that's what created the uproar to begin with, the move from the stated course.

>

This is were we disagree as to the nature of the "paying for the contact" The FCC sez you can not charge for making the contact. I and Riley look at this as you (for example sake) are running a DX op in P5..everyone needs this, so you set up a website where those wanting a contact have to deposit $$$ before you'll acknowledge me on the air.

That certainly violates the rule. I think voluntarily, and the FCC agrees on this, that my putting a couple $$$ or extra IRCs to help cover the costs is perfectly acceptable. If I include nothing more than a SASE, including those using the postage of the return country, in the large majority of cases, I get my card. I see website advertising the DXoperation soliciting donations, but nothing that ever states they are mandatory, that would be illegal as far as US based ops are concerned.

All boils down that there are still way too many questions and not enough answers. Once that happens this will become another remember when story.

BTW, did you know Jim, KH2D became a mainlander several months ago. Here's still living on an island surrounded by H2O, but it's part of the state of Fla. I remember you knew him when you were stationed there on Guam way back.

Have a good week

73, Steve

I got it a couple of weeks ago via Abubaker's new German address. I guess my $10 card via Libya never caught up to him.

He had sent me the address via email over a month ago but did not want it made public at that time so I had not reported it here.

Since the 425dx newsletter has now published it I guess I can repeat it here in case anyone has not seen it:

Gee... $10 for a qsl card? Ever hear of eQSL? It's free and now also
approved for DXCC!
Someone in Libya has already spent your $10 too.....are we having qsl
fun yet?

Of course that contact is not valid reguardless of the method of QSL. If
the other station sends back KF2D, and they were supposed to send KF2, you
should correct it on the spot, before you hear QRZ.

I hadn't heard. Makes me wonder who'se running the KH2 buro.

There's good gov't contract work in Florida. I was headed toward Melbourne
area when I changed direction to Ohio. I'd still rather be in Florida,
thunderstorm discharges and all.

796. Kenwood TS-850 Computer Interface Question

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-25 21:59:06 UTC
From: "Dr. W. P. Scott" <wilderscott@charter.net>
Message-ID: <u7lkfh6lgibp2d@corp.supernews.com>
Source record: 14273

I hope this message is appropriate here, as I thought that the many contestors and dxers who use this rig might be able to give me an answer to a relatively simple question:

I want to use a computer cable interface between my 850 and my computer. However, I use a DSP-100 unit which is plugged into the 6 pin connector on the back of the rig. Is it possible to plug the 6 pin interface cable connector to the CONT OUT 6 pin plug on the back of the DSP-100 unit?

Many thanks in advance for the help

Pat Scott, W4NW!

Agree 100% that the contact is not valid and I am sure the real KF2D
would not accept a card for a contact that he did not make, but the
point is that a card was generated with the busted call.

As to why, I still hear the TI, even if the sending station is sending a
D, so he records the wrong call and I record the contact as good. I
doesn't happen too often, only when the pile-ups are big and you need to
get the call out very quickly, BUT, it still happens from time to time.

Normally if this happens and I get a NIL on my returned card, I can
contact the station and have him check for the busted call as long as my
date and time info are OK. Quite often the real good qsl managers will
pick up on it and correct everything as well.

Still gonna be a sticking point

> > BTW, did you know Jim, KH2D became a mainlander several months ago.

Jim was running the buro for many years and it was shut down several
years ago. If memory serves, the huge number of cards were actually for

Japanese stations that got KH2 calls and never bothered to subscribe to the Guam buro, so in the end it was costing JIM big$$$ out of pocket. Perfectly acceptable decision if you ask me. At this time there is no more KH2 buro. In fact, the only "real" KH2 is Danny, KH2JU

Probably, because that's what the manual shows for a TS-850 to another TS-850 connection (when the DSP-100 is used). My guess, however, is that your rig control software will be timing out all the time, because it wants a constant connection.

Why not just try it? It's just serial comms, anyway... Nothing's gonna blow up.

Amateur Radio Newsline Report 1280 – February 22, 2002

Amateur Radio Newsline report number 1280 with a release date of Friday, February 22nd, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ultra-wideband is here and the fight to keep high power unlicensed devices off of 70 centimeters escalates. These stories are first on Amateur Radio Newsline report number 1280 coming your way right now.

(Billboard Cart Here)

**

SPECTRUM ALLOCATIONS: FCC APPROVES ULTRAWIDEBAND

The nation's communications regulators have approved limited use of a new technology that is actually capable of seeing through walls, finding disaster victims and even preventing car crashes. Known as ultra-wideband, is a new method of wireless transmission is being promoted as a potential solution to the squeeze on the nation's airwaves created by the explosion of mobile phone, pager and other wireless device usage. We have more in this report:

--

Ultra-wideband devices will for now operate only in 960 MHz and in the 1.99 to 10.6 GHz bands. In theory, at least, you should never even know that they are there. This is because proponents of ultra-wideband claim that interference to other spectrum users is virtually non-existent -- based on the ultra short duration and pulsed nature of the transmissions. And the Federal Communications Commission agreed when it voted unanimously about a week ago to allow the technology to be used on a limited unlicensed basis.

The FCC proceeded cautiously out of uncertainty whether ultra-wideband could coexist with other strategic services. In other words, it wanted to be certain that it would not cause harmful interference to military communications, cellular telephones and the Global Positioning System. So it only provided ultra-wideband access to a small portion of R-F real estate. None-the-less, the real-life implications of the limits of the FCC decision are far reaching.

Up to now the military has been the only ultra-wideband user. This FCC action will allow for wireless communications and accurate readings of location and distance that have a wide range of civilian applications. For the general public this includes wireless, high-speed transmissions over short distances. Possibly as a way of sending video from a camcorder to a television set or data from a personal digital assistant to a laptop computer. The technology might also include sensor systems in cars to alert a driver to movement near the

vehicle. This could prevent collisions and promote smart air bag deployment.

Otherwise, the FCC has limited use of ultra-wideband technology to public safety. Only police and fire officials, scientific researchers, mining and construction companies will be permitted the use of so-called ground-penetrating radar devices. These would only be permitted to radiate straight down with little or no signal leakage in any other direction. The FCC notes that this system could help rescuers find victims in rubble following a disaster or locate ruptured underground pipelines without digging up entire neighborhoods.

The FCC severely limited distribution of ultra-wideband devices that can see through walls and detect motion within certain areas. Only law enforcement and firefighters will be permitted to have them. In other words, you won't soon be buying a home camcorder that can peer through your wall and into your next door neighbor's apartment. And you probably never will.

Right now the introduction of ultra-wideband will have very little impact on ham radio due to the limited spectrum being allocated to it. But it's use could be expanded in the future if it's proved not to interfere with existing military and public service communications.

For the Amateur Radio Newsline, I'm Robert Sudock, WB6FDF, in Los Angeles.

--

If ultra-wideband is successful it could eventually open up a whole new world of communications for ham radio. For starters, think in terms of so-called smart software defined radios. Radio’s that are so smart that you tell it who you want to talk to and it calls you when that person is ready to hold a QSO.

More on this emerging technology in future Amateur Radio Newsline reports. (FCC and other published reports)

**

SPECTRUM SHARING: SAVI TECHNOLOGY VS. HAM RADIO

The fight to keep radio ID tags off the 70 centimeter ham band is entering the home stretch. This is because the FCC has set March 1st as the deadline for reply comments on RM-10051.

RM-10051 is the Rule Making designation given to a request from SAVI Technologies, Inc. As previously reported, SAVI has petitioned the FCC for it to be allowed to develop and market a family of Part 15 devices designed to operate on the amateur 70 centimeter band. These Radio Frequency Identification Tag devices would operate at a power level far higher than similar devices now marketed and that’s where the real problem with the proposal lies.

Ham radio educator Gordon West WB6NOA, is an expert in weak signal operations. West says that it will mean problems for weak signal and satellite operators:

--
WB6NOA: “I think that the presence of any strong; either continuous or intermittent signal near the weak signal portions of the [70 centimeter] band is going to dramatically cause interference to those of us that monitor for either weak signal beacons -- such as those heard on the West coast that come in from Hawaii -- or for those who operate weak signal SSB and CW satellite.”
--

West says that even some of the micro power Part 15 devices already sharing the 70 CM band are causing major problems:
--

WB6NOA: “Presently on the weak signal 70 centimeter band we are having to put up with low power, intermittent [home] weather stations. You know, those weather stations that you see advertised as transmitting in their data on 432 and 433 MHz. Even these weather stations when they transmit will cause the AGC in my receiver to pump and it takes two to three seconds before the AGC returns [to normal] before I can begin listening again for weak incoming beacons.

Those [transmitters] are just a few hundred milliwatts at about 300 to 500 feet away. You can imagine when these more powerful transmitters come on the air in the 70 centimeter portion of our Amateur Radio band.”
--

But exotic modes won’t be the only ones affected. There is more than ample reason to believe that FM repeaters, remote base and A-T-V operations could suffer as well. And with the reply comment deadline only a few days away Dick Isley, W9GIG, the Secretary of the National Frequency Coordinators Council says that an e-mail and fax campaign to congress may be the only way to get RM-10051 killed.

In an e-mail to the Amateur Radio Newsline and other Amateur Radio publications, Isley says that it is imperative that hams send electronic messages their elected federal representatives in opposition to RM-10051. Isley believes that if 10,000 or more hams respond to this call, the SAVI Technology proposal could become a political hot potato. Hopefully one that is so hot that the Commission drops it completely. (ARNewsline(tm))

**

SPECTRUM SHARING: THE ARRL VS. THE FCC ON SAVI TECHNOLOGY

As hams get ready to write e-mails to congress, the ARRL is following a different diplomacy. It is challenging the FCC’s authority in this matter saying that the agency 'cannot legally proceed with the rules proposed for unlicensed Radio Frequency Identification tags at 433 MHz. Jim Haynie, W5JBP, is the President of the American Radio Relay League:

--
W5JBP: “You have to go back and look at the Communications Act of 1934, as amended. What Congress said was that in equipment that puts out a signal at a certain level must be licensed. The FCC has said that they are going to make this a Part 15 device does not require a license.

Our [ARRL] argument is that they cannot do this by law. Congress would have to pass a law to allow them to make this powerful radiator a part 15 device. In other words, change the whole parameter of what Part 15 [devices] are."
--

Haynie says that the League has said it will 'do whatever it takes to keep the FCC from putting these Radio Frequency Identification tags in the 70 centimeter band. You can hear more from President Haynie by tuning in right now to the RAIN Report. It in streaming audio at www.rainreport.com and on the phone at 847-827-7246. (ARNewsline(tm), RAIN, ARRL)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WA2UGO repeater serving Mt. Beacon N.Y.

(5 sec pause here)

**

PUBLIC SERVICE: HAM RADIO AT THE WINTER OLYMPICS

Ham radio was a major player at the 2002 Winter Olympics. Not competing in the games, but working in support of overall security. Amateur Radio Newsline's Norm Seeley, KI7UP, has more.

--

According to an ARRL bulletin, Amateur Radio volunteers assisted with security and were ready to provide back-up communication for the Winter Olympic games. According to Utah ARRL Section Manager Mel Parkes, AC7CP, a special public safety organization called the Utah Olympic Public Safety Command was created by the various local and national public safety organizations that provide the security necessary for the international event.

According to Parkes, Section Emergency Coordinator John Mabey, W7CWK, and Brent Thomas, AC7H, from the State of Utah Comprehensive Management Office began working on this effort over a year ago. Mabey, along with Davis County Emergency Coordinator Hall Blankenship, and several other hams headed up the effort to provide emergency backup communication for the Olympic Security Command. At its height the winter games the ham radio group numbered close to 200. These radio amateurs provided back-up communications with the ability to reach numerous Olympic venues 24 hours a day.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Parks had some nice words for the corps of Olympics communications volunteers. He said that the hard work and dedication by all these dedicated Amateur Radio Operators certainly contributed to a very successful and safe Winter Olympic Games. (ARRL)

**

ENFORCEMENT: DON’T PLAY MUSIC ON THE AIR

The FCC has told three hams that they have been caught allegedly playing music on the air. In letters to the trio, FCC Rules Enforcer Riley Hollingsworth says that such transmissions are contrary to the Commission's rules regarding the Amateur Radio Service:

--

Hollingsworth: “We warned Ronald Marshott, N2NGY of Berkely Heights New Jersey, Frank Grzych W1FU of Johnston Rhode Island, Martin J. Bellingeri, W2OT, of Saddle Brook New Jersey and Zack Elliott K2BLU Haworth New Jersey about playing music on the 75 meter band.”

--

According to Hollingsworth the transmissions took place on 3.832 MHz on the evening of November 27, 2001. (FCC, RAIN)

**

ENFORCEMENT: FCC VS. K1MAN – CONTINUED

The saga of the FCC versus K1MAN continues. This as the FCC issues yet another letter to the Belgrade Lakes Maine ham. Among other things, this time the FCC is warning not to put phone recorded calls on the air. Riley Hollingsworth, is Special Counsel for Amateur Radio Enforcement the regulatory agency:

--

Hollingsworth: “We sent a combination warning letter and explanatory letter to Glen Baxter, K1MAN, of Belgrade Lakes Maine concerning deliberate interference, lack of station control, sending felony complaint affidavits to those whom he perceives were interfering with him; tape recording telephone conversations without permission and broadcasting them.”

--

In its letter the agency warned that it is also important for K1MAN to understand that if these matters are not resolved, his ham licenses will not be routinely renewed the next time he applies. Instead Baxter’s licenses will be designated for hearing before an Administrative Law Judge. In such a proceeding, the FCC says that Baxter would have the burden of proof to show that his licenses should be renewed. (FCC, RAIN)

ENFORCEMENT: ILLEGAL CORDLESS PHONE SELLER FINED

Remember those high power cordless phones that we reported on a few months ago. The ones found operating in the 2 meter and 220 MHz Amateur bands? Well an alleged source of some of these illegal devices has been told it will have to pay a hefty fine for selling them here in the United States.

On October 23, 2001, the Commission issued a Notice of Apparent Liability for Forfeiture in the amount of $7,000 to Electronics Unlimited of Miami Florida. This, for allegedly marketing of a non-compliant high-power cordless telephone called the Alcon AT 526.

The company was afforded ample time to reply to the allegations. The FCC says that Electronics Unlimited never did file a response. Based on the information before it on February 15th the FCC affirmed the forfeiture order and gave Electronics Unlimited 30 days to pay. If the Electronics Unlimited fails to pay the forfeiture within the specified period of time the FCC says that the case may be referred to the Department of Justice for collection. (FCC)

**

FM AND REPEATERS: UNYREPCO NEW MID VALLEY NY REPEATER COORDINATOR

Repeater owners and operators of other F M and packet relay devices in Orange, Putnam, and Sullivan counties in York State have adopted the Upper New York Repeater Council, Inc. to provide frequency coordination services. This was an area originally represented by the long defunct North East Repeater Association that went belly-up in the early 1970's. It then used the services of the Tri State Amateur Repeater Council until that organization disbanded a few years ago. Since then the region has been on its own.

This process of the Upper New York Repeater Council adopting the region was completed following a review of the existing systems by the established and recognized adjacent region frequency coordination councils. The change became effective February 13th.
More information is on the available on the web www.unyrepco.org (UNYREPCO)

**

EMERGING TECHNOLOGY: SURFING AT 39000 FEET

The Federal Communications Commission has granted Boeing a license to provide high-speed Internet service to airline passengers. Boeing said the FCC approval clears the way for its planned in-flight Internet service called Connexion. Connexion -- Spelled C-O-N-N-E-X-I-O-N -- will enable airlines and other commercial jet operators to offer real-time, high-speed Internet and intranet access, television and e-mail. This, while flying over United States territory and waters. (Boeing)

**

HAM RADIO IN SPACE: A TEACHERS GUIDE TO ARISS CONTACTS

Tony Hutchinson, VK5ZAI, says that he has updated his web site with a "Teachers Guide" for schools that have been selected to speak with the crew on the I-S-S. On his pages, Hutchinson provides what amounts to a final check list of things that must be done in the weeks prior to the contact taking place. Also posted is a list of the actual questions that students have asked in the past.

Tony Hutchinson is the Amateur Radio on the International Space Station Coordinator for all of Australia. To find his very interesting resource, take your web browser http://www.electric-web.org/teachers_guide.htm. (AMSAT-NA)

**

INTERNATIONAL - SOUTH AFRICA: SARL READIES FOR WRC 2003

The Independent Communications Authority of South Africa has invited the South Africa Radio League to participate in the preparatory work for the World Radio Conference in 2003. SARL President Hans Potgieter ZS6ALJ will be joining I-C-A-S-A sub-committee 4 which is tasked to develop South Africa's position on Maritime mobile, Amateur and Amateur Satellite, and broadcasting services in the Medium Frequency and High Frequency bands. A number of specific amateur related items are on the W-R-C agenda, including the realignment of amateur and broadcasting allocations around 7 MHz, and possible revisions to articles S-1, S-19 and S-25 of the international radio rules. (SARL, Q-News)

**

CONTESTS: VHF SPRING SPRINTS

Attention VHF and UHF contesters. K4AR has announced over the VHF Reflector that the VHF Spring Sprints will be held again in 2002. The Sprints are sponsored by the East Tennessee DX Association. The dates, official rules and lots of other information can be found at www.etdxa.org/vhf.htm (VHF Reflector)

**

DX

In DX, 9V1YC reports that the 2002 South Sandwich and South Georgia DXpedition is now officially over with all operators are back home safe and sound. 9V1YC says that the DX-pedition achieved all of its goals and made an astounding 70,428 QSO's using SSB, CW and RTTY. On-air time was 80 hours at VP8THU, and 7 days, 10 hours at VP8GEO. (RSGB)

And husband and wife K1CN and N1EBL are in the Bahamas and signing C6AMM and C6AWW from now until the 2nd of March. Operation is from Harbour Island, which counts as Islands on the Air number NA-001. (RSGB)

**

THAT FINAL ITEM: HAM RADIO SEARCH AND RESCUE

And finally this week, ham radio played a big role during a simulated emergency that takes place in a somewhat unusual setting and at an unusual time. From Birmingham, Alabama, Newsline's David Black, KB4KCH, reports:

--
Most emergency drills take place during the day, maybe in a parking lot or open field. But volunteers in Alabama put on their jackets and hiking gear and grabbed their flashlights for an exercise near Birmingham February 8th. The setting: Oak Mountain State Park, Alabama's largest park with 60-thousand acres and dozens of miles of trails. Members of the Vulcan Trail Association practice what they might have to do for real. James Pilman, KA4ZQA, is event coordinator:
--
PILMAN
BITE IN This is a search
OUT a couple more
--
Pilman assembles teams of experienced hikers teaming with amateur radio operators.
--
SOT1 IN Earl
OUT you're goin' out.
--
This search takes place at night. With temperatures in the 40s, three teams head out into the wilderness, maintaining a 2 meter contact with a Net Control at the park headquarters. Team members get a briefing on their missing person.
--
SOT2 IN There's a gentleman, he's about 28 years old
OUT at the marina
--
The sky is full of stars as teams walk up and down trails, looking for evidence of their target.
--
SOT4 IN We're starting out on the trail
OUT W4CUE
--
After about an hour and a half, one team finds its man and radios back in. The net closes, but only after each team arrives safely back at headquarters. Kenner Morrow is a naturalist with the Park:
--
BITE/KEENER IN The value is being able to coordinate
OUT there are any emergencies.
--
Ken Moore AB4WL, provided communications for one team. He calls it a rewarding experience.
--
BITE/MOORE IN Just bein' able to help
OUT participate and volunteer.
--
For Chuck Arthur, KF4SSX, tonight's exercise was his first search and rescue practice:
--
BITE/ARTHUR IN To me as an amateur
OUT into ham radio
--

In the past, these hikers and hams have helped search for missing adults and children during real emergencies, sometimes dealing with extreme cold and the hazards of rugged terrain at night. Tonight's drill went just about flawlessly. The people who took part in this event know they might get called again for real -- this night in the cold wilderness has helped them to be a little better prepared.

From Oak Mountain State Park, Alabama, I’m David Black , KB4KCH, for The Amateur Radio Newsline.

--

David says that the trail group usually holds two lost hiker searches every year. (KB4KCH, ARNewsline(tm))

Well in a sense, when you use EZ-DomainNameRegistration.com you are using GoDaddy. EZ is just a reseller of
GoDaddy. He just marks everything up by $3.00 or so. Go to www.godaddy.com and you can get the EXACT same
thing for a few bucks less.

Hmm, if he resells Godaddy.com, then what shows up when you go to
administer your domains?
I deal with Godaddy directly, and I can change where my domains point at
any time.
There are some registrars that do a bit more for you, but they charge extra
for that service. They just don't tell you about that.

Thanks for the link. There was no MIXDA when I was there, just MARC.
Getting to see KH2D and AH2S yelling at each other was probably one of the
reasons for the new club.

That's a bold statement that KH2JU makes. The military drawdown in the
early 90's must have taken a severe toll on the ham community there.

73, Brian

810. QSL info

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-27 17:03:53 UTC
From: hjohnc@core.com
Message-ID: <3c7d1186$0$98142$2c3e98f8@news.voyager.net>
Source record: 14286

Saw the info on 3D2CI and am waiting patiently for a card soon.

But, not as patient on the following cards. Anyone get any response
from:
K3J - Oct 2001 (I'm in the on-line log)
EZ8CQ - Oct 2001
E30NA - Oct 2001 (I'm in the on-line log)
FO/SP9FIH - Nov 2001
T2T - Nov 2001 (I'm in the on-line log)
S79AN - Nov 2001
5R8HD - Nov 2001
All were sent direct with $$. Is three months being impatient?

73 de K8HJ

Hello John,
I've waited as long as a full year and sometimes longer for a direct
card w/$$$. Sometimes I got a bureau card back in response to a direct
card w/$$$. And of course there are still dozens of cards out there
that will probably never get answered...

But..to answer your question directly I would say yes..3 months is a
bit impatient.

The Two Lessons that DX'ing has taught me...
1. geography
2. patience

...good luck OM....

Forgive the total ignorance, but I have been back in Ham Radio for a year now, and still don't know what a "LID" is.....

I have re-learned the protocol, and listened before I spoke and all that, but I just haven't seen any explanation of the definition of these nasty creatures... I just would like to know what it stands for and some details of where the term came from.

Hope this doesn't spark a bunch of controversy, I am just truly curious.

Dennis - W6NYC

My first QSO as a Noivce ticket holder was in the late 70's. I called CQ and was answered right away. I sent the station his report at a blazing CW speed around 6 WPM. To my amazement the other station then began his reply

"SO LID NICE COPY."

I couldn't believe the guy was bad mouthing me right at the start of our QSO calling me a LID!

Glenn

Hello Glenn,
It is a shame how some people in a "communications hobby" choose to communicate with their own peers. It is sad I know, but sometimes I listen to the "DX Cops" and "Frequency Police" that gather around a DXpedition's transmit frequency like moths to a porch light. Often times I break out laughing at the exchanges these guys make to each other..... maybe you know what I'm referring to...

Thanks for the nice Usenet message....

Glenn,

That's precisely the stuff that drove me out of the hobby. At least you had someone come back to you. By the time I got my novice tick (early 90s), I had to spend an AWFUL long time calling CQ to get anyone to respond. And when/if I did, they replied at way faster than I sent was 'QRQ'.

And we wonder why the hobby is slowly becoming a living caricature of itself.

823. Munged cards

Newsgroup: rec.radio.amateur.dx
Date: 2002-02-27 20:07:44 UTC
From: Robert Lyons <boblyons@umich.edu>
Message-ID: <3C7D3C90.F2027C01@umich.edu>
Source record: 14298

What will cause a DXCC card counter to disqualify a card? I mean aside from the obvious (invalid/deleted countries, etc). How about a card where some hand-written info is unreadable? I have one where I can't read the UTC entry, even knowing what it is. How about an altered callsign? The DXer apparently got a bad batch of cards with '4I' instead of '4L' in very bold letters. He inked in the change to 'L', and elsewhere the card states clearly it's from Republic of Georgia.

Just how carefully will these guys check my cards? What are common mistakes/pitfalls I might make?

Thanks, Charles, but I see no mention of what will get a card disqualified, aside from "All confirmations must be submitted exactly as received by the applicant. The submission of altered, forged, or otherwise invalid confirmations for DXCC credit may result in disqualification of the applicant...".

I have no intention of trying to cheat on this, so my cards are all "as received by the applicant". What I'm wondering is whether cards are ever rejected for something the DX did to them.

Thanks for the note - 73

Good idea - I'll probably do that. What I was hoping for, however, was some responses with 'war stories' of what cards were tossed and why. It's as much for the entertainment value of an interesting discussion as to prepare myself for submission (I'm not in any hurry - wallpaper isn't too important to me). 73 de Bob, KI8AB

Hello Bob,
I had an Ireland card rejected (now that I think about it) for DXCC because there was no date entered. This really floored me because I had "triple-checked" the cards. But sure enough when I got them back the omission was obvious. Fortunately I followed the advice of my "DX-Mentor" (N6KZ-Jim) and waited to submit for DXCC till I had about 105 confirmed cards. This way my rejected Ireland card did not prevent me from getting my DXCC wallpaper.

I also had a 17m WAS - Arkansas card rejected by the local checker up in Flagstaff..but once again I had some "spare" cards and just happened to have an extra Arkansas card that was accepted. As I recall the trouble with the original Arkansas card was that he made it out to himself!

Deleted countries are valid, so that isn't as obviuos as you might think. A card will be invalidated if it appears that your callsign has been tampered with or changed, or if the band or mode has been messed with. The signal report isn't a requirement. I have seen many cards where the old callsign of the dx sender was marked out and a new one inserted. This is common.

Hello Major...
At this link are several DX bulletins....some say email while others I think are USPO.....this is probably the best list one can find for DX bulletins....

http://www.ac6v.com/newsletters.htm

Personally, FYI, I really like The Daily DX email newsletter that comes each day. But I know you asked for mail type.

Still one can get a free two-week trial of the Daily DX (10 issues) by logging in at www.dailydx.com After three years I know it is the most up-to-date and accurate source of info for the active and serious DX'er..... I outta get paid for these spots! Anyway Bernie does a super job on it.....

the needs
> of the individual? Oops, forgive me, I see you're from Canada.<g> Clear
> thinking Americans have a different outlook on this.

sounds like a trekyism (which is by "Clear thinking Americans")
and the radios come to Canada from the US and are supposedly "Made in
America" (which is by "Clear thinking Americans") and the mods for the
rigs are located on web sites in the US (which is by "Clear thinking
Americans") where the largest radio toting population in North America
lives (which is "Clear thinking Americans")

hmmmm.... sounds like these "criminals" are stepping on some egos or
pride... one or the other, or both.

Frankly registering the sale of radio devices would be a good idea,
checking to see if dealers are asking for licenses, shutting down the
mod shops (some which are run by hams), FCC & DOC scanning and DFing for
out of band operation would be a start.

Remember though, everything started out on the honor system..... Emron
just showed us what was left of that idea, the signs of things to come
and what is here today. Maybe they should put the strap back in the
school, make it perfectly legal to grab the nabourhood punk by the
collar and drag him/her kicking and screaming down to the cop shop.

just my 2 cents

John -

Not on any of those in particular but on the general question of is 3 months being impatient, yep, believe so. Not unusual to take much longer than that for DXpeditions and other foreign sources. You get lucky once in a while, sent a card to a manager in Poland last month and got the card back 21 days after I put in the mailbox, wow.
I usually don't even think about them until at least 6 months then I start to wonder and after about 9 months I may send an inquiry, by email if possible, that has helped twice.
Good luck.

Sam

I have an old one (from FT5X) which was disallowed because the DX
station had sloppily written one of the letters in my callsign and then
corrected it. Of course, the ARRL has no way of knowing who made the
correction, so they disallowed it.

Good - I have a number of such cards. So it sounds like the time/date
markings are less important ... correct? I'll go through my cards and
remove the ones that have sloppily-written band/mode.

Thanks - Bob, KI8AB

I'm curious - how much do you send with each card - return postage only, or extra greenstamps? Were these all big-ticket DXpeditions, or single-op spare-time forays? I'm just wondering if I'm reducing my return rate on QSLs by usually sending just return-rate (IRC or a greenstamp or two) except for big multi-op DXpeditions (where I often send more).

Bob among my card collection are a few that were not accepted.
One for the Canal Zone where it was a CW contact and the card had a 59
report - so it wasn't accepted as a CW contact.
On the other hand, I received a card that had only 59 but the frequency
was in the CW portion of the band and it was accepted as a CW contact.

Another russian card had no indication of the frequency or band

Several for contacts I never worked (on CW - maybe AC6ST) I'm AC6V.

Another was a new DXCC entity and the date of contact was not indicated.
Sent it back and it was corrected.

Another card I sent direct with postage came back with my call sign
incorrect! Sent it back and it was corrected.

But most illegible ones and water smeared ones made it OK. Always use
indelible ink.
Hand made corrections by the sender always were accepted.

Deleted countries do count on your totals - current + deleted = xxx

It's a true story Peter, but I was a green novice when I fell for it.
My second QSO was something like this.

"FB SO LID COPY GLENN"

Same crap from these rude ops. It wasn't until my code speed increased
that they didn't insult me!

OTOH, I guess there is a difference between 6 wpm and reading it off a
screen.

Glenn

Maybe different card checkers have different levels of stringency.

.
.
.
> Hand made corrections by the sender always were accepted.

Glad to hear that. My Rep. of Georgia card isn't hard to replace, but I'm sure there will be others like it, modified by the sender.

An unrelated mistake a DX made with me a few days ago - I sent a card to a guy I worked in Jamaica, and received back a card for a contact from the Seychelles - same time, date and band, but wrong location! Now I'd love to work the Seychelles, but I don't want a card for a bogus contact.

Current Meaning --- An uninformed bad operator.

Origin -- Probably lost to the mists of history but here are some lore:

ORIGIN OF LID From URL: http://ac6v.com/humors.htm
My granddad was a railroad telegrapher. He said that the term lid
came from operators who would put the lid of a Prince Albert tobacco
tin on the sounder so they could copy the code easier. It was a
practice that was frowned on by operators who did not have to do
this and it became the slang used for bad operators.
They would also say that such an operator had a "tin ear".

73 Mark WA0DC

The best explaination I have heard was that if "lid" was not sent
properly in landline (American Morse) code, it sounded like "dd":
daaah, dit dit, dah dit dit. (daaah = long dash)
It was a basic test of a proficient operator.
73 JD, ac6pv

I have also heard that LID came from the early days of land morse.. an
operator who could not send well put a LID eg: slowed down the traffic

J. Gold WB2AFS

Actually no, it isn't the lid, but it is the can itself. The tobacco can was
shaped similar to a pocket flask but had a flip top metal lid on it. If you
removed the lid and stuck the can in between the sounder and the reflecting
box
then it amplified the sound and gave it a little rounder tone (removed some
of
the click).

Some of the local old timers tell me they would fill the tobacco can
with sand. Varying the depth of the sand changed the tone.

Bob -

I just send $1 or $2, whatever is requested. If a donation is "needed", I'd pony up. But, I'm not aware that the big dxpeditions (3D2CI, E30NA, K3J, T2T) or the individual operators required more.

BTW, I did get the 5R8HD card yesterday!

Long before they measured capacitance in Farads, they measured it in
"Jars". Does anyone know how many microfarads are in one jar?

I read today that ZK1TUG has been approved for DXCC credit. I will be submitting my cards for the first time soon. I have 292 cards to send in. How will I know what operations have been approved and which have not. What are the rules for an operation to be approved for DXCC credit. I have many different cards for some of my countries so I would like to include cards that will be accepted. I had not thought about this before, but I assumed all cards filled out correctly with a legal call sign would be accepted for credit.

Hi Ed -- maybe consider using an ARRL Card Checker in your area -- see
URL:
http://www.arrl.org/awards/dxcc/checkers.html

That way they are approved on the spot and you don't have to send all of
them to the ARRL.

My understanding is they can check most cards -- a few may have to be
submitted directly to the ARRL.
Phone numbers are included at the above URL, so maybe give them a call for
your questions and advice.

Also the specter of losing all the cards in the mail is eliminated.

I'm not a card checker, hence no expert. Card checkers can check most cards except 160 meter cards if they are within 10 years of the qso date. They do not have a list of 'good' or 'bad' callsigns. They verify the information on the card and look to see if there has been any obvious alterations. My preference is to make an appointment with a fellow across town and take my cards to him once a year, or wait for the local hamfest which always has a rep from the league checking cards, and get them done there. I also worry about losing those things in the mail. As far as being concerned about sending invalid cards, so far, I can recall sending 4. Two of those I knew in advance to be invalid, pending documentation, but sent them anyway, and later received credit when the documentation cleared. It is very unlikely that you are going to have many invalid cards. AC6V gave you good advice in looking up a local card checker. He won't be able to process anything older than 10 years, so pull those out and let him handle the rest. Good luck and good dxing.

862. Re: SSN or SFI? Which is better indicator of the days propagation?

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-03 02:53:29 UTC
From: Thomas Giella <kn4lf@earthlink.net>
Message-ID: <Jegg8.30064$ZC3.2443643@newsread2.prod.itd.earthlink.net>
Source record: 14238

Realtime SFI values are measured in Canada three times per day and can be
seen on the STD website at: http://www.spacew.com/index.html . Click on the
"Ham Radio" link at the top of the page, then "10.7 cm Solar Radio Flux". I
use the SFI because it's more readily available in real time.

866. MW RX Propagation Outlook #2002-7

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-03 16:28:41 UTC
From: Thomas Giella <kn4lf@earthlink.net>
Message-ID: <Zasg8.31260$ZC3.2550839@newsread2.prod.itd.earthlink.net>
Source record: 14242

KN4LF 7 Medium Wave Radio Propagation Outlook #2002-7 Published 11:00 AM EST 02/03/03 For 02/03/04-02/03/10

This 7 day mediumwave propagation outlook and other solar and propagation data can be found on my website at www.kn4lf.com/kn4lf5.htm .

Note! Due to requests from our fellow radio brethren in the international radio community I have adopted the date format of yy/mm/dd.

Per our forecast medium frequency propagation for the ARRL Worldwide DX Contest this past weekend was good, unfortunately our high lightning induced QRN level forecast also verified in North America.

PROTON FLUX-

During the outlook period of 02/02/25-02/03/03 the proton flux should remained below 10 MeV (10+0).

During the outlook period of 02/03/04-02/03/10 the proton flux should remain below 10 MeV (10+0)., barring any unexpected near side or far side sun proton producing solar flare events.

A proton flux level >10 MeV (10+1) creates elevated D absorption on medium wave frequencies, especially on high latitude propagation paths.

SOLAR FLUX-

During the outlook period 02/02/25-02/03/03 the daily solar flux ranged between 211 and 186. For February the daily solar flux values ranged from 257 and 188, as the "second" peak for current solar cycle 23 continues to slowly wane.

During the outlook period of 02/03/04-02/03/10 the daily solar flux levels should range between 215 and 180.

Unfortunately there will be no important F2 layer propagation openings on 6 meters during the next 7 days, however Sporadic E (Es) openings are probable.

High solar flux values are generally considered to be detrimental to propagation of medium wave signals both domestic and TA/TP, as more absorption can be present via the transmitted signals' two trips through the D layer. Most long haul medium wave DX signals in excess of 3000 miles is via the E Valley-F layer ducting and/or Chordal Hop propagation modes. Therefore high solar flux values can aid in long haul medium wave propagation paths in excess of 3000 miles, as a high solar flux value ensures a strong E and F layer duct mechanism. However high solar activity in the form of increase ionization created by ultraviolet and x-ray

radiation can fill in the E Valley region and interfere with the E Valley-F layer ducting mechanism. In a sense the E Valley-F layer duct is closed and the transmitted RF signal only propagates between the E layer and land/ocean surface, with a higher angle and more loss.

SUNSPOT REGIONS-

Solar region #'s 9844 and 9845 are currently the most active of the visible regions. They contain beta gamma magnetic fields that can produce M class level solar flares. SOLAR FLARES-

During the outlook period 02/02/25-02/03/03 the largest solar flare events were an M2 at 0010 UTC on the 28th and an M1 event at 1555 UTC on the 27th.

During the outlook period of 02/03/04-02/03/10 I place the likelihood of a C4 class or higher solar flare at 100%, an M5 class or higher solar flare at 30% and X1 class or higher solar flare at 10% and a proton producing solar flare at 5%.

An earthward facing M5 or higher class solar flare will move the proton flux above 10o (10 MeV) and initiate large scale high latitude propagation path absorption. Even smaller C4 flares can cause the hour to hour and night to night variations in signal strength on the AM broadcast band and 160 meters, both stateside and DX. as a transfer of increased density and RF signal absorption from the day side D layer to night side of the ionosphere occurs through high level neutral winds.

GEOMAGNETIC INDICES-

During the outlook period 02/02/25-02/03/03 the Kp index reached a level of 4-5 between 0900-2100 UTC the 28th. During the outlook period of 02/03/04-02/03/10 the Kp index should range between 4-6 due to a large geo-effective (earth facing) coronal hole. The Ionospheric Storm should begin on UTC Monday the 4th and visible Aurora activity is probable.

As the Kp index reaches 3 or higher, the aurora oval regions begin expanding equatorward in magnetic latitude and generally begin have a possible negative impact on mediumwave propagation.

A Kp index of 5 or higher begins to have a negative on high frequency shortwave propagation. However at times skewed path propagation conditions can compensate for high latitude propagation path auroral absorption.

If the path over which you are communicating lies along or inside one of the auroral ovals, you will experience degraded propagation in one of several different forms: strong signal absorption, brief periods of strong signal enhancement, which is mainly caused by tilts in the ionosphere that allow signals to become focused at your location or very erratic signal behavior in the form of strong and rapid fading, etc., caused by a variety of effects such as multipathing, anomalous and rapid variations in absorption, non-great-circle propagation, and polarization changes.

STRATOSPHERIC WARMING-

During the outlook period 02/02/25-02/03/03 extensive stratospheric warming occurred, as Arctic air was on the move from Siberian Russia across the north pole and into North America. This Arctic cold hit Florida with minimum temperatures of 14 deg and 19 deg. occurring on the 2/28 and 3/1.

During the outlook period of 02/03/04-02/03/10 elevated day and night time D layer medium frequency signal absorption tied to continued Stratospheric Warming is will continue, with continued Arctic cold at times invading the eastern 2/3's of the U.S.

As the stratosphere lies below the ionosphere, which is at mesosphere and thermosphere height, you might not normally expect to see stratospheric warming effect the AM broadcast band and 160 meter propagation in any way BUT mediumwave frequency signals do refract off of temperature inversions and moisture discontinuities and temperature and moisture inversions are involved with stratospheric warming. So it's possible that a mediumwave signal could do any number of things when refracting off of a temperature inversion, at any height.

Just as the E layer is the main refraction medium for medium wave signal propagation within approximately 3100 miles, so is Sporadic E (Es). Like stratospheric level warming and tropospheric level temperature and moisture discontinuities, Sporadic E can depending on the circumstances absorb, block and refract medium wave RF signals in an unpredictable manner.

OUTLOOK-

During the outlook period of 02/03/04-02/03/10 overall propagation conditions will be down a little compared with the past two weeks but increased power and good transmit and receive antennas will be helpful in overcoming the slightly poorer conditions.

Expect good domestic propagation in both hemispheres out to approximately 3000 miles on the MW broadcast band and 160 meters.

High latitude northern and southern hemispheric, (TA) Trans Atlantic, (TP) Trans Pacific and cross equatorial propagation conditions should be poor and at times fair on the MW broadcast band and fair to at times good on 160 meters.

Mid latitude northern and southern hemispheric, (TA) Trans Atlantic, (TP) Trans Pacific and cross equatorial propagation conditions should be fair on the MW broadcast band and good on 160 meters.

There will be high lightning induced QRN in parts of North America during the next 24 hours and some occasional lightning induced QRN across the northern hemisphere, with an endless series of winter time approaching cold fronts and surface extra-tropical low pressure systems and considerable seasonable lightning induced QRN across equatorial regions and the southern hemisphere.

Unfortunately the northern hemisphere is moving into the elevated QRN season due to increased lightning producing thunderstorms. With a building El Nino pattern the frequency of lightning producing thunderstorms will be above

normal in March and April, putting an earlier end to medium frequency Dxing, compared to Spring of 2001.

I just sent in my first batch of cards - after 33 of hamming I decided it was about time to collect some wallpaper. Because some of the QSOs were older than 10 years, I submitted everything I had that was "old" for my initial DXCC qualifications. From here on out, I will be able to use the local card checker because all of my subsequent DXCC submissions will be recent QSOs.

One question for the group: does the "10 year old" rule apply for WAS as well? I wanted to go to the local card checker for Worked All States and wonder if he can check only recent cards? If not... I'll have to send my WAS submission to Connecticut also.

I don't believe there is any time limitations on the WAS program, but again, it is a good idea to send an email to the league office and ask them first.

I remember those... or at least saw drawings/ pics of one..... tin
foil lined Mason Jar with a copper ball on a pin in the center of the
lid. As for the value of the capacitance.... couldn't tell ya

About 5 or 10 years ago there used to be a good 40 M SSB DX net. About 0600 gmt on. I cant even remember the calls of the net controls, I think one was K0VVV.
It was a great way to work SSB DX on that band. Since the net usually found a good spot that was free of SW stations for the DX.
Does anyone know if this net is still around.
Trying to work some DX this past weekend was tough on 40. The DX was very loud, but I am sure they had lots of SW interference, along with the contest QRM. But other then contests I never really hear DX listening up. And 40 meters can be a very good DX band.

Hope this is an appropriate ng - can't find rec.radio.amateur.contest

I worked 38 US states with 10W from a K2 into a homebrew 102' doublet at 35' - some of the contacts required great patience and tenacity on behalf of the US op.

Just a THANK YOU for all those stations who are prepared to sacrifice just a little of their hourly rate to strain to work us little 'uns. I realise that my ever closing WAS (just need 7 including HI) is entirely due to large antennas, good RX, good ears and a lot of patience your end.

Thanks guys and I hope your reward was in your score log!

And&#65533; I would like to thank the hams of the countries around the world for coming up into the U.S. area of the bands for the contests! It gave them points, but also gave us an opportunity to finally &#65533;pick-up&#65533; some of the &#65533;tougher&#65533; ones on 10 meters. We had decent band conditions and great cooperation. I think that was fun.

Just an old man I guess, but I am still amazed that I can sit in my house with 100 watts and a ground mounted vertical antenna and talk to 42 countries in one day. Yup, still magic to me, and I like it that way.

Thanks again,
Dennis - W6NYC

Hello All.

During the ARRL International DX Contests I made contact with a US station.
I had to E-Mail him as I couldn't read my own writing. In his reply he
mentioned that the Xmitter was at his house, in fact he was not operating in
the Contest so a 'Ham' friend of his came over and used the Xmitter.

Who should I write into the log.

(a) the owner of the xmitter as it did notleave his property or
(b) the friend who came and used it.

I would be very grateful for any help.

If I get it right: a callsign does belong to a station rather than to an operator,
so let's assume W1TX is the QTH and K1OP is the operator, the contact should be logged as (and his log should be submitted as) W1TX, and in small print "operated by K1OP"...

Is my assumption correct?

Under US law this can be done two different ways:

- The friend could operate the owner's station as a "guest operator", using the owner's callsign.

- The friend could operate portable - making the station technically his for the duration of his operation, using his own callsign. It is no longer necessary to sign /P or anything like that in the USA.

I would log whichever callsign the operator was using. And, the location where the transmitter actually was. (i.e., the owner's location)

|Anybody know who the QSL manager is for 5H3RK?

Good question. My log shows that I sent via the bureau, but that is the default setting and I might not have changed it to the method I actually used. I received the return card direct from Tanzania. However, it wasn't in a return envelope which I always send direct, so that does strongly suggest I used the outgoing bureau.

The direct address from the card is:

Ralph Karhammar
P. O. Box 9274
Dar Es Salaam
Tanzania

Ralph is also holds SM0LRK and VK4VB which is what QRZ shows for the QSL manager.

Message-ID: <3C865CA1.B50A62CC@amsat.org>
Source record: 14180

Wednesday morning (03/06/02) Deep Creek Elementary school in Oregon is scheduled to make a direct Ham radio contact with the International Space
Station from 11:01 until 11:11 AM. We should be able to listen in a bit from San Diego from about 11:04 until 11:11. It's only an 11 degree pass

for us but some of it should be heard even with an HT. The frequency to listen on is 145.80 FM and of course only the ISS transmissions can be heard.

The audio of the contact will be carried live on MSNBC.
You can click on this link:

http://www.msnbc.com/m/lv/default.asp

and you should see an entry for the Space Station contact with Deep Creek.
If you are there right at 11 AM on Wednesday, you will be just in time.

Thanks W6VR & N6IZW

That may have been VP5A you worked. KP5A was never spotted during
the contest.....

QSL for VP5A to:

John E. Rodgers, WE3C
441 Walnuttown Road
Fleetwood, PA 19522
USA

73, Jim KH2D

Hello Chet,
I could not scare anything up anywhere for KP5A that had anything at all to do with Ham Radio. Is it possible you actually worked VP5A (who -was- active in that contest) but heard wrong or logged wrong?
Just in case here is the qsl route for VP5A...

I found the following qsl route for VP5A

John E. Rodgers, WE3C
441 Walnuttown Road
Fleetwood, PA 19522
USA

Hello everyone,

Just want to bring up an idea I have & perhaps some of you follks can help me out with it. I'm planning a trip to Cozumel, Mexico this May and would like to bring along my Icom 706 to do some operating while I'm down there. What is the best way for me to obtain a reciprocal licence for Mexico? I have read the info on the ARRL site and found that many have obtained their permit at the nearest state capital after arrival. For Cozumel, that would require a trip to the city of Chetumal on the Quintana Roo mainland. (long bus/boat ride or expensive plane trip) On the other hand, I also read on the ARRL site that licences for island operation can only be obtained in Mexico City. All in all this is seems quite impractical and confusing.

I've been to Cozumel several times and the scuba diving is world class, food is great, prices are very reasonable, wonderfull people, I love it there. To be able to operate my rig and work some DX from this great locale would be icing on the cake for a great trip!

Anyone have any experience in doing something like this in mexico? Is it possible to obtain the permit before leaving home? Would love to hear suggestions, advice, or anything that might help. Thanks very much,

M Perry

1) Get 2 copies of your ham license
2) Go to nearest Mexican consulate and get a tourist card
3) Take all this to nearest Secretaria de Commicaciones y Transportes
(SCT) office across border or near your destination and pay the
reciprocal license fee. About $75 for duration of tourist card.

Don't know where you are located, but this is the procedure in San
Diego/Tijuana to get a Mexican reciprocal license in advance of visiting
Mexico. Mexican consulate should be able to direct you to SCT. Good
luck!

I hate to rain on your parade, but I just obtained another Mexican
reciprocal license a couple of weeks ago, while in Mexico City
as a member of the US delegation to an international radio regulatory
conference.

While our Mexican hosts were (from my experience typically)
hospitable, including a senior official from CoFeTel (the Mexican
"FCC") sending me with one of her staffers ... in her car ... from
the conference hotel to the appropriate office(s) (you have to go
to more than one), then to the bank to pay the fee, then backwards
to the office(s) with the receipts, etc. to finally pick up the license
(about a 4 hour operation with a route that is so confusing that I
would NOT recommend it without the sort of guide that I had),
the license STILL prohibits contest operation (not that I care about
that) AND operation from Mexican islands.

I specifically asked if they meant places like Cozumel, or just more
outlying, perhaps ecologically sensitive islands. The answer was
"sorry Senior, no islands, period." (and I was sitting in the office of
and dealing directly with the head of the department that issues
reciprocal licenses to foreigners ... with a certain amount of "skid-
greasing already having been done ahead of time ...)

> I've been to Cozumel several times and the scuba diving is world class,
food

To
> be able to operate my rig and work some DX from this great locale would be
> icing on the cake for a great trip!

Agreed that the diving, food, etc. in Cozumel is great ... but getting
a license to operate there may turn out to be virtually impossible.
(and I would NOT recommend "winging it" if you get my drift ...)

> Anyone have any experience in doing something like this in mexico? Is it
> possible to obtain the permit before leaving home? Would love to hear
> suggestions, advice, or anything that might help. Thanks very much,

If you live near a Mexican Consulate, you may be able to do so ...
also, since you have a 6 call, if you're within traveling distance of
TJ, it used to be possible to get Mexican reciprocal licenses there
with a minimum of hassle ... but that was in the '92 time frame and
I don't know how that situation may have changed ...

I don't understand why the "no islands" thing, but it seems to be
a pretty firm thing with them ...

73,
Carl - wa6vse

Mexico is not the US. They have no illusions about making it easy
for "ordinary folks" to get permits or licenses of any type.

>Anyone have any experience in doing something like this in mexico? Is it
>possible to obtain the permit before leaving home? Would love to hear
>suggestions, advice, or anything that might help. Thanks very much,

Depends on who you know and who THEY know, and the size of the salad
that you buy the local radio inspector (I heard that phrase used by
one on a visit to the US).

Serioulsy, check with ARRL HQ which maintains a file of "how to
get things done" in foreign countries. IIRC we do not have a
separate reciprocity agreement with Mexico, but they may be included
in the Inter-American treaty (CITEL). If so, you would have to get
an International Amateur Radio Permit, which is like an International
Driver License, to avoid a separate proceedingin Mexico.

The US issuing agent for the IARP is the ARRL, so check with them.

Vaya con Dios.

Mexico hasn't signed the CITEL agreement on IARP,
so an IARP is worth zip nada in Mexico.

CITEL is, however, TRYING to "encourage" member
countries to sign on to recognize the IARP ... however,
while I love Mexico, I suspect that the approximately
$82 fee for a 6 reciprocal permit (valid for a maximum
of 6 months, or until your tourist card expires) is a factor
in motivating them not to rush to sign on ...

Hi Doug and Cindy,
I know the owner's manual is no longer available from Kenwood. I was
able to get the External Control manual from them. Another source is
www.manualman.com in N.J., I've had good luck with him, and prices are about
the same as W7FG.
Good luck, Greg K3EWZ

927. Basic DX/QSLing Questions

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-09 01:12:13 UTC
From: Cathexis@yourhaterols.com
Message-ID: <3c895bdb.350533251@news.erols.com>
Source record: 14103

Greetings,

Getting a little more interested in chasing cards lately.
Would like to ask for opinions. Let me say, I realize the QSL
exchanges are not a sure thing. Just thought I'd bounce a
few ideas at the ng and see what I get back.

Right up front: I don'terrally want to use the Buro. I'm
content to go direct. No offense to ARRL, just rather not and
seems a lot quicker. Yes, more ducats, but I''m not after 350+
entities (yet) so that's OK.

Problem is, I notice many DX say something like,
" Don't worry - OK in Buro." and then move on before I
can suggest I don't mind direct. So I guess what I'm looking
for is advice on going direct. And will they get pissed off when
a direct shows up -- even with the greenstamps, etc. ?

Also, ALWAYS use 2 greenstamps? Even in Euro.?
Last I heard mail was pretty good in most of europe. It's got to be
better than Chad or such ! How likely is it that the DX will not reply
just 'cause he/she gets an IRC instead of 2.00US ??

And what about those "Chads" and such? Is te Buro the only
way short of hopping a flight? I have read on the issue. I just had a
friend return from 2 years in Morrocco : Every single peice of mail she
ever recieved was already opened by the time she got it. We finally
figured out the only way to help her out with goodies (Peace Corps)
was to open an account in Intern'l bank and then have her go to
local branch in-country and apply for ATM card or make withdrawals.
(Nice to know they appreciate all we do for them, Hmm?)

So I guess that's most of it : How successful is going Direct ? And
when to use the Buro instead ? I don't travel overseas, or have friends
who travel overseas (anymore) so "networking" is not an option. It's one
mail service or the other.

Thanks,

KG4JBM / Andrew

Guess I'm missin' something, but the QSL info on qrz.com says...

"QSL REQUIREMENTS: > SASE + 1 IRC + US $ 3,- <"

Let's see.... upload logs electronically, then QSL via Germany.... with a couple of thousand contacts a month, this sounds like a good way to make a living....

Have QSO with HK0TCN on 40m SSB - 28/02/1998
Sent 3 times request with $ to his address:

Victor Tesone
P.O.Box 464
San Andres Island
Colombia, SA

without reply
unable to duplicate the QSO and need San Andres for my DXCC.
This area is extremely difficult for me due to the presence of high
mount in that direction. Able to have QSO only on lower bands and with
great difficulty.
Someone of you have suggestions ?
Thanks

Try CW. HK0VGJ is a reliable QSLer (and a good operator). Plus the various holiday trips, which mainly seem to focus on CW. Worked HK0GU (DL7VOG) recently and he is a very reliable QSLer too.

I need help picking the best 6 meter vertical antenna.
I think I have narrowed it down to:
Hy-Gain V-6R
Diamond DP-GH62

Has anyone ever used these two antennas and if so wich are the best in
radiation, gain, and quality.

THANX!

I tell ya what. I'm sure the Hy-Gain and the Diamond do is very nice job. I used a Lakeview Colinear several years ago on 6, with VERY good results. It is very inexpensive too! Non of these do as well as a good beam or quad, but for the money, the Lakeview did an excellent job! http://www.hamstick.com/

I sent my QSL 2 times to Box 464 San Andres before I got a card maybe
it would help to send the letter registered mail. That is how I got my
Lybia card it is expensive but it might work.

hey jeep
i used a mosley diplomat for 6 meters its a 5/8s wave vertical with a
ground plane under it i had one at 60 feet and it was nearly only a DB or
so off what my 5 ele yagi was that was at 50 feet
i think they still make them but when buying from them be paitent they
take a long time to get things from

Hi there andrew...

I guess that when you send a SAE and 1 IRC or 1 US$, most EU stations will be glad...
There are some excpetions maybe, but can't think of any.

Personally I did the calculation: greenstamps are better than IRC's because 1$ equals more then the exchange of 1 IRC.
Also keep in mind that we like to put the destination address (in casu yours on the SAE) in the ' lower right half', approx. 2cm from the bottom edge of the envelope, and not in the middle or left...

My personal advice: just use the buro, and only send "directs only" or rare-ones (like places without buro) via the snail-mail...
Buro goes fast enough, just make a lot of contacts and send some cards yourself!

73 de Franki ON5ZO
100% QSL via the buro

From today's Ohio/Penn DX Bulletin #553 - 10-Mar-2002

VP6/D, DUCIE ISLAND. There were no press releases over the past week to report on. The VP6/D team should be leaving Mangareva, French Polynesia, (March 12th) to head to Pitcairn Island by the time you read this. They will pickup supplies and operators, and then head to Ducie Island (two day trip). Activity should take place by the weekend. Keep watching the following Web page for updated details at:

Amateur Radio Newsline™ Report 1282 – March 8, 2002

Amateur Radio Newsline report number 1282 with a release date of
Friday, March 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The Dayton Hamvention announces the EMMY AND OSCARS of Amateur Radio. We have the winners on Amateur Radio Newsline report number 1282 coming your war right now.

(Billboard Cart Here)

**

HAMVENTION 2002: AWARD WINNERS NAMED

The Dayton Hamvention has named Radio Amateur Information Network founder Alanson “Hap” Holly, KC9RP, as its 2002 Radio Amateur of the Year. Holly received the news of his selection on Thursday evening February 28th in a phone call from Cathi Hoskins, N8ZCQ, who chairs the Hamvention Awards and Banquet Committee. KC9RP tells Amateur Radio Newsline that he was completely taken by surprise:

--
Holly KC9RP: “I was absolutely stunned! In fact, all I could say was me? I mean seriously, I was just absolutely floored.”
--

Holly, lives in Des Plaines Illinois has been licensed since 1965. He began his ham radio informational programming career in 1984 on a local Chicago Area repeater. This eventually lead him to become founder, moderator and guiding light of a weekly amateur radio audio feature magazine known as the RAIN Report.

--
Sample audio from Rain Report.
--

RAIN programming is distributed to hundreds of repeaters across the country via a telephone dial-up line, the rainreport.com website, by a subscription tape service and broadcast over W-A-Zero-R-C-R's weekly 160 meter informational net.

But that’s is only a small part of the Hap Holly story. Originally licensed in Escondido California at age 14, Holly who has been blind since age 7 served as a phone-patch station and net control for the famed WESTCARS traffic net until 1970. He then headed off to Principia College in Illinois and from 1970 to graduation in 1974, ran phone patches and kept radio schedules for many of

his fellow students.

Holly graduated Principia with a Bachelor of Arts degree in Sociology, and soon found himself in the Chicago area. There, he sought out world-class jazz accordionist Leon Sash, to pursue further training in music. As a professional keyboard player, Holly’s diverse repertoire of American music of the past six decades has made him a popular choice in the Chicago area.

Hap met his wife-to-be while he was teaching a class in non-visual perception to high school students at a summer camp in Buena Vista, Colorado. The two were married in August of 1976. Stephanie, who is sighted, received her ham ticket and KA9WKD callsign in 1986.

Over the years, Hap Holly has written articles for the Spec-Com Journal, Radio Scan Magazine and occasionally reports for us here on the Amateur Radio Newsline. Holly is also a common sight at the Dayton Hamvention, taping forums which are then incorporated throughout the year into his RAIN Reports. And since 1975 KC9RP has been an honored member of the Des Plaines Lions Club. He has also been a member of the Des Plaines Toastmasters since 1976. He and Stephanie are also active with Des Plaines Illinois Emergency Medical Alert system.

Named as this years Hamvention Technical Excellence award winner is Alan Waller, K3TKJ, of Laurel, Delaware. Waller was chosen for his work that lead to the interfacing the Internet to Amateur Radio.

First licensed in 1961, Waller combined his decades-long love for Amateur Radio and a burgeoning interest in the then-new Internet to design and manage the www.qsl.net and www.qth.net web sites. That was back in 1993. Since that time, Alan Waller's web sites have come to serve the needs of tens of thousands of ham radio operators worldwide by providing a vast technical reference platform, an electronic mail service, web page hosting services, and links to thousands of other ham radio related sites. And in the true spirit of the Amateur Radio, Waller's initial work utilized leading edge experimentation to see what could be done with the technology then available. This has developed into a mature, reliable service to the world wide ham radio community.

Rounding out this seasons winners are a pair of pair of space exploring hams who have been named as co-recipients of the 2002 Hamvention Special Achievement Award. Former astronauts Owen Garriott, W5LFL, and Tony England, W0ORE, are being honored for paving the way for manned ham radio operations from the space shuttles that has made ham radio a permanent part of mans exploration of space.

Owen Gariott, W5LFL was first. On November 28, 1983, Garriott, was launched into space aboard the space ship Columbia for the STS-9 mission. It was the Spacelab 1 mission and Garriott brought along the first Amateur Radio station on a crew-tended space vehicle. It was a simple Motorola hand held transceiver connected to a special antenna designed to fit in the Space Shuttle’s window.

Three days later, W5LFL came on the air and hams across the United States and around the world were witness to a historic radio transmission:

--
Owen Garriott W5LFL: “This is W5LFL in Columbia. W5LFL in Columbia orbiting the Earth at an altitude of 135 nautical miles passing over the U.S. West Coast and calling CQ.”
--

Among those who heard Owen Garriott's Amateur Radio transmissions from space was Lance Collister, WA1JXN of Frenchtown Montana. Collister, who is now W7GJ, is credited with being the first amateur to work an astronaut in orbit. Take a listen:

--
Lance Collister WA1JXN/W7GJ: “W5LFL on Columbia, WA1JXN, W-A-1-Japan - Xray-Norway, WA1JXN Frenchtown Montana standing by.”

Owen Garriott, W5LFL: “Hello W1JXN, WA1JXN, WA1-Juliet-Xray-November. This is W5LFL. You’re our first contact from orbit. WA1JXN, how do you read? Over?”
--

The success of Garriott’s mission lead to the development of SAREX -- The Shuttle Amateur Radio Experiment. And, over the years, SAREX permitted youngsters in classrooms around the world to speak directly with astronauts in space. But for this to happen, the technology of manned ham radio operations from space had to be enhanced. This aspect of the then new SAREX program fell to the next ham radio operator orbited: Tony England, W0ORE.

W0ORE flew into space on the shuttle Challenger in 1985. It was Mission 51F, Spscelab 2. In addition to the 2 meter FM voice gear, Tony England also had with him the first ever ham television station to go into space. Slow Scan yes, but capable of sending back high resolution images which hams on the ground equipped with SSTV gear could view live or record on a simple audio cassette for later viewing and historical archiving. From space, Tony England described the station he was using:

--
Tony England, W0ORE: “Essentially we’ve got a commercial TV camera that anyone could go out to their local radio store ant buy. We feed this into a scan converter built by a commercial outfit and modified by NASA Amateur Radio clubs and this takes a snapshot of the scene and digitizes it and put it in a memory.

Then its sent to a handie-talkie like this. From there we will send it over a wire up to the upper window upstairs and to this antenna when I get it up there in the window. Then it will be transmitted to the ground.

When we get going, we will be able to send color TV images of what we are doing on board as a series of snapshots updated every 10 or 20 seconds. Amateurs anywhere on the ground will be able to receive them, and ones with scan converters will see the pictures.”
--

That flight also marked another first. The first ever two way television -- ham radio television -- to and from space.

Tony England went on to flight prove both the improved FM voice and then new SSTV systems. The SSTV was so successful that NASA gave very serious consideration to a permanent installation on all shuttles for back up communications. More important, the early on-orbit operations by Own Garriott W5LFL and Tony England W0ORE made possible the thousands of educational contacts between children in school classrooms and the crews flying in space. First, on board the shuttles, and now as a permanent part of the International Space Station.

Hap Holly KC9RP, Alan Waller K3TKJ, Owen Garriott W5LFL and Tony England W0ORE will receive their honors at the Hamvention Awards Banquet slated for Saturday evening, May 18th at the Nutter Center in Dayton Ohio. Amateur Radio Newsline will be there to bring you this story and all the news about Hamvention 2002. (ARNewsline™ from Dayton Hamvention® news release. Some audio from "Amateur Radio's Newest Frontier" and "SAREX - The Shuttle Amateur Radio Experiment" video presentations)

RADIO RULES: FCC RESUMES VANITY PROCESSING

Vanity license processing is getting back on tract. According to a Legaue bulletin the FCC now has all outstanding vanity applications filed last October in hand and is ready to resume routine vanity processing. Until recently a single missing vanity application had been holding up a backlog of more than 2000 vanity applications. The FCC credits the ARRL in part with helping to locate applicants and resolving the problem. (ARRL, FCC)

**

RESCUE RADIO: AMATEUR RADIO EMERGENCY COMMS SUMMIT

The first ever Amateur Radio Emergency Communications summit was held in Indianapolis last week. Amateur News Weekly's Jack Parker, W8ISH, reports on the success of this first meeting.

--
They came from the Red Cross, Salvation Army, ARES, RACES and even CB-radio's REACT team. Two dozen representatives of different Amateur Radio emergency communications groups met in a Federal Building training room to find ways of helping local and state emergency management organizations. The summit was organized by Marion County ARES director Mike Palmer, N9FEB. Palmer cited a need to develop better communications and cooperation between the different groups.

Many amateurs wear two or three different hats when it comes to providing public service. Palmer wants to identify those who are willing to help and to better utilize the voice and data communications available in the Marion County Amateur Radio Community. Many of the summit participants agreed this type of effort is long overdue.

Members of Army-Navy and Air Force Mars, as well as the Indiana Wing of the Civil Air Patrol offered their services during times of disaster. Everyone agreed this was a good start and look forward to future efforts to better train and organize Amateur Radio Emergency Communications in Marion County and Central Indiana.

Reporting from Indianapolis for Amateur News Weekly, this is Jack Parker W8ISH.

--

According to Jack, everyone came away from the meeting knowing that cooperation between groups is a key element in providing better service to the public. (ANW)

**

RADIO RULES: FCC ADOPTS AMBER EAS EVENT CODE FOR CHILD ABDUCTION CASES
The Federal Communications Commission has announced the adoption of a Report and Order amending the Emergency Alert System rules. Included are several new EAS event and location codes, which broadcast stations and cable systems may use to alert the public in the event of state and local emergencies. Of these, a new Child Abduction Emergency event code may be the most interesting to hams involved in Search and Rescue and who have E-A-S decoders installed in their repeaters.

The plan is described as a voluntary partnership between law enforcement agencies and the media that will be used to alert the public of serious child abduction cases where police believe that the child is in danger of bodily harm or death. Under the plan, radio and television stations will be permitted but not required to interrupt programming to disseminate information concerning serious child abductions when the new Child Abduction Emergency code is received. It could also be used by hams as an automated call to action to help find a missing child if used to activate an E-A-S equipped Amateur Service repeater.

Police departments say that every minute counts in dealing with an abducted child situation. In adding the Child Abduction Emergency code the FCC says that its responding to public concerns. (FCC)

**

ENFORCEMENT: FCC COMPLETES GEORGIA ARRL VEC EXAM SESSION AUDIT

The FCC has wrapped up an investigation into apparent irregularities at five ARRL VEC-sponsored Amateur Radio examination sessions in Georgia during 2000 and 2001. As a result of the probe, FCC Special Counsel Riley Hollingsworth says that several examinees will be called back for partial retesting:

--
Riley Hollingsworth: “We determined reviewing all of the information that was brought to our by the League that eight examinees will have to be retested on the code element. The ARRL has also relieved ten VE’s of their duties as volunteer examiners.”
--

According to the ARRL Letter, all V-E’s who might have been involved were suspended after the FCC investigation began last year. (FCC, RAIN)

**

ENFORCEMENT: A REPEATER OUTSIDE OF THE BAND

The FCC is also looking at the operation of repeater in the Metro New York City area. Again, the FCC’s Riley Hollingsworth:

--
Riley Hollingsworth: “We opened an inquiry into allegations that an uncoordinated repeater operated by Thomas Batista, KC2DDD, and Gerardo Arias, N2IFU, in Corona and Staten Island New York. Now that repeater is not only causing interference to a coordinted repeater, but the input is apparently on a frequency not even allocated to the Amateur band. So, needless to say we are real interested in reviewing that response when it comes in.
--

What Hollingsworth will be looking for is an answer to why the machine is using 143.020 MHz as an input frequency as well as why its on the air without coordination. 143.020 MHz is a full 800 Kilohertz below the bottom edge of the 2 meter Amateur band. (FCC, RAIN)

**

CONVENTIONS: SOUTH EAST VHF SOCIETY CONFERENCE

On a far lighter note, the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27th in Oak Ridge, Tennessee. And they too are putting out a call for papers. If you are interested in participating, please contact KG4QDZ by e-mail to kg4qdz@arrl.net. (VHF Reflector)

**

CONVENTIONS: CHARLESTON HAMFEST MARCH 16

And the 18th Annual Charleston Area Hamfest and Computer Show will be held Saturday, March 16, 2002 from 9 AM to 3 PM at the Coonskin Armory in Charleston, West Virginia. Talk-in is on the 145.35 MHz repeater. Admission is $5 and there will be free parking. More information is available by e-mail to n8tmw@arrl.net. (N8TMW)

HAM RADIO POLITICS: NCI LEADER CALLS FOR ELECTIONS

Bruce Perens, K6BP, the founder and an incumbent director of No Code International says that its time for new directions for the group and has called for elections. Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--
According to Bruce Perins, K6BP, when he started NCI in 1997, he never dreamed that it's goals would be achieved so quickly. But says Perins; "we are most of the way there."

Perins notes that last year the International Amateur Radio Union voted to ask for the removal of the international treaty provision requiring Morse Code testing for Radio Amateurs. Now Perins observes that even ARRL has voted in favor of removing code requirements from the international Radio Regulations.

With what he terms as -- no remaining credible opposition to NCI's cause left on the international level -- Perins says that it is time to turn NCI's focus to domestic policy. He says that for NCI to take an appropriate role in the end-game of the no-code battle means cooperation with national societies like the American Radio Relay League. And to do this, Perrins believes may take some new people.

So Perins has asked that an election for new directors be held no later than April 30th of this year. He also says that any person who was an NCI member on December 31, 2001 can be a candidate for director, and is eligible to vote in the election.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

More information about No Code International is on the web at www.nocode.org. (ARNewsline with information from K6BP)

WRTC-2002: ORGANIZING COMMITTEE ANNOUNCES THE COMPLETE LIST OF OFFICIAL ON-SITE REFEREES

The WRTC 2002 Organizing Committee has named a full list of on-site referees for the upcoming games. The committee says that it received more than 100 highly qualified applications and those chosen were from that group. A full list of referees and other information is available on the web at www.wrtc2002.org (WRTC2002)

**

DX

In D-X, word that Dave Cree, G3TBK, has returned to work in the Caribbean. Throughout March Dave will be active as J88DR from St. Vincent. For the first two weeks of April look for him J3 slash G3TBK from Grenada. Operations will be on all bands, but concentrating on the WARC bands, mostly on C-W, but with some SSB. QSL to Dave's home call either direct or via the RSGB bureau. (RSGB)

The New Zealand Amateur Transmitters Society is warning hams world wide of what they say is a pirate operation. According the NZART News, a maritime mobile station using the callsign ZL2TO and the name Tony has been heard recently operating on nets on 15 Meters. This station currently gives his location as the Cape Verde Islands. Only one problem. The ZL2TO call sign is allocated the Waitara Amateur Radio Club. (NZART)

And the South Africa Radio League news service says that anyone who has held a QSO's with 7Q8 slash ZS6GH or C9 slash ZS6GH should write them off . SARL says that these have been declared null and void because license or authorization to operate was issued by the telecommunications regulators in Malawi or Mozambique. (SARL)

**

THAT FINAL ITEM: NOMINATIONS SOUGHT FOR THE YOUNG HAM OF THE YEAR AWARD

And finally, we started this weeks newscast with a story about awards. Lets end it on a similar note as we here a Amateur Radio Newsline officially open the 2002 nominating season for our own Young Ham of the Year Award.

The Young Ham of the Year award was created in 1986 by amateur Radio Newsline producer Bill Pasternak, WA6ITF, to fill what he viewed as a void where younger members of ham radio society were often overlooked:

--
Bill Pasternak, WA6ITF: “When I was a young ham in the 50’s and 60’s the good deeds of young hams were often overlooked and ignored. When I grew up I was fortunate enough to be in a position to remedy this and thats how the Young Ham of the Year Award program came about. Thats how it came into being”
--

The award as originally envisioned as very low budget. One idea was for a certificate that would be mailed to a ham, age 18 or younger who had shown some exceptional ability or performed some heroic deed that set him or her apart from the crowd. When Bill mentioned the idea to Chip Margelli K7JA, of Vertex Standard back in the company’s days as Yaesu USA, the idea quickly expanded. Margelli offered company support on the spot:

--
Chip Margelli, K7JA: “When Bill Pasternak gave me a call and dsescribed the project to me in the tiniest bit of detail it was obvious that this was a no-brainer and something that we as a company at Yaesu wanted to encourage. So, I jumped at the opportunity to be a major contributor and it has been a great project ever since.”
--

The award now had substance, but it lacked a permanent home. One was found in 1993 when it was invited to the Huntsville Hamfest:

--
Bill Pasternak, WA6ITF: “The way we got to Huntsville? Simple. We advertised. We put a notice into the newscast that we were searching for a permanent home. The answer came in a note from Scotty Neustadter, now W4WW, who is the Huntsville Hamfest Chairman. Scotty basically said bring it to Huntsville. And we did.”
--

While the presentation ceremony did go to Seaside Oregon in 1994, it returned to Huntsville in 1995 where it has been ever since. And in 1996 a second major corporate underwriter came on board. C-Q Magazine. Rich Moseson W2VU, is editor:

--
Rich Moseson, W2VU: “We at CQ have always thought that it is very important to promote Amateur Radio to young people and we saw that co-sponsorship of the award was the way to help do that.
--

What CQ did was to add to the Young Ham of the Year awards chest something very special. A week of fun and excitement at Spacecamp. Today, with corporate sponsorship from Vertex-Standard USA and CQ Magazine, and support from countless others including the ARRL, Dave Bell Associates and Rosewood Communications the Young Ham of the Year Award continues to honor the Amateur Radio related achievements of those hams age 18 or younger. And now its time to find a fitting recipient for 2002.

Full details, rules and a nominating form are available right now on our website at www.arnewsline.org. Just scroll down to the Young Ham of the Year Award area and click to download. Or you can send a self addressed stamped envelope to the 2002 Newsline Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350 and we will mail back the materials.

The Amateur Radio Newsline Young Ham of the Year Award is a one of a kind. It honors the youth of ham radio and in doing so, we hope it helps to insure a bright future for the hobby and the radio service that all of us love. (ARNewsline™)

The main frequencies for this operation are 21.020 for CW and 21.295 for SSB twenty-four hours a day. Note, please, that the expedition will have both fifteen meter frequencies QRV at the same time.

Other frequencies are

14.195 for SSB and 14.020 for CW,

28.495 for SSB

If conditions on the higher bands are poor, they will use 7045 for SSB and 7005 for CW.

The operators will not be QRV on 75/80/160 and on WARC until the last part of the operation. A frequency for CW on WARC will be announced later.

The starting date will be released when I have their estimated time of arrival. The call will not be released until the last minute.

In Germany, for instance, an airmail letter or an IRC costs 1.53 Euro
which is more than a dollar. The latter is just sufficient for a surface
letter or a post card (1.02 Euro). Also postage in Northern Europe tends
to be on the expensive side.

For some basic postage rates see http://www.atms.ch/rates/default.htm
A currency converter can be found at http://www.xe.com/ucc/

One word of warning: US dollars do not work universally. In fact, there are some countries in which it is illegal for citizens to possess US currency - so an IRC is your best bet in those countries.

Regarding IRCs and German postage: an IRC in the US now costs $1.85US, which is a little over 2 Euros. If a German goes to the German post, can they exchange an IRC for an equivalent amount of postage? This means an IRC should be enough for airmail back to the US. Is that not true?

Walt, have you bought IRC's in, say, the last 4-5 months? Before that time, we used to pay US$1.05 for an IRC. It's my understanding that the International Postal Union agreed on a new rate for IRCs, which caused the new price in the US ($1.75 actually, if I recall correctly). Perhaps you've seen only an older price.

Thanks for that correction, Bob, and I apologize for the typo. The last batch of IRC's I bought were $1.75 each (not $1.85). I bought 100 of them, so I walked out of the US PO $175.00 poorer.

Perhaps I should send Walt a check and have him buy some for me!!

Gee, at 0.60

Hi Andrew, KG4JBM ..

will try to find some answers to your questions and give
you some hints and tips about QSL-ing via direct. Please
have in your mind, that the language English is not my
mother tounge. ~:)

You wrote (> ..):
> Right up front: I don'terrally want to use the Buro. I'm
> content to go direct. No offense to ARRL, just rather not and
> seems a lot quicker. Yes, more ducats, but I''m not after 350+
> entities (yet) so that's OK.

Not using the bureau is not a good idea! You will be surprised,
how many DX-cards from native HAM's and from DX-peditions you
will receive via the bureau. All what you need, is some patience.
Please have in your mind: The DXCC is a "loooong drink". :-)

The best method is a two way strategy: BUREAU *and* DIRECT.

> Problem is, I notice many DX say something like,
> " Don't worry - OK in Buro." and then move on before I
> can suggest I don't mind direct. So I guess what I'm looking
> for is advice on going direct. And will they get pissed off when
> a direct shows up -- even with the greenstamps, etc. ?

After each contest I am receiving a few requests via direct from
HAM's in the USA. Approx. 80% don't provide no or not enough
postage. For some years now I am going to Dayton each year and
take this "No-/Low-postage"-requests with me, to send my responses
in the States. I prefer our bureau, because it works, it is cheap
and easy to use.

> Also, ALWAYS use 2 greenstamps? Even in Euro.?
> Last I heard mail was pretty good in most of europe. It's got to be
> better than Chad or such ! How likely is it that the DX will not reply
> just 'cause he/she gets an IRC instead of 2.00US ??

If one or two US-Dollars are needed, if one IRC is OK or not ..,
that's a long story and would fill many pages here .. :-)
Please check the Web Site of my friend Bill, W9OL
http://www.qsl.net/w9ol/ He is providing a lot of good informations
about this issue!

To my personal experience: If you are sending via direct, then
very often it is a good idea to send via registered mail.
It's more expencive than standard airmail, but in the long therm

is registered mail cheaper! You should go via registered mail
to allmost all countries in South- and Central America, allmost
all countries in Africa, allmost all countries in Asia, all
countries in the former USSR and some countries in eastern and
south-eastern Europe.

Good luck with QSL-ing!

Source record: 14139

Hi Andrew all about QSLing at URL:
http://ac6v.com/callbooks.htm

For Green Stamps and IRC's required -- see URL:
http://ac6v.com/irc.htm

I categorize DX into rare, medium rare, and well done DX -- just a rough guide

For rare DX -- I send direct with return postage. For some countries registered mail is advisable, you can guess which ones. Or send both direct and via the burro. Note that some countries do not allow Green Stamps - again you can guess which ones. Many rare & medium rare DX QSL's are via a manager. Use PathFinder for QSL routes --- URL:
http://www.qsl.net/pathfinder/WebClient/
Several other QSL Route Finders at URL:
http://ac6v.com/callbooks.htm

For medium rare DX -- same as rare DX.
Rare & medium rare DX = countries with less than 1000 hams population.
See the top most wanted countries at URL:
http://ac6v.com/zones5.htm#MW

For well done DX -- via the burro -- just work several of them, after a year or so -- some will come back has been my experience. Well done DX = countries with ham populations over 1000. With QSL costs running at 2 to 3 dollars a pop -- you can spend nearly $1000 to get to honor roll -- use the ARRL bureau and be patient.

See Ham populations of the world at URL:
http://www.buck.com/divisions_by_location.html

Just my 2 IRC's worth, your mileage (and returns may vary)

Wow!

What an incredible amount of information and all of it helpful.
At first a I got a couple of replies via e-mail, then a flood of replies
to the newsgroup several days later.
[E-mail = Direct ? Newsgroup = Buro ? Big Hi, Hi.]

I really appreciate that no one gave me lectures, just practical advise.
This makes using your advise as you intended much easier for me.
The consensus seems to be : Be Patient, use the Buro, but if the DX
is Rare a little insurance by way of Direct via registered mail can be a
good thing.

AC6V offered a definition of Rare DX that raises a follow-up question
regarding DXpeditions like Ducie Is. I know the proper course is always
to follow the team's instructions -- But do they (various DXpeditions)
usually go via the Buro or Direct ?? I had thought a lot of them wanted
Direct and wanted to sell T-shirts,etc. at the same time to defray costs.
Not being cynical about that, but what's typical for a DXpedition ??

From: AC6V <ac6v@amsat.org>
Message-ID: <3C8E2267.2D0B7560@amsat.org>
Source record: 14142

Most DXpeditions are QSLed Direct via a manager or a member of the DXpedition team.
Some managers (team members) will respond to QSL's for a DXpedition via the buro, but not all. Ya takes your chances on this one.

Kinda depends whether it is an all time new one (like Ducie Island) or a band country if you go direct or via burro. I certainly would send direct for Ducie. Keep in mind that some DXCC entities may not be visited for years, Example, Desecheo KP5 hasn't been on for a long time -- so best QSL em direct if you are lucky or skillful enough to work em..

Some DXpeditions have spent $xxx,xxx to get there and back -- so I always give a little extra to help defray their costs. Most DXers I know -- do.

Likewise I always tip the QSL manager -- they receive a lot of mail with insufficient or no postage. The tips help with these and the printing costs. Most of the managers are doing this as a service to Ham radio with no pecuniary interest.

Check out:

http://www.papays.com/opdx553.html

The VP6/D team was supposed to leave French Polynesia today,
March 12, heading to Pitcairn. They are supposed to pick up
supplies and operators, then head to Ducie Island. The trip
from Pitcairn to Ducie is supposed to be two days. Activity
is expected by the weekend.

Also, check out:

http://www.qsl.net/wd4ngb/ducie.htm

Don't under estimate a wire antenna - I have 305 DXCC countries on a
W9INN dipole....

Now here is some late-breaking Ducie Is info....

Get 2 weeks free of the Daily DX email newsletter at:
www.dailydx.com

< snippet (in part) from The Daily DX 12-Mar-2002 >

Japanese Ducie Island Pilot Yoshi, JE2EHP, confirms Kan, JA1BK, and
Jin, JF1IST, flew out of Narita Airport in Japan. There heading for
Gambier, where they will meet some of the other team members and board
the Braveheart, which is their awaiting departure for Pitcairn. The
first leg of the trip is expected to start some time today. Last
November the trip took about 24 hours to go from Gambier to Pitcairn.
Aboard the ship the Team will set up 15 and 20 meter dipole antennas
so they can operate as /MM starting March 13 or 14.

VY0 is the prefix for the Canadian territory of Nunavit, in the North
West Territories. Without the remainder of the callsign, it's hard to
advise you further. There are several active VY0 stations around.

Rodger, rodger on that. I lived thru weeks of jamming on 80M for my
WAS 80M. If you can modify a carrier for phone and hear only phone
at rx, you would think you could invent a way to kill ANY CW only rx.
as long as you're on SSB working phone only - Hence filtering most
jammers before you could even be bothered.

Source record: 14054

Hi Jim -- If you are ever in doubt about prefixes --- see URL:
http://ac6v.com/prefixes.htm

VY0 is Nunavut -- New Canadian Territory as of April, 1999,
composed of land that had formed the eastern part of the
Northwest Territories (VE8). Most of Nunavut is in CQ
Zone 2, as are all but three of Nunavut's 20-odd
Amateurs. The westernmost part of Nunavut lies in Zone
1. Akimiski Island and other islands in James Bay are part
of Nunavut, but are in Zone 4. Note that all the islands in
Hudson, James and Ungava Bays are part of Nunavut,
no matter how close they are to the shorelines of
Manitoba, Ontario or Quebec. ITU Zones are 2, 3, 4 and 75.

For DXCC -- counts as VE Canada, however if it was Zone 2, this is one of the
more difficult zones to get.
A Nunavut Map -at URL:
http://parkscanada.pch.gc.ca/parks/Nunavut/common/map_ter_his_pks_e.html

To help with who you worked;
Go to URL:
http://oh2aq.kolumbus.com/dxs/oldlook.html?
Select The Spot Database Search.
Type in VY0
Get results and see if any of these ring a bell (QSO)

Excellent! I was going to put up a posting asking for people to report their successes with wire ant's. I'm only up to about 100 confirmed on my dipole (worked probably 150 so far; awaiting lots of QSLs). Been completely frustrated by pileups for 3B, 5R, 9L etc in recent weeks, so I definitely incur a penalty for having a wire antenna. Still, I manage to get lucky often enough.

Sometimes I stumble on good DX while cruising the bands, sometimes I figure out where to find a gap and stick my call in it, and sometimes I just happen to have a better pipeline than others do.

Insomnia is good for wire-antenna DXing. About 4 AM this morning I got ZK1 just before he appeared in the packet cluster.

Anyone know if any Honor Rollers used wire antennas?

73 de Bob, KI8AB

(Back on CW after much time away, and hoping the DXing will be better there.)

I can't give you any expertise on DX'ing as I'm a newbie to it.
But I can tell you that lack of greenstamps has always made
sure I get the most out of wires -- that's all I've got.<wink>

However, one thing I could add is that I also have a homebrewed
vert. wire. I can give you lots of fancy decriptions, but it's really
just 75+ feet of 14AWG insulated stranded from Home Depot that
hangs down. I keep it grounded with every piece of scrap wire I
had hanging around when I put it up, 10ft to 100ft.+ Anyway, the
point is that I can easily switch between the dipole and the vert.
According to my MFJ 259B the vert. seems to run the SWR a little
lower. But I use each as needed and have often been able to pull
one out one way better than the other. It's nice to be able to check
the other ant. "just to see". This has worked best in iffy propagation
conditions when the band (whichever one) gets into that quavering
kind of flux where signals come and go or conditions will suddenly
degrade strongly and limp back. If you have room for a dipole, you
might try a simple wire vert. as well. Then tune across the bands
and check the two.

Just my 2 cents worth,

Andrew

Bob....you are giving me an excellent opportunity to brag!!!!

All of my HF QSO's have been with home-brew wire antennas. Quads, deltas, dipoles, half-squares.......all made with wire. I don't have any exotic tall towers or masts, either. All my wire antenna supports are home-brew also. My highest wire is 43 feet at the apex.....a sort of drooping dipole cut for 80 meters, fed with coax, but used with a tuner on other bands once in a while.

All my Q's were on SSB.......all were exciter power...maybe 100 watts out on a REAL good day. Most but not all the contacts were made as a General class license holder, tho a few have been made as an Advanced.

I have worked 333 DXCC countries, and I have happily confirmed all 333 of them. I am looking forward to the Ducie operation......tho right at this instant 2 of my 4 wire antennas are out of commission...........

The radio I have used for all this fun has been a Kenwood TS-180S.....an often overlooked Kenwood, with a really good sharp reciever. I also use the Heil HC-4 mike element.

Tnx Bob....and good DX to you.... 73... Lee Carkenord KA0FPJ

Hello Lee,
FB on the 333 confirmed..that is really outstanding.

While a quad is a "wire antenna" it is also a high-performance directional "beam antenna". When most folks hear the term "wire antenna" I would bet 99% of them think "dipole" or 'long wire'....

I also only work SSB and use a W9INN 5-band dipole at about 54 ft along with a homebrew 17m inverted V all on the same rg8-x Radio Shack feedline!

My battle cry is "Honor Roll on a Dipole" !! Currently at DXCC = 305...

Wow!! Congrats, and thanks for the encouraging stories of your own success.
Now I know there's hope for me, with an ancient TS-520, a 130-ft dipole,
and an abiding fear of CW DXing.

As Charles suggested, I wasn't really thinking of a quad when I spoke of
wire antennas. My main limitations include a wife who simply doesn't
appreciate the look of tall towers and aluminum monstrosities. I'm afraid
a quad or a delta would be just as offensive to her eyes. Unless I can
think of a way to collapse it out of sight when I'm not operating. Hrmmmm.

73, Lee, and thanks for bragging. I needed the encouragement.

Hello Bob,
I have been working on my DXCC count (dipoles only) only since
14-Aug-95. I think what really must help my modest station is my 5412ft
elevation here in Prescott,AZ. At that rate I guess the average is
one "new one" per week over the past 6+ years...
BTW San Felix XR0X should be qrv by this coming Sunday and it looks
like Ducie Is will be on about that time as well....I need both of
those....73 / DX

Hello Presley,
That is some sad news. You know it dawned on me...it is feasible this guy has sold the same non-working rig over-and-over again, Each time promising to refund $$$ only - after - the radio is returned. I am not saying I know this to be so..but it is within the bounds of logical speculation.

Who knows..you may have well been the 15th or 16th "lucky buyer" in-a-row to receive this junk...

Let's see assuming $185 for each "lucky buyer" ....this guy has made $2,960.00 based on the projected 16 sales of the same single radio !!!

Oh....there is still hope........heh, heh.......lottsa hope!!! I worked plenty of interesting DX with wire dipoles, inverted V's.....simple but effective antennas. And some of those wires were VERY temporary, too. I go camping a lot, and use a slingshot to help erect wire antennas suspended from trees....Field Day style. To me....just about the ultimate DX contact is made from a camp way off in the Colorado Rockies......using a wire in a tree, and battery power. I REALLY like to chase DX that way, and have done a lot of it.

Ten meters is still pretty good........and I have a 2 element 10M quad I made from PVC tubing and wire. I dont have it permanently mounted.....its stashed way back in the corner of my back yard....on the ground......just waiting for the next exciting DX-pedition. When the new country comes on...I wait til the pile-up is whittled down a bit, then I put that quad up.........as best I can.......and try to work em. I have had good luck like that, with the quad boom only 13-14 feet above the ground. This on 10 meters....... When I am done trying for the DX...the quad comes back down....and gets stashed again.

Keep poking around..getting ideas and input from others.....I think you'll see that its possible to work a LOT of really good DX...with limited capabilities. There are a lot of people out there with good success stories.....and it's always fun to hear those stories.

You have a good attitude.......so I think you're gonna work a lot of good DX.........and soon you will be bragging too......both about the new country you just snagged....and also about your latest killer home-brew wire antenna!!!

Hello Lee,
Great post.....never underestimate the - performance - of a wire antenna (dipole, etc)
My Elmer - W7NH - Art (sk) told me one day while we were up on the roof trimming my homebrew 17m inverted V

"Charles..you'll do just fine with a wire dipole..believe me!" btw..

Art lived-and-breathed 10m-11m from way back when 11m was still a Ham Band and doing 10m / AM mobile DX. I loved to look at his 11m Ham Radio qsl cards!!

Well Art, you were right on the money. Art showed me what true Ham Spirit can be like. Whereas I am unable to fish rg-8x through the attic Art (at 70 yrs young) climbed right up in there not on one occasion but two different times to run coax for me.

If there was roof-work to be done at AB7SL I could not keep that guy off the ladder! He loved to help...always saying it was a 'labor of love' to help a fellow Ham....

I have an Elmer Tribute Page dedicated to this fine Ham on my website. The W7NH callsign now lives on through one of his son's. Art loved to "play Ham Radio" while on trips in his motor home.
He and his xyl were gone out-of-state so often we joked his 'NH' suffix actually meant "Never Home!"

I've been licensed for HF since Dec '96, but didn't take DXing very seriously until pretty much the last few months. About half of my ~120 cards have come from scanning through my old logs and requesting cards on old contacts. Maybe in 5 years I'll be nudging up against the Honor Roll boundary too.

Good luck on getting those two new ones. I sure hope Ducie stays QRV long enough to calm down the pile-ups some.

Sometimes I'm very lucky, yet not lucky enough. Last night, I was sitting on 14205 when a station booomed out an "is the frequency in use?" request, then started calling out CQ A71MA. I must've been the first person to call when he unkeyed, but another station got him. THEN the real pile-up started in earnest, and I was out of luck for the day. Maybe tonight.

No kidding! It's been pretty amazing lately, and just when I thought the cycle had left us high and dry. Last year there was some fine DXing, but it wasn't until this secondary peak that I first worked a B or a VU, or dozens of other Oceana and Far East/MidEast stations.

That is an EXCELLENT idea. I'll have to see if there's a way to suspend a quad from a tall backyard tree and to control its rotation.

I'm picking up this post a little late in the thread but for what it is worth I'll add my two cents worth.

I've been back on the air since 1975 using nothing more than a 100 watt barefoot transceiver and a random length wire antenna with a heathkit tuner. My count stands at 244 worked and 235 confirmed on CW only. No contest QSOs are included in that total. I have never worked a list. The total includes 59 entities on 80 meters and well over 100 each on 40 through 10.

I have 73 worked on SSB but I don't make much of an effort at trying to work DX on SSB. I also have 79 on RTTY and 86 on PSK and am working at the count in those modes pretty regularly now.

The short answer to the question of can I work DX with low power and a wire antenna is YES if you are willing to make the effort to do it without a microphone.

I'm working on that.

My CW speed is about 20 wpm under ideal conditions, and in more "real" situations, I'm good for about 18 wpm. DX pileups are *unbelievable*. I have a hard time finding the DX signal in the mess, a harder time catching the callsign since they're usually at 30+ wpm. In my experience, DXers do NOT slow down for slow coders. If he says 'up 2', I'm very lucky to catch it in the middle of a stream of characters. That by itself toasts my chances, of course. I think I catch my own callsign (but then I would never know if I missed it, would I?) but then I miss just about everything on the "exchange" except RST. Name? QSL route? QTH? Not bloody likely. It's incredibly frustrating.

Yes, I'm working on it. Experience is the only thing that will help, obviously. I really have no interest in ragchewing, so it's gotta be DX. If I only have a half hour to sit at the radio, though, I assure you I can get in a LOT more DXing in on phone. My blood pressure stays a lot lower on phone, too.

Interesting topic. I have worked and confirmed 333 countries using only homebrew wire antennas. And all have been with 100 watts.And on SSB. The antennas have been dipoles, multi band dipoles, quad, delta loop and 2 element delta loop, and inverted L, and now a 20 meter extended double zepp.
And yes this has been through several cycles, begining in 1980. Whats the fun in working honor roll in 5 months.
Timing is important in the pileups, knowing just when to yell (and when not to). And patience. Also it can be suprising the number of new and semi rare ones can be worked in big contests, especially on 10m.
Not to start an argument, I dont shy away from nets or lists either. If there is a new one for me somewhere on the bands I go and try to work them.

Is there a CW newsgroup and if so how do I get to it? I did a Google search, but came up with nothing.

Thanks

Henry WA0GOZ

Hello DXer,
While I am not a regular at all on ay of the DX nets if there is a new one I need and it is spotted on a DX net then I am going to be in there giving them my Lass Too to get on the list and log that new country.....but really that is the only time I get on a DX net. As well I can probably count all the occurrences of that on one hand.

1006. Assorted Queries (DXCC, DX'ing, QSL'ing)

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-16 19:43:08 UTC
From: Cathexis@yourhaterols.com
Message-ID: <3c939cfd.1022669722@news.erols.com>
Source record: 14082

Greetings,

First thx. for previous replies to other questions recently. I'm just starting now to chase DXCC.

Flipping thru my DXCC list via Rod to ARRL and noticed KH6,7 and KL7 on the list. These are Entities ? If so, good, that's 2 more I've got.

Regarding QSL Direct vs. Buro question I'd made a few days ago; The other nite I worked UK9AA, Fedor. Nice guy. I had to wait 45min thru the QRO pile-up for my turn on a IC-756 barefoot on a wire. But I got through. (Comment: I'm *not* anti-big gun.) Now to QSL. Fedor's instructions were "via QRZ.com". I take this as a Direct ?
And who here has been confirmed from Fedor? Grenstamps or IRCs ?
Registered Mail? Helpful advise, experience with him appreciated.

Regarding DX : The books say 30M and down do best with Grey-line. Any experience with it on 15M in your practice, gossip, etc.?

Again, thank you,

Andrew / KG4JBM

Either KH6, KH7, AH6, AH7, NH6, NH7, WH6, WH7 count as one DXCC entity - Hawaii
KH7K is Kure Island -- this counts as a DXCC entity

For Alaska the prefixes could be AL7, KL7, NL7, WL7 all are the same entity --
Alaska

He meant for his direct QSL address -- go to this URL: http://www.qrz.com/
Type in UK9AA -- Get
UK9AA
FEDOR PETROV
BOX 58
TASHKENT, 700000
UZBEKISTAN
But you can go via the burro -- takes longer. But Uzbekistan is pretty rare -- so
I would go direct -- but your call.
At QRZ.com, Fedor has an e-mail address -- just ask em - IRC's Green, registered
etc.

> And who here has been confirmed from Fedor? Grenstamps or IRCs ?
> Registered Mail? Helpful advise, experience with him appreciated.
>

From my book DX101X regarding 30 Meters
30 meters. An Amateur band since the 80ï¿½s, this band has propagation
characteristics of both the daytime and nighttime bands. Since D-layer absorption
is not significant, communications up to 1900 miles are typical during the
daytime, and halfway around the world via the darkness paths. It is usually open
via F2 on a 24-hour basis, depending on the MUF. The 30-meter band shows the
least propagation variations over the 11-year solar cycle.

Power output on the 30-meter band is limited to a maximum power of 200 Watts PEP, CW, RTTY/Data and Amateurs must avoid interference to the fixed service outside the US. This is a great band to work DX, as many ops do not work CW and the power limits are an equalizer. No big guns or contests here

40M, 80M and 160M are indeed primarily night bands for DX.For Gray line DXing (low band DXing) -- you need to read the definitive source --- Low Bands DXing by ON4UN.

Rod, perhaps I didn't make myself clear. It's * 15Meter * prop. I was
interested. The reference to 30M is just that most books say Grey-line
assist is more confined to 30M and down. I was wondering what if anything
it had to do with helping things on 15M.

Still, very helpful as always and Thx. you very much.

This week marks 3 years on HF for me with a variety of homebrew and commercial wire dipoles plus a Solarcon A99 vertical. The first three months were with converted CB SSB rigs on 10 meters. Only 10 or so contacts were made using over 100 watts. I have 95 DX entities and 47 states so far, with a couple of 2-3 month periods QRT, no HF on vacations, several other time-consuming hobbies, and working almost 24/7. It is definitely within reach!

Oh yeah...you're gonna make it. My DX mentor (N6KZ) gave me some good advice on submitting for DXCC. He told me to be sure to have at least 105 confirmed and triple-checked (by me) cards so in case one or two or even three got rejected I would still get my DXCC wallpaper..

Well I sent in 104 cards (couldn't wait!) and sure enough my lone Ireland card was never filled out by the DX with any date! I know I checked this card..but obviously it slipped by. Fortunately it was the only rejection and I still had 4 other cards and with one of them as the Ireland replacement I got the award okee dokee...

Good luck..and FB on the progress so far....

Hello;

Don't start to hard. 1kW isn't the must for dx. Many HAM's use it but in a pile up it make any since.
For example : i worked my firsth 275 DXCC with 100Watt and dipoles and verticals. Now i have a
Triband 3el Yagi for 10/15/20 dipole for 12/17m and vertical for 30/40m.
Still i don't have a linair amplifier.
My score is now 303 so.... (299 in CW)
All u need is patient. Listen, listen and listen.
Read DX-news as u have ARRL dx news. And look to www.NG3K.com and www.425dxn.org
Hope that's helping you. Have fun and Good DX!

1021. FA: McKay Dymek AM7 TUNER - AM / Long Wave Tuner

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-18 01:40:59 UTC
From: Daniel Simpson <dzan@qwest.net>
Message-ID: <1703200219405996 61%dzan@qwest.net>
Source record: 14097

FA: McKay Dymek AM7 TUNER - AM / Long Wave Tuner.

A AM7 tuner is basically a AM5 with the addition of the Long Wave Band. Used in Europe. That you can receive along the east and west coast of the US. (See Information Below)

Long Wave Information:
"155 to 281 kHz: This is another AM broadcasting band in Europe and parts of Asia. In Europe, there are numerous high powered (1,000,000 watts or more) stations here. These stations are capable of covering an entire European nation like France or Germany with reliable signals around the clock. Although ionospheric propagation is not good at these frequencies, the high powers used means that many of these broadcasters can be heard along the Atlantic seaboard during the fall and winter. Best reception is usually from local sunset to about 0600 UTC. A few long Wave stations in Asiatic Russia can be heard on the Pacific Coast beginning an hour or so before local sunrise."

A Detroit Michigan user said:
"I have an AM-7 and a DA-7. They make a nice pair together. Unfortunately, there's not too much long Wave possible except on a few winter nights when I can pick up some of the powerhouses from Europe on the AM-7. I have heard Morocco, France, and BBC on longwave here in Detroit. In fact, this winter, I got them pretty regularly"

SPECIFICATIONS:
* Two Band High Fidelity Solid State Tuner
* Frequency Range: 540-1605 kHz. Standard AM broadcast band,150-300 kHz Long Wave
* Sensitivity: 6.0 ,uV for 10 dB signal to noise ratio on Long Wave Band. 3.0 uV for 10 dB signal to noise ratio on Standard AM broadcast band.
* AGC Characteristic: Less than 6 dB output variation for an input level change of 10,uV to 10 mV.
* Bandwidth: -3 dB RF Narrow - 6 kHz; Wide - 15 kHz
* I.F. Rejection: 45 dB
* Audio Frequency Response: -3 dB @ 15 Hz, 7500 Hz
* Audio Whistle Filter: 9 kHz
* Distortion: 1 kHz @ 30% modulation: 0.5% 1 kHz @ 50% modulation - 1.0%, 1 kHz @ 80% modulation - 1.5% (1 mv @ 1 MHz input, wide & distant mode).
* Audio Output: Standard: 1V RMS- 5K output.
* Shipping weight: 12 lbs. (5.5 Kg.)
* Dimensions: 17-1/2" x 10" x 3-1/2" (43cm x 25cm x 9cm)

Features

The McKay Dymek AM 7 TUNER is an all solid state high fidelity AM/Long Wave tuner combining extremely low distortion with excellent sensitivity, selectivity, and a wide audio range. The AM 7 is compatible with professional studio equipment as well as high fidelity "home" sound systems. The low profile black and teak cabinetry makes the AM 7 an attractive addition to any system or decor.

Broadcasters all over the country report excellent results using Dymek Equipment as low cost monitors. As one station executive wrote, after using the Dymek as the standard, "our signal was as close to 'FM on the AM band' as we could get".

reception from local or distant stations is assured by a choice of narrow or wide bandwidth selections at the front panel. To prevent an overload of the "frontend" that may be caused by strong local stations, an attenuator in the antenna circuit has been included. An illuminated, easy-to-read tuning meter aids in ease of tuning and is standard equipment on all Dymek tuners.

Remarkable selectivity is achieved with two eleven element ceramic filters. A whistle filter eliminates most bothersome noise common to AM listening. Distortion is low and sensitivity helps pull in those distant stations; lets you take advantage of AM's natural long range capabilities - hear stations which were previously unlistenable. Wide and narrow bandwidth selectors assure optimum local and distant reception. Illuminated tuning meter.

The Dymek outreach for perfection in AM reception has produced the Am 7. Unlike conventional AM tuners, the AM 7 allows full and accurate reproduction of transmitted program material. For the first time, AM reception is not limited by the receiving equipment The complete transmitted fidelity may now be fully enjoyed and appreciated.

McKay Dymek is the leading producer of AM high fidelity receiving equipment. Authoritative hi fi magazines agree that the quality of AM reception provided by Dymek equipment is truly excellent. This fact is further established by the acceptance of our products by scores of AM broadcasting stations throughout the United States. Many stations use more than one Dymek tuner to monitor and insure their transmitted quality.

For many years very high quality AM transmitters have been operating, but due to the mediocre performance of available AM receiving equipment, most high fidelity experts believed AM reception to be of inherently poor quality.

It is truly a difficult challenge to design and manufacture a tuner capable of high quality AM reception. McKay Dymek engineers accepted this challenge and, after expending great effort, have succeeded in the design of the AM 7.

The McKay Dymek AM 7 tuner is a precision, solid state AM instrument of the highest quality.

Innovations have been engineered to provide:

Very low distortion even at high modulation levels using a unique hot carrier biased diode detector.

Extremely wide frequency response through the use of expensive ceramic filters.

High sensitivity for reception of weak, distant stations.

Once you have listened to AM radio on the AM 7, surely you will agree with our many satisfied customers: the AM 7 is a truly superior addition to any high fidelity system.

RIF SECTION Dual antenna connectors are provided on the rear panel. An RCA type connector is provided for coaxial cable antenna systems. There is also a set of terminals for direct connection to a longwire antenna and external grounding.

A Dymek AM 7 tuner represents the very best in AM/Long Wave listening. Try it!

Note:This unit needs an external antenna to work I used a terk AM antenna with this unit and it worked well. I am also putting this antenna up for sale. Check for it on ebay. and will need a Long Wave Antenna to receive Long Wave. Like a Mckay Dymek DA7 Antenna or a QUANTUM QX PRO LOOP.

This unit has some minor scratches on the top also a scratch on dial under czech USSR (could be fixed with black paint or marker from the inside) and missing ground plug (see pictures). Otherwise it is in Great Shape!

I accept Paypal, Billpoint & Money Orders. $12.00 for shipping-Continental US only. Insurance optional at buyers expense. Winner to pay within 7 Days of auction close. Email me with questions.

Thank You and Good Luck!!

1022. FA: Terk Advantage AM Antenna

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-18 02:01:52 UTC
From: Daniel Simpson <dzan@qwest.net>
Message-ID: <170320022001526451%dzan@qwest.net>
Source record: 14098
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

FA: Terk Advantage AM Antenna

Finally an AM antenna that is truly beautiful!

When appearance is an issue you finally have a great choice! It has most of the power of a Select-A-Tenna plus it is a handsome addition to any decor. It comes with wires like the Select-A-Tenna Hardwire model for direct connection to your stereo or can be used like the regular model Select-A-Tenna. It certainly blows away any of the smaller antennas supplied with a stereo. Size: 9.5ï¿½ high.

The Terk AM Advantage AM antenna dramatically improves the AM reception from any receiver, tuner or portable radio. Its unique passive wireless technology eliminates the need for connectors, batteries and power cords ï¿½ simply place the AM Advantage near the receiver or radio.

The AM Advantage combines wireless convenience with advanced tuning technologies such as Terk's exclusive Pin-Dot Pre-Tuningï¿½ that zeroes in on even hard-to-get stations by tuning the antenna to the station's frequency.

Features:

* Pin-Dot Pre-Tuning dial adjusts antenna to a specific frequency for best reception of individual stations
* Compact design allows easy placement
* Non-skid base keeps antenna in place during adjustment
* Reception pattern: Omindirectional
* Dimensions: 9.5"H x 9.5" W x 2.5"D
* Wire For Direct connection

AM Advantage Q&A
Does this antenna need power for it to work? Also, how can I connect it to my radio?
The AM Advantage is designed for "wireless operation"--that is, it does not need AC or battery power and will actually provide signal to your radio or receiver without having to be connected with wires. However, if your radio or receiver has connections for an external AM antenna, we supply a wire with the AM Advantage to connect the antenna to the input, should you choose to do so. The solid black wire connects to the terminal on the radio or receiver labled "AM in," while the wire with the white stripe on it connects to the terminal labeled "ground."

Can I extend the wire on my AM Advantage to place it on a windowsill or somewhere away from my receiver?

You can extend the wire with by splicing it with insulated doorbell wire, which is available at any do-it-yourself electronics or hardware store. However, we do not suggest doing this, because the length of the wire is calibrated to correspond with the tuning dial on the AM Advantage. When you extend the wire on the AM Advantage, you also change the resistance of the antenna, which will cause the station indications on the dial to be inorrect.

Why does my antenna work better when I touch it?
When you touch the antenna with your feet on the ground, your body is actually acting as a giant antenna and affecting your AM Advantage's reception. You have to let go of the antenna and move away from it to determine its reception performance.

Can I make the wires on my antenna longer?
No. When you make an AM antenna lead longer, you make it more susceptible to interference. The longer the lead, the more interference you are likely to hear. Also, lengthening the cable will change the impedance of the antenna and degrade reception performance.

Why does the antenna work better when my radio and antenna are next to a window?
Many building materials can affect AM and FM signal reception. Metal, brick and stone between the radio station and the antenna will decrease the strength of the signal. to the antenna. However, glass does not block radio signals, and locating your antenna next to a window allows the antenna to receive a cleaner, stronger signal.

This unit is in good to great shape. It shows some scuffs in the rubber base. and that is all.

I accept Paypal, Billpoint & Money Orders. $9.00 for shipping-Continental US only. Insurance optional at buyers expense. Winner to pay within 7 Days of auctions close. Email me with questions.

Thank You and Good Luck!!

Been seeing lots of negative comments about this operation on the oh2aq
spots from folks using anon names calls etc.
If you guys are such good red hot operators,why are you at home and not
there?
Outside of K5VT and JA1BK,the bulk of the operators are local Pitcairner's
who never did this before.
Instead of badmouthing em give some help.They could have stayed home.

Probably because there's a bunch of lids here in the States who never shut up.

(I tried for about 10 minutes to work them on 15 CW last night. Never could figure out where they were listening - because at least half the pileup never stopped transmitting. This is, of course, an ongoing problem - and it has resulted in me pretty much giving up on working DXpeditions.)

ROTFL! It's *always* like that in Europe, Doug .... with the added
problem of "policemen" constantly sending remarks on the DX station's
frequency.

10 minutes? That's nothing. I have often persisted for 3 or 4 hours
when trying to work Pacific DX-peditions. I usually make it in the
end, but never did manage the VP8's last month ... nor ZL8RI :-(

On the other hand, 5A, 3V8, YI, YK and YA are easy-peasy from here.
:-) I even worked YK1AM on PSK31 recently.

1033. Why is VP6/D an Entitiy ?? (Semi-Serious Rant, longish)

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-18 15:55:08 UTC
From: Cathexis@yourhaterols.com
Message-ID: <3c95fc67.57487878@news.erols.com>
Source record: 14009

Hello Again,

Now I'm not being naive, I know that everybody wants, " to work a new one ", but I don't really see why Ducie Is. ought to be an Entitiy at all. It clearly belongs to the Pitcairn Group which is already VP6. Okay, it's a two day voyage via tramp steamer, so what ? Unlike the Spratly Is. which is an Entity, there is no geo-political dispute that might accord it some measure of uniqueness. Nor, unlike the many newer Entities that have arisen from the ashes of Yugoslavia, can it be said to be a racially or historically distinct population deserving of seperate recognition. From what I can see, Ducie Is. is unihabited inbetween DXpeditions. I'm OK with un-inhabited Entities, just don't see what there is about Ducie to argue its status as a new one.

So what really qualifies VP6/D as an entitiy ? Well, it's small.
And maybe no one's ever worked it, I'm not sure . And of course it's remote from those countires that have large Ham populations. So ? It's still well under 8000Km from my QTH near Wash.,D.C.

I don't claim to have the entire DXCC List memorized (though some of you may, Hi,Hi.) But maybe two serious and one semi-serious example could be offered here for your entertainment./ consideration.

How about making the Lakota Nation an Entity ?
(For non-NAer's, The Lakota Nation is the largest, best organized, most distinct population of Souix Indians in NA). They have a semi- "nation" status. Certainly more than Ducie Is. They're as remote from the US as Slovenia from Croatia. They have a truely racially and historically and culturally distinct population.

Those of you who are history buufs may also recall "Red Cloud's Treaty" of approx. 1863 which did then, and I believe still does, accord the confederation of Souix Nations completely soverignty over what is now most of No. and So. Dakota and parts of Montana. Surely, they should be an Entitiy ?

And what about the rest of OC ? Granted, there are lots of entites out there in Water World. But there's lots that aren't-- lots and lots.

And finally for my personal plea. What about the Great White North ? If I were a Cannuck I'd be mighty pissed that all these OC islands make it as Entities, some of which you can hop a flight to, but look at the Arctic Archipelago of Canada. God, it is huge !! Did you know that some of the larger islands in the Queen Eliz. Islands were the last sizable land masses discovered on earth? Numerous islands up there bigger than some countries. And talk about remote! Has anybody ever tried to propose making some of these Far North Arctic Is.. into entities ? And for that matter, any sources on DXpeditions to these areas in the past? Anyone with good sources on polar DXpeditions would enjoy hearing from you.

They should be listed alongside G and M.

> Meaning it goes from 1AO to 3A. Anyone know why no
> Entities were given the 2xxx - type designation ??

These callsigns belong to "Intermediate licences" (the former "Novice licences") in the United Kingdom, the Isle of Man, and the Channel Islands - the letter after the 2 tells where exactly, with the only difference that 2E#*** is England (English G and M calls don't get a second letter in the prefix, except on special occasions).

The holders of such calls may AFAIK use up to 50 W (it used to be 10 W until recently) - this should be enough to be heard across the big pond, so you might meet one of them sooner or later ;-)

Reticulum <Cathexis@yourhaterols.com> wrote:

> ... but I don't really see why Ducie Is. ought to be an Entitiy at all.

It has to do with its separation from the other islands in the Pitcairn Group, and with the fact that Pitcairn has now an amateur radio association which is member of the IARU. That makes it a "real radio country", and Ducie happens to be far enough away to enjoy the same status as e.g. Hawaii with respect to the USA.

> How about making the Lakota Nation an Entity ?

Wouldn't that still be part of the continental USA, although with a special administrative status?

Oceania seems to be rather well sorted in terms of "entities".

But what I don't understand, either, is that European and Asiatic Russia are considered different entities, but European and Asiatic Turkey aren't.

And on a lighter note: what about "outer space" and the Moon? ;-)

> ... Did you know that some of the larger islands in the Queen
> Eliz. Islands were the last sizable land masses discovered on earth? Numerous
> islands up there bigger than some countries. And talk about remote! ...

Remote, yes; difficult to access, of course - but too close to each other and to the North American continent. That would rule them out. But still, there are DXpeditions on polar islands, maybe you'll find some info on DL6ZFGR's site: http://www.dl6zfg.de/starteng.htm

The sorting-argument is well taken.
>
>But what I don't understand, either, is that European and Asiatic Russia
>are considered different entities, but European and Asiatic Turkey aren't.

Frankly, though I'm American, I don't but AK as really a separate entitiy.
It's not *that* far and it's enormous. Maybe the Aleutians.
>
>And on a lighter note: what about "outer space" and the Moon? ;-)

No outer space entities because then you could only work mobile, Hi,Hi.
Once a permanent Space Station is built you could still argue the Hams
were only portable from home QTH.

A Moon base is a different story. As is Mars, etc. Too bad, I doubt
it will be our lifetimes. (sigh)

Well, there was Dipolonius, the Roman senator. And there was Petroleum Blownaparte, the former King of France who had a very bad experience with a Cantenna dummy load.

Even the youngest of schoolchildren has been taught that Vikings appeared on the American continent as early as the eighth century AD, although of course AM modulation was okay back then.

And even Tennessee Williams was an amateur radio operator. His long-lost play "Morning Becomes Electric" about an all-night DXing session, is another fine example of this hobby influencing the arts.

Well, it isn't exactly ever *not* like that over here either. Dunno if you
learned it from us or we learned it from you but either way it's not much
fun!

>10 minutes? That's nothing. I have often persisted for 3 or 4 hours
>when trying to work Pacific DX-peditions. I usually make it in the
>end, but never did manage the VP8's last month ... nor ZL8RI :-(

I suppose what I'm just going to do is locate a reasonably quiet hole & just
sit there, in one spot, pressing the memory button every time the DX station
stands by for calls. And hope he happens to tune past my frequency while
I'm transmitting. Seems like a horribly inefficient system but apparently
it's what the majority wants.

Luckily I got a rather bloated envelope from the QSL bureau today so there's
plenty to do while I wait for the VP6 ops to find me<g>.

>On the other hand, 5A, 3V8, YI, YK and YA are easy-peasy from here.
>:-) I even worked YK1AM on PSK31 recently.

Nice stuff. 5A & 3V8 aren't exactly tough from here either (though 5A QSLs
are a bit of a challenge, no fault of Abubaker) but the others I could sure
use.

Ya know... Most of your confusion would go away if you only checked the ARRL site for the complete description of the DXCC program along with the thorough definitions of what constitutes a DXCC entity and what doesn't and why.

??? Please see the site. Balkans... EU...? What? An Indian reservation has no standing army, no representation in the UN or ITU, no autonomous foreign relations, no stamps or currency, etc. Why should that be a DXCC and not, for example, my toilet?

Hi Doug!

This does seem to be how they work ... and also they tune over a
ridiculously wide range on CW. I worked them on 40m CW at 0625 this
morning, 17 kHz up (!), in just 10 minutes of calling. Nobody else in
Europe could use the band between 7002 and 7020.

Good luck!

73 de G3NYY

P.S. Wkd YA5T on 24.9 MHz CW at the weekend .... and also a pirate
"YA5T" on 40 CW last week. Oh well, you win some, you lose some. :-)

Andy Griffith the actor is NOT this person. If any of the
callsign servers still gave the birth date, this would be
painfully obvious. The ages are off by at least 20 years.
The actor would had to have been 17 years old when he was
doing the Mayberry stint. He wasn't.

It's interesting to see that you do not consider it an issue already. either
we have a totally different threshold of tolerance or you have already set a
spam filter on the cluster.

There is a difference of opinion among cluster sysops about how serious this issue is. The matter has been discussed at length on the AR-Cluster reflector. It is likely that a secure signon system will be established as a sysop option. However this will do nothing to limit the problem when the offending spots and announcements come from non AR-Cluster sites, unless they also implement a satisfactory security system. If a secure network were to be established it would have to cut it's links to the non secure ones. Maybe it will come to that.

Point taken. The problem, alas, in most of the cases comes fom Italy. Still,
most cluster-admins have already established a clear policy as to how to
verify a callsign.

Probably the easiest solution would be to block *all* telnet access and only
allow ssh with host identification.

I can't think of another name at the moment, but I'm sure this sort
of mistaken identity has come up before. Someone sees a famous
name in the callbook, and assumes it's the famous person, when
in reality, it's just someone with the same name. When this
sort of thread has come up before, I'm sure there have been
debates on other names about whether the famous really were hams
or not.

It's not totally unexpected. People want the recognition of
the hobby that a famous name would seem to provide, so if
they see a famous name, then they accept it as the famous
person without any further consideration.

Ouch. But I'm *really* not so sure this should be blamed on the VP6 ops. I mean, in part, yes, they shouldn't take callers that high. But if the pileup isn't going to shut up & let them hear the station they're trying to work, I don't know they have much choice. The super CW ops like N5KO can't possibly be on *every* DXpedition!

I did work them Tuesday morning. Just as described - broke open the package of bureau QSLs, found VP6DI on 21.020, found a reasonably quiet hole, and called every time they asked for callers. About the time I finished with the EA cards, they heard me.

Then dropped down to 12m and ran across XR0X, fairly quickly worked. Finished it off with a nice ragchew with OX3FV on 17.

Any ideas? 5U9C worked in the ARRL CW, H7DX worked on 80m a week later.
Neither call shows up on an Internet search - but I'm pretty confident
(though not absolutely certain) neither call was "busted".

5U9C was part of the 5U operation that included 5U1A, 5U4R and others. I think they used different calls for different bands and/or modes. 5U9C was (I believe) only on 15m CW. I worked "1A" on 40 and 20 CW and "4R" several times on 20 SSB. (After the pressure is off, they get lonely) QSL is via I2YSB. See:

http://www.qsl.net/niger-2002/

H7DX via DL7CM.

Your point about the DXCC site at ARRL is well-taken. I will make a point
to read it thoroughly. However, last I checked, Entities like Alaska, Puerto
Rico, and Hawaii and many, many others also did not have a standing army,
representation in the UN (distinct from the USofA), autonomous foriegn
relations, or the right to issue there own postage stamps or mint coinage, etc.

BUT,....you can find in the Lakota Soiux Nation a well-defined
geo-political area of recognized uniqueness (a federal reservation) that
exists percisely because its principle inhabitants have a clearly defined
racial, cultural, historical and geographical identity quite different from
what surrounds them. A close reading of Red Cloud's Treaty would make
it obvious that, by modern standards, the indians were being granted the

status of a virtual Republic. The fact that the US abbrogated the treaty
is not the fault of the indians.

You needn't get upset or throw insults about your household
appliances, Zoran. The A.R.R.L. isn't going to change the rules on my
account. And you can be sure that as I chase my DXCC that if VP6DI is
one of the hundred I'll be sure to claim it. That's the game. But I think it
helps to keep perspective and remember it is game. Hams should be
proud to be anti-colonialists and anit-imperialists. ' Cause if the whole
world was the British Empire, the French Empire, the Spanish Empire,
the Dutch Empire, the German Empire, the Russian Empire, and the
Japanese Empire -- there'd be whole lot less DX cards to collect, hmmm?

You might be interested in just what I would suggest were the
ARRL to suddenly need my humble opinion. In a nutshell, I would tell
them that the challenge of DX has less to do with point-of-origin than with
the path it has to take from orign to you (including everything inbetween
as well as tx and rx capabilities). I would treat any given QTH as a sort
of maidenhead square with points awarded for increasing distance and
modifiers (up or down) based on items such as size of ham population
in given "area", propagation conditions typical of the particular mode or
band, QRO vs. QRP, etc.

I think this would really awaken the hobby. It would shift the
hobby from its (IMO) emphasis on transmitter/amplifier, to a more
balanced emphasis on tx./amp./rx./antenna as a totality. (Yes, I know
it already is, but I'm hoping you know what I mean by this). Big Kahuna
title would go to the one with the most points, not neccessarily the rarest
or most numerous cards. GB working TT on 10W would almost certainly
get you more than KH6 working VP6 on a full gallon. On the other hand,
the power of QRO would continue to dominate pile-ups for those really
rare ones that would have sizable "up" modifiers. Applying the basic
DXCC rule of one card per DX entity/"square" would keep it from just
being another Contest Event. To be the best, you would truely have to
work the world and master many modes, bands, conditions, power levels,
etc.

If a fair way was found to award points for variations in propagation,
power levels, etc. it would mean it would be a *dynamic* system; the points
earned in one season, or area, or even QSO could vary from event to event..
Hence, presenting newer or changing opportunities. There wouldn't be an
ULTIMATE, merely an ever-evoliving set of possiblities to explore or exploit.
For my money, way, way more rewarding than just carving up the world into
smaller and smaller bits and pieces.

Just my two cents worth (and respectfully said),

Andrew

I read somewhere (can't for the life of me remember where!) they were going
to stick to the high bands - especially 15m - until near the end of the
expedition. They wanted to work as many unique stations as possible &
figured (IMHO correctly) 15 was the right place to do it.

Amateur Radio Newsline Report 1283 – March 15, 2002

Amateur Radio Newsline report number 1283 with a release date of Friday, March 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Restructuring at the FCC should not impact on Amateur Radio and a first for the Dayton Hamvention. These stories are first on Amateur Radio Newsline report number 1283 coming your way right now.

(Billboard Cart Here)

**

REGULATORY ISSUES : FCC REORGANIZES LATER THIS MONTH

A reorganization of the Federal Communications Commission is set to become final later this month. This, as the agency stresses that realignment of responsibilities between various bureaus will make it more efficient and help it better respond to a changing technological marketplace. Amateur Radio Newsline's David Black, KB4KCH, takes a look at some of the changes.

--
It's an independent government agency that reports directly to Congress. It's mission is to regulate communications. One of the services it oversees is Amateur Radio, but most observers of the reorganization of the Federal Communications Commission see little impact on hobby communications.

As part of the reorganization a new Media Bureau will combine the duties of the current Cable and Mass Media bureaus. The goal of the combined bureau? To treat competitors of multiple entertainment delivery systems equally and consistently. This includes broadcasters, cable operators and satellite service providers to name only a few.

Other changes include a renamed Consumer and Governmental Affairs Bureau. Also, a realigned International Bureau still will handle satellite licensing but most policy issues will now be the domain of the newly created Media Bureau.

These are just a few of many changes taking place. Most appear aimed at commercial interests. For ham radio, C-B, G-M-R-S and most two-way radio users the shift will probably be transparent. In other words, for these spectrum users and most others, it looks like business as usual within a soon to be restructured FCC.

From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline. Don.

--

Congress endorsed the plan late last year. The FCC then approved the overhaul in January. The changes will take effect March 25th. You can read more on the web at www.fcc.gov. (ARNewsline (tm) from published news reports)

**

RADIO LAW: FCC REFUSES TO SIDE WITH CB'ER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator who was convicted of Disorderly Conduct for using an 11 meter Class D Citizens Band Radio. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--
Gary D. White is among the first C-B operators dinged under a new authority granted by the Federal Government to states and municipal law enforcement agencies. Authority to control interference caused by operators of Class D 11 Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of operating his C-B equipment in an unreasonably loud, offensive, harassing or threatening manner. He was not convicted of violating any FCC rules. White believed that the citation was based on interference to a neighbors telephone and television receiver. This in itself is not a violation of FCC Part 95 rules. And because of this he also believed that local authorities had no justification to sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct allegation is not in its preview to consider. This is because no FCC rules were violated. Also, under a law enacted by Congress in November of 2000, state and local governments are free to enact laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will have to find other avenues if he wishes to continue his appeals.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Congress enacted the law to give state and local authorities enforcement authority over 11 meter C-B operators due to the rising tide of unnecessary and harmful interference to other people using radio devices in near-by spectrum. This includes corded and wireless telephones, television receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham radio is specifically exempted from the law and any ordinance it may be used to create. (W5YI Report)

**

HAM RADIO RIGHTS: NM. AND W.VA. JOIN THE PRB-1 BANDWAGON

The ARRL Letter reports that New Mexico and West Virginia have become the 14th and 15th states to adopt pro Amateur Radio antenna bills based on the limited

federal preemption known as PRB-1. Amateur Radio Newsline’s Jeff Clark, K8JAC, reports:

We have this report:

--
In New Mexico Governor Gary Johnson signed House Bill 314 on March 5th. This, after it easily passed both houses of the legislature last month with just two opposing votes during a short session that typically only deals with appropriations bills. Called New Mexico's "Emergency Communication Preservation Act" the measure was sponsored by State Representative Mimi Stewart and Senator Ramsay Gorham. It stipulates that municipal or county ordinances regulating Amateur Radio antennas cannot obstruct or preclude amateur radio service communications. Also, that such ordinances shall reasonably accommodate amateur radio service communications.

Here in West Virginia Governor Bob Wise signed House Bill 4335 into law on March 7th. The bill provides that antenna structures may be erected at heights and dimensions sufficient to accommodate amateur radio service communications but does not include a minimum regulatory height schedule. The measure also exempts Amateur Radio antenna towers constructed prior to the effective date from subsequent zoning regulation changes.

From Charleston West Virginia, I’m Jeff Clark, K8JAC.

--

In signing the West Virginia bill into law, Governor Wise, whose late father held the call sign W-A-8-A-Y-P, also proclaimed March 7 as Amateur Radio Operators Appreciation Day across the state. (ARRL)

AMERICA AT WAR: NEW TERRORISM ALERT SYSTEM

The United States has a new color-coded terrorism warning system. It was revealed on Tuesday, March 12th by Homeland Security chief Tom Ridge.

The five-level system is a response to public complaints that broad terror alerts issued by the government since the Sept. 11 attacks raised alarm without providing useful guidance. The lowest-status warning is green, followed by blue, yellow, orange and red as the perceived dangers intensify.

As the terrorism warning system was unveiled, Ridge said that the nation is on yellow alert. This means that the United States is facing a significant risk

of danger but not the highest stage.

The alert system is in force immediately for federal agencies, and Ridge is urging state and local governments to adopt it, too. It will be subject to a 45-day comment period, after which it probably will be revised. It's not known what part if any Amateur Radio will play in the new enhanced terrorism alert scheme. (Published news reports)

**

ENFORCEMENT: TAKE THAT UNCOORDINATED REPEATER OFF THE AIR

The FCC has told the operator of an uncoordinated North Carolina repeater to stop interfering with a coordinated machine, even if it means immediately taking his system off the air. This is the edict handed down to the operators of the NY4X repeater by FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH.

--
Hollingsworth: " We also notified Richard Howell, NY4X, of Greer South Carolina and John Parker, AG4AZ, of Brevard Norrth Carolina that upon reciept of the letter, the NY4X repeater that they operate had to either shut down, obtain coordination or submit a detailed plan to the Commission to prevent interference to the KU4OL [repeater]."

"Now this interference has been going on for quite some time. We notified Parker and Howell back in November that something had to be done. Nothing was accomplished in regard to coordination and nothing was done in regard to the interference."
--

Hollingsworth letter says that Howell and Parker had more than ample time to fulfill their obligation under Section 97.205 of the Commission's rules. And late word is that the repeater has been shut down. (FCC, RAIN)

**

ENFORCEMENT: TAKE THAT BROKEN REPEATER OFF THE AIR

The NY4X repeater is not the only machine currently under FCC scrutiny. Another one is in Northern California. This one is having technical problems and is causing interference to machines on adjacent channel pairs. Again, the FCC's Riley Hollingsworth, K4ZDH:

--
Hollingsworth: "We notified Wendall Peterson of Walnut Creek California, operator of the K6POU repeater that more than enough time has elapsed for him to correct the technical and control problems with the repeater. His earlier response to our inquiry showed that the bandwidth was indeed so wide that it caused problems to two other repeaters. We have gotten complaints about that. And the repeater system is just not operating in accordance with good Amateur practice."
--

Hollingsworth says that his office expects the problems with the repeater to be corrected or that the machine will be taken off the air. He also gave Peterson 20 days from the date of his letter to respond. (FCC, RAIN)

**

ENFORCEMENT: THE RESPONSIBILITY OF REPEATER OWNERS

The FCC enforcement involving the NY4X and K-6POU repeaters are just the latest in a series of actions aimed at cleaning up the problems that have been plaguing the F-M community. Whether it's an uncoordinated repeater causing havoc to a coordinated machine, or a long established system in need of maintenance, the FCC's Hollingsworth says responsibility comes with repeater ownership:

--
Hollingsworth: "We want to emphasize that repeaters are voluntary. Nobody has to put one up. But if you do put one up you have a responsibility to maintain it, to get coordination if that's necessary, and to operate in accordance with good Amateur practices, especially if other repeaters are being detrimentally affected."
--

In reality, the only things the FCC is asking of those who own and operate repeaters is to be good neighbors and to adhere to the proper technical standards. In this way, the repeaters themselves can better serve their service area and the ham radio community in it. (FCC, RAIN)

**

RESCUE RADIO: KNOWING WHERE YOU ARE IN THE MID WEST

If you drive the highways and by-ways of Kentucky, you need never worry again about where you are. And if you get in a bind, rescuers will be able to find you. That is, if you are a ham radio operator equipped with a mobile APRS station. Jack Parker, W8ISH, of Amateur News Weekly, says that in his part of the world it is a mode that is truly coming of age:

--
Good news from the Kentuckey Automatic Position Reporting Society" their network of APRS digipeters is growing like well bred Kentucky Race Horses.

According to Brian Walker, KC4FIE, several new sites will be coming on line very soon. New digi's are planned for Grand Rivers, Morgantown, Owensboro, Lawrenceburg, and Dry Ridge to name a few.

The Murry State University club has added a digipeter and two stations along the Kentuckey – Tennessee border have extended APRS coverage into that state. These efforts effective extend the Mid-West network of APRS digipeters established by the Tri-State Working Group in Ohio, Indiana and Illinois.

If you need more information on the Automatic Position Reporting System just check the APRS Working Group website at www.tawg.org.

Reporting for Amateur News Weekly, this is Jack Parker, W8ISH.

--

With interest in A-P-R-S growing and ham gear that includes the mode as a standard feature, look for a defacto nationwide network to be in place by the end of the decade. (ANW)

**

HAMVENTION 2002: HAM TESTS WILL BE AT THE HARA

The Dayton Hamvention has asked that we pass along a correction to some information in its recently mailed pre-show brochure. The pamphlet incorrectly lists Meadowdale High School as the venue for Amateur Radio license exams. This is incorrect. The Hamvention says that all license exams will be held at the HARA Arena Hamvention site. (Hamvention(r))

**

HAMVENTION 2002: QCWA BANQUET

And attention QCWA members. This years annual banquet in conjunction with the Dayton Hamvention will be hosted by the South West Ohio chapter and will be held on Friday, May 17th. The venue is Alex's Continental Restaurant near Miamisburg. Starting time is 7:30 P.M. and reservations are required.

This years speaker will be General Raymond Moorman. He will be talking about the United States Air Force Museum and plans for the upcoming Centennial of Flight celebration in 2003. For more information and to make reservations please contact Ed Sonnanstine by e-mail to EdSonny@aol.com (QCWA)

**

CONVENTIONS - UTAH: UTAH HAMFEST

The 2002 Rocky Mountain Division ARRL Convention and 2002 Utah Hamfest will be held July 12th to the 14th at Ruby's Inn at Bryce, Utah. The venue is near Bryce Canyon National Park. For more information please visit www.utahhamfest.org on the world wide web. (Utah Hamfest)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are being solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held this September in Denver, Colorado. Presentations will also be publicized in the Conference Proceedings. Submission of papers is due by August 5th and in-person presentation at the conference is not required for publication. Conference registration and additional details are available on the web at www.tapr.org/dcc (TAPR, ARRL)

NAMES IN THE NEWS: HELPING HAND NET

We want to take a moment to welcome a new and very interesting net to the Amateur Radio Newsline family. It is on the AD6XK repeater here in Los Angeles California on 145.440 MHz.

What makes this net very special is that its Control Operator Simon Rosconi, K6DXN, is visually impaired. According to Dave Estrada, KD6HDX, Rosconi lost his vision at age 6. Estrada says that even without sight, Rosconi works 40 hours a week, and still finds time to volunteer his time as control operator for the nets.

But Rosconi is not the only vision impaired ham involved. Estrada tells Amateur Radio Newsline that Brian Coponiti, KG6BVO, who is also partially blind, has also volunteered. Coponiti downloads and plays back Amateur Radio Newsline to the net.

Estrada adds that this particular repeater group also has two other operators that are visually impaired. They are Gary La Duke, WB6WJW and Ivan Simer, K6TTA. (KD6HDX)

**

NAMES IN THE NEWS: EDWARD T. CLEGG, W8LOY FAMILY CELEBRATION

A few weeks ago we told you about plans by the family of the late Edward T. Clegg, W8LOY, to celebrate the life of this ham radio pioneer. The gathering is being planned by Ed’s widow Martie, her daughter Linda and Linda’s husband Rob Mc Guffie, K2HZN. Recently, RAIN producer Hap Holly, KC9RP, had a chance to speak with Rob about the upcoming event:

--
NO TEXT AVAILABLE – AUDIO ONLY
--

Hap conducted an extensive interview with Rob Mc Guffie. It really tells the whole story of Ed Clegg and his famed Clegg Labs. Part 1 is online right now at www.rainreport.com or by telephone at 847-827-7246. (RAIN)

**

RADIO REGULATIONS: AVOIDING A PHONE NUMBER CRUNCH

The nation's supply of telephone phone numbers is depleting rapidly and the government is taking steps to make sure what is left lasts longer. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more:

--
Over the past several years, area codes have multiplied to cope with the

explosion in technology. Regions have responded by splitting up area codes among geographic areas or laying another area code over an existing one.

But in 1996 the Federal Communications Commission banned such overlays dedicated to specific kinds of technology. The Commission enacted the ban because it considered separate area codes for cellular telephones phones and pagers unfair to wireless companies and their customers. This is because everyone would have to dial 10 digits instead of seven to reach wireless customers.

But states including California, Massachusetts and Ohio had been been asking for ways to prevent existing area codes from running out of phone numbers, the agency said. The FCC says that it will now hear proposals from states on how they intend to conserve area codes on a case-by-case basis, including plans to use technology-specific area codes.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in West Orange New Jersey.

--

The FCC, which is responsible for overseeing the supply of phone numbers, says that without action the number pool will run out in less than ten years. (FCC)

**

HAM RADIO BUSINESS: A NEW HOME FOR VERTEX STANDARD/YAESU

Vertex Standard USA, better known in ham radio circles as Yaesu, is moving to a huge, beautiful new facility. The new address is Vertex Standard U-S-A, 10900 Walker Street, Cypress, California, 90630. The new main phone number is area code 714-827-7600. All e-mail addresses will remain the same but telephone extensions will change. Vertex Standard makes the move -- no joke -- on Monday, April 1st. (Vertex-Standard)

**

INTERNATIONAL-CANADA: VE7BFK IS NEW RAC ARDF COORDINATOR

Radio Amateurs of Canada has named Gordon Young, VE7BFK as it's news R-A-C National Amateur Radio Direction Finding Coordinator. Young replaces Perry Creighton, VA7PC who held that appointment for the past several years. (RAC)

**

CONTESTS: SOUTH WEST OKLAHOMA SPRINTS

The first ever South West Oklahoma Spring Sprints sponsored by the Lawton VHF Contesting Club will take place in just a few weeks. Sprints are short period contests held primarily on a specific band or using a specific mode. The South West Oklahoma Spring Sprints are band exclusive. The 2 meter sprint is on April 1st from 7 pm to 11 p.m. Central U-S time. The 70 centimeter sprint is April 13th also from 7 to 11 Central. Both are open to all Oklahoma hams living south of Interstate highway 40 and West of Interstate 35. For more

information e-mail ne0p@arrl.net (VHF Reflector)

**

DX

In DX, K8PT and K3PLV are in the Channel Islands and operating as MJ slash K8PT and MJ slash K3PLV from Jersey through the 19th of March. The emphasis is on CW and RTTY in the WARC bands during daylight and 30, 40 and 80 meters during the evenings. Q-S-L as directed on the air. (RSGB)

Also word that Laurence Howell, GM4DMA, who is now resident in Anchorage, Alaska, will be travelling to warmer climates. This, as part of his work for the youth development charity Raleigh International. Howell say that he plans to be active as V51 slash G4DMA from Namibia from the 16th of March for two weeks. Look for him on 160 through 6 meters as his work schedule allows. (RSGB)

**
THAT FINAL ITEM: A WEDDING AT HAMVENTION 2002

And finally this week, get ready for a first. The first ever wedding to be held at the Dayton Hamvention.

No, we are not kidding. For the first time in Hamvention history, wedding vows will be exchanged at the show. This as Cyndi Krieger and Mark Elliot, N8WZW, will be married Saturday, May 18th at the HARA Arena during Hamvention 2002.

Mark and Cyndi met about thirteen years ago through a mutual friend. On their first date Mark and Cyndi went out for dinner and a movie. According to Hamvention sources, they have been an "item" ever since.

Mark introduced Cyndi to amateur radio by going to a hamfest. Cyndi had no idea what a hamfest was, but it sounded interesting. It was and she was hooked! Cyndi is now studying for her license and may test for it before Hamvention weekend.

Why get married at Hamvention? Mark and Cyndi couldn't think of a better place to share their love for each other and for amateur radio than by getting married at the world's largest amateur radio trade show. The ceremony takes place at 3 PM in Forum Room 3 immediately following the Amateur Radio Newsline produced Ham Radio Town Meeting. (Hamvention (r))

|expedition. They wanted to work as many unique stations as possible &
|figured (IMHO correctly) 15 was the right place to do it.

Argh. It is true they picked 15 for the primary. Unfortunate for me since opted to build a 20 meter monoband Yagi as the real DX antenna <g>. But what the hey I just used the 40 M inverted vee to work them on 15 CW.

BTW, for all of you guys hooked on packet cluster, I worked them on 20 SSB on 3/18 @ 0234 on the first call. They showed up, worked a couple on simplex while I was rotating the beam. Then he announced he was listening on .200. I went up to 201.5 and snagged him. According to later research on the DX-Summit web site, this was 13 minutes before the first spot showed up.

Piece of cake if you don't sit around waiting for all of the competition to show up.

Yes, but in such cases some other criteria apply - a certain separation
from the mainland by water or another country, for example. Native
reservations are apparently just considered part of the country they
are situated in (USA, Australia, Canada, ...) just like the autonomous
republics in Russia. Nevertheless, if you want, there are awards for
having worked almost any sort of entity you can imagine. No need to stick
to DXCC - there is IOTA, WAZ, P-150-P, ... and you can always create
your own award and advertise it, if you want ;-).
Besides, I believe the real fun is in working the particular corner of
the world (and having it confirmed, if possible) , and not in the
"wallpaper" which says no more than you could count in your shoebox full
of QSL cards ;-)

> band, QRO vs. QRP, etc.

Maybe this is already becoming a bit too complicated - but there is
a worldwide locator contest every March, and AFAIK also an award for having
worked so-and-so many "squares" on HF, not only on VHF. Makes perfect
sense to me, perhaps more so than political boundaries which shift
every now and then for whatever reason, or trying to accommodate other
artificial criteria. Maybe a distance-based point system would be fine,
too. Band points would be too difficult because propagation changes too
much. Still, I like this idea.

I was a very keen DXer on 40m and when I get a better QTH that will allow me to put up a good Dx antenna I will be back on the band, I have worked 48 states ssb on 40m, I used to join a net I think run by a station in illinois anyway a K9?
and worked 100's of US stations also every contest I go on and gove every one Stateside a point But as far as calling and working Split its difficult, firstly finding a clear freq there is probably only about 6 clear spots here for me the whole of 40m above 7.1 is 30+ over 9 QRM and the only 6 spots are when there is an opening are usually used by stations talking Locally over there or someone else is calling on the working Split.
I use an FT-1000MP and an ALPHA 99 but my antenna is not good as I live in a ground floor apartment, when I get a QTH in the country I will be back on 40 chasing the two states I need and will be working Split.
Why can VE stations work below 7.1 and not you? maybe just giving you from 7.075-7.100 should be put forward to the FCC or whoever is in charge.
Good Luck I will certainly listen above 7.1 when I am back on with good antennas I have wkd 288 countries on 40m need KH6 and Wyoming on 40m and just Wyoming on 80m for 5BWAS got all the rest confirmed.
Take Care Roger GW4OFQ
my web page is under construction www.rogerradio.co.uk in two weeks it will be a great site.

As a resident of Canada's most easterly province thank you for the mention of the oldest yet discovered Viking settlement in North America. It is/was at Lanse Aux Meadows on the tip of the Great Northern Peninsula of the island portion of this Canadian province, of Newfoundland and Labrador. Their leader was Leif Erikson sp? (Eric the Red?) Lanse Aux M ..... actually means "Bay of Jellyfishes", from the Spanish/Portuguese 'Meduse' for jellyfish which are still abundant today.

And the Portuguese and Spanish etc. were over here too! Including Basque whaling stations at Red Bay Labrador well before the mid 1400s! But that's another bit of history.

I guess Leif's call sign would have been V1KNG! Strictly manual operation though.

International recognition of the site excavations and discoveries have confirmed that 'Europeans', Norse Vikings from Greenland settled, lived there, forged metal and so on, for at least several years just before 900 AD. There is some indication too that from there they explored south along the North American coast, past what is now Nova Scotia Canada, possibly as far south as Boston, New England etc. In the Viking Sagas for example they describe grapes which do not grow, naturally, this far north; even if the climate was warmer back then.

And oh yes, they got into squabbles with the existing residents, whom they called 'Skraelings'; I guess today we would use the term 'First Nations People' or perhaps 'Original or Aboriginal Inhabitants' who had been here we gather for thousands of years!

I would imagine that the Vikings were using 'Muscle Power' at the rate of about half a kilowatt per oar per hour; plus wind power. BTW the Viking voyages were commemorated some years ago by modern day adventurers who used satellite navigation, amateur radio and more comfortable living

conditions!

There is also some historical indication that the Irish monk, St. Brendan journeyed to North America in an open leather boat made from sewn cattle skins, tallow etc. around the year 840 AD, before the Vikings! That was also re-enacted some years ago. Thus proving that those voyages were possible even if dangerous with the technology available back then. No coastguard watch on 2182 kilocycles or Transatlantic jets overhead monitoring 121.5 megacycles, daily skeds on 20 metres etc. back then, eh?

So the recent allegation that Chinese adventurers had journeyed around the world including visiting the Caribbean area, in the early 1400s, while maybe interesting didn't elicit much excitement here in view of the above history!

Terry.

A few miles from where, more recently, in December 1901, Marconi received the first transatlantic wireless telegraph signal at St. John's Newfoundland from Cornwall England.

|Yeah - piece of cake ... if you have time to sit on their expected frequency
|a lot, and if you happen to get lucky. I've tried, but no luck so far. :)

Hang in there. I was already listening to the mess on 15 CW so it was easy to keep checking 20. I just programmed a few memories with the expected frequencies along with some splits and turn the knob occasionally.

BTW, a search at DX-Summit for 15 CW at the same time frame shows them on 21.020 +/- and guys working them as high as .057. I didn't bother, but waited a couple of days and worked them after two or three calls.

Which points up the problem (or the solution) to some of these expeditions. When they first come on, there is a total feeding frenzy. A week or so later, you can work them just to say hello and to keep them from being lonely. They will be there another six days. You should have plenty of time.

Besides, it's not like Ducie will never be on again. As stated on the web site, the Pitcairn ops are being trained so they can make the next trip.

One last thought to put all this nonsense in perspective. So what if you never work Ducie. When you are on your death bed will you be saying, "Gosh, I wish I could have worked Ducie"?

Not yet. The most recent information that I've seen said that the cards had
just been printed and received by the manager. So, we'll probably see them
pretty soon.

Sometimes this doesn't work out to well. I couple of years ago, a major DXpedition had to leave early because of the weather and all the guys who were waiting for the pile-up to die down missed it.

Hello Steve,
That is egg-zackly right.....it is always the prudent thing to do to work the DXpedition as soon as you possibly can. Any number of things can affect when they have to go qrt...

1. weather
2. equipment failure (esp. generators)
3. antenna damage
4. only transportation back arrives early
5. sickness among the operators
6. political - they kicked-out unexpectedly

I'm saving for a new HF radio, but for now it's a TS 520 - tube finals need retuning if I only move from CW segment to fone, let alone changing bands. The analog frequency dial needs to be re-calibrated against the marker generator whenever I move more than 50 or 100 kc's. "I just programmed a few memories" is a pipe dream for a couple years!

I'll get them eventually. and I won't be upset if I don't. It's just a challenge I'm working on right now.

HI8A was JA5DQH .... I suggest that the listing in Buckmasters and/or other
sources was incorrect - as far as K3WGR is concerned. If all else fails,
I'd try sending a QSL via the JARL Buro to JA5DQH ... although he does have
an address listed in one fo the online logbooks.

They qualify under other criteria. Granted, there are some entities that do not qualify under any current criteria
at all, but those have been kind of grandfathered forever (EA6, IS0, UA9, 4U...). Then there are some that are
complete nonsense (CY9 comes to mind) and some that are stretching it (SV/A). You have to lay down the rules and
draw the line somewhere to prevent the DXCC program from becoming a joke.

The problem with declaring this type of a political arrangement a separate DXCC entity is that, if allowed, tomorrow
we'll have over 1000 DXCC entities. The world is full of well-defined geo-political areas, special status zones,
autonomous regions and what have you... Just how many Indian reservations are there in the US alone? We don't need a
thousand CY9 debacles and that is why all those neutral and demilitarized zones were declared ineligible years ago.

1100. Ducie Island Operation seems to upset everyone

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-22 07:33:45 UTC
From: thompson@mindspring.com
Message-ID: <a7emjg$vg1$1@slb6.atl.mindspring.net>
Source record: 13876

The VP6DI Ducie Island Expedition seems to have upset nearly everyone. I hear Europeans, South Americans. Australians, and some in Ort America complaining. Europeans say they work only JA and North America. South Americans and Australia say they don't even listen for them. But wait a minute...Ducie is a new Country for DXCC and the plan was to work 21Mhz as the primary band and this has worked well (even if it took me 5 hours over 2 days to work them). I worked Mike VP6AZ on 10 and he is learning fast. I got them on 40 on first call but have not heard them on 17 and 24 until today when the VP6 YL got SSB privileges. There was a 30 minute window (at 57 to 8)
but I only had my 100 Watts so no QSO yet. She was gone for 1 and 1/2 hours and when she got back the JA's and west coast had the skip. So I hope she will be back so I can work Ducie on 24 SSB.

On 14 SSB I have heard them 3 times. The first JA1BK was running JA. The second they tried simplex on 14195 and when the roar cleared they were gone. The last was tonight when the operator tried to work NA by districts (he said he would work NA them Europe but I guess only I heard that). He worked a K2 and nothing in W3 or W4. By the time he got to W6 some of the out of call area callers had gone although his frequency was filled with complaints. How much right do these hams have to complain if he could not work anyone in my district for all the fuss? They not only complained by called and called and called!

I understand they have extended the Expedition but there will always be next time. The Dxpedition had to take along the VP6 hams as this was their Dxpedition and I think that is great. I remember working Tom VR6TC (now VP6TC) when all he had was a small hallicrafters
receiver and DX35. I still treasure that along with one from long SK VR6AC for 2 way SSB, I have VP6 on 80 to 10 including the 17 and 12 meter bands many times. I even have a scratched out VP6 160 CW contact too. I am sure I will get Ducie on all these bands too. Right now the main goal still must be to work the maximum number of hams for new DXCC credit. Working them on other bands is still secondary. I have over 300 countries on all the bands 80 to 10 (except for 30 meters which I don't work) and if I can wait and have patience then so can everyone else. Good luck to all on working the new country and please stay cool.

This is probably the reason for the different "treatment" of Russia and
Turkey, namely why TA1 is not considered a different entity from the rest
of TA, which I mentioned in one of my other posts on this topic?

Besides, not all UA9 is really in Asia, i.e. east of the Ural mountains.

> You have to lay down the rules and
> draw the line somewhere to prevent the DXCC program from becoming a joke.

Probably, yes. But anyway, as much as I enjoy working the "new one"
every now and then, I will probably never apply for DXCC. I'm quite
content with the QSL cards which hopefully will arrive some day ;-)

I would like to take Dave's thoughts a step further...

Why on earth are we complaining at all about who DXpeditions are working?

These folks have made an expensive, dangerous, and uncomfortable trip. Ducie is not Club Med - they aren't basking in luxury. And they most assuredly are not coming back home to Pitcairn with huge riches.

So what obligates them to operate in a certain way? If they *want* to favor JAs, isn't it their right? If they like 15 meters and really don't want to work 20, isn't it their right? If they don't have the skills to work 200 QSOs per hour through ruinous QRM and uncooperative Stateside lids, should they just stay home? (could you do any better? I doubt I could..) If you can't catch them on PSK31 because they're too busy trying to maximize the number of unique calls working an all-time new one, does that make them jerks?

As with *ALL* DXpeditions, this is THEIR expedition, THEIR effort. They are obligated to obey their government's laws, to be honest -- and to have a good time. Nothing else.

> The VP6DI Ducie Island Expedition seems to have upset nearly everyone. I
>

Dave,

Really, my only complaint is the way that they have
taken over 30-40 khz of the 15 meter band. I also
listened while the VP6 operator said that he was
listening from 14.200-230.

I have not been on the air all week, so I don't know
if they are still operating with these kinds of wide
splits or not, but judging from the usenet messages
they are. I think a wide split like that makes it miserable
for everybody!

As long are we are talking about poor DX'pedition
operating, what about the XR0X operation? I listened
to this fellow go over 20 minutes without ever giving
his call!?! How efficient is that? Many of the fellows
working this guy must have gotten the DX call from
the DX cluster. I'll bet most of them were never really
sure of just who had just given them the 'ol AA1ABC
ur 59, QRZ?

Jeeze!

Off the soapbox now...

No kidding. It sounds extremely uncomfortable there - heat, insects biting, no amenities. Probably sand everywhere in their clothes, sleeping bag, etc. Catching sleep a few hours at a time, wolfing your food down as fast as possible so you can get back to the pile-up of rude ops. Damn, I wish I was there!!

No, they can work whoever they want, as far as I'm concerned.

I believe that 9X0A (currently in Kosovo) is the same person who was active
from 9X0A in '97. Check out his homepage at:

http://www.qsl.net/9x0a/

In fact, there's a statement at the bottom of this page suggesting that
those having problems confirming 9X0A should contact the QSL manager (DL5WM)
by e-mail at: mailto:G.GERTH@KSG-HEIZELEMENTE.DE.

1109. XR0X Log Wrong

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-22 15:38:37 UTC
From: Edward Lewis <kq6dx@pacbell.net>
Message-ID: <9ljm9u8kbugk709ce063fik9v52a9h8ab8@4ax.com>
Source record: 13885

I looked up my call on the XR0X online log, and they had me in the log as two 20 meter contacts. I worked them once on 10 meter RTTY and once on 10 meter SSB , and no 20 meters. Anyone else have a problem with the log .

I would not compare the VP6 operation to the XR0 operation.
I was able to work the XR0 operation on 20/15/10M , the bands my
tribander covers. Listen, Listen and Listen is the key. One can monitor
the listening trend of the dxpedition station and work them. Timing is
also a factor. Very early mornings from the W4 area and the evenings, when
the west coast is still at work were good times for me.

As far as VP6, I have still been trying. But its difficult. I am sure my
signals with my Amp are getting thru. But the wide split and the
quick QSY of the operator from his listening freq is causing grief to
all. Hey , the split was introduced to add some probability. I believe
he can stay on a frequency so long as he is able to hear folks lining up
and not piling up. This is where the XR0 has fared better.

These are just my opinions based on my experience.

Thanks, Rich. QRZ.com gives the QSL route as RW3AH, Andy's home address.
Pathfinder is taking eons to load, so I can't check other route databases.
betcha I sent to his home call, however. I'll try the DL5WM route next.

I remember that contact well. I'd only had an HF transciever for a month
or so, and had been working lots of EU and SA. What a novelty, then, to
hear a station from deep in Africa!

I hear this complaint about every major DXpedition and I don't think it's justified.
From the point of view of utilization of resources, there are a lot more hams using
that 30 khz than there would be otherwise. From the point of view of efficiency, the
dx station will have a higher QSO rate if the pile-up is spread out.
It's true that some regularly scheduled QSO's will have to move and it's possible that
a few QSO's in progress may be interfered with and be forced to move. But it seems
to me that the benefit to the general amateur community is greater than the inconvenience
caused.

We talking about the same Packet Clutter? So far, half the
spots for the VP6 have actually been for the XR0X. Anyway, have Ducie on
five
band modes, the first three were made on March 17th.
Got most of the spots on the packet cluster, and no problem working them
through the mess from the east coast. Most enjoyable contact was with the
YL on 24902 cw.

Krish,

I completely agree. I did work the XR0X. Not a
problem, except that I did Listen, Listen, Listen
and listened some more, and I still did not hear
him give his call.

How difficult is it so simply say, "AA1AAA ur 59,
DX1X QRZ? Instead all I heard was: AA1AAA ur 59 QRZ?

Like I mentioned before, this fellow was going on
like that for a very long time before somebody
asked "What's your call?"

Because I dislike calling blind, I waited until I
heard the operator ID before I even began callling,
and worked him almost at once.

Just one ham's opinion, your results may vary.

Steve,

First, I will have to say that my experience with
the VP6 is mostly as an observer, since I have not
wanted to participate in that mess.

I think that we will not agree on this point. In the first place,
its NOT every DX'pedition that does this. Many successful
expeditions have run their course without taking an
entire band (or significant portion), to do it. There are
many ways to thin out or otherwise control a big pile-up.

Remember that not too long ago, a contestor got an FCC
love note when he operated split and wiped out a QSO
on his transmit frequency? This is no different. You can't
tell me that each and every DX'er checked his transmit
freq before hollering in the pile. I was there when an extremely
irate VK came up on the VP6 transmit freq and asked
one of the stations to QSY because he was trashing a
QSO in progress.

This is not good operating practice.

Sorry, that's how I see it, and I really like competing
in a pile-up, but not a mess like that.

Gary,
I do agree with you.
The call was not sent out periodically.
That would test anyones patience.
I like the OH2 cluster since it gives an idea about
the propagation as well. One can also see the mess
thats going on at a certain frequency.

About transmitting on the split range, i pity the
poor souls who are having a QSO in that part of
spectrum.

I overheard 2 stations in a conversation on 20M and one
remarked " Looks like the gentleman is working the
whole band" :)

cheers

Hi Gary,
I agree that not all DXpeditions operate this way. Nor do all of
them have to. However this complaint is common when the very
rare countries are put on the air and it's hard do find any country
(entity) that's more rare than Ducie island is right now.
I also agree that it's bad operating practice to start calling on
a frequency without checking it first. But it's pretty silly for someone
to show up on the DX stations calling frequency complaining after
the pile-ups been going for a couple of hours. It seems to me that
after the pile-up is well underway, that the use of the DXers listening
frequencies by the calling stations is pretty well established. Anyone
starting up a QSO on those frequencies would be interfering with
the current users.
I don't think your characterization of the DXpedition "taking an
entire band (or significant portion)" is quit fair. If they are listening
from
14200 to 14230 plus 3 kHz for the DX stations' calling frequency that's
only 33 kHz out of the 200 kHz phone section (about 16%).
The way I see it, the DXpeditions get a bad wrap. Almost all the
DXpedtions operate in the same way on the same frequencies. I would
have thought anyone with any sense would have figured out that 14195
and 14200-142?? is likely to be busy when there's a major DXpediton.
Under the circumstances, I think the Ducie DXpedtion is doing a
good job of making the country (entity) available to the ham community.

I love working DX, but I must disagree. What is the "benefit to the general amateur community" of having a DX station open up and by his operating procedure proceed to QRM QSOs in progress.

Split operation originally was used just to keep the DX station's transmit frequency clear. He transmitted on frequency A and listened on frequency B. Now they listen on C, D, E, F, ... and points in between. I think at best they ought to listen on B and C and leave the band alone for the rest of the folks.

After all, he can only listen to one frequency at a time, so what is the point of having people calling on dozens of frequencies. Any frequency he listens to will have a pile up anyway, he just needs to deal with it. Work the strongest signal or the one most clever at getting his call heard and move to the next strongest. He can lower the number of callers by selective requests, ie, EU only or W7 only but that should be the limit.

For us that do not use a packet cluster to determine where he is listening it is a lot easier to determine by careful listening when he has one of two listening frequencies than when 30-40 KHz of the band is covered by guys dropping their calls. And when there are two expeditions operating and neither give their calls often enough it is a real problem.

Nevertheless, I got them on SSB and CW so I'm happy.

I thought that for a QSO to be valid for DXCC, you had to "exchange
both callsigns". Does hearing the expedition's callsign 10 minutes
after the QSO count as "exchanging both callsigns?"

I am trying to get a QSL from 3B8. So far, I have worked 3B8CF in April of '01, 3B8FG in July and 3B8/LA7MFA in November. Has anyone had any success with any of these? If so, what route worked? I have tried direct with green stams and via WF5E QSL Service with no luck. Any help will be appreciated.

73,

Phil - WB4KMH

1130. DXCC and Ducie QSL Card Question

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-23 20:02:22 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3C9CDF4E.1F52FF18@erols.com>
Source record: 13806

When will the DXCC Desk begin to accept QSL cards for the present Ducie operation? I may have missed the ARRL announcement, if one was distributed. Thanks.
Murray, K3BEQ

I believe the cards will be accepted after the March 31 deadline for this submission period. That way, all will have a fair entry and everybody will be even, Somebody trying to get the card in before the dealine to increase their total, while others mail have already submitted their latest submission, without Ducie, and don't want to make 2 submissions a year, an additional $20.

Jeff Y.

++Thanks Jeff. As I understand the DXCC rules however, members
can make one submission in a Calendar Year for $10. The next
submission within the CY would be $20. March 31 is the cutoff for
Honor Roll appearance in QST. September 30 is the cutoff for appearing
in the DXCC Journal, sometime during the spring of the following year.

Since the DXCC desk is in very good shape according to the latest
data from the League, Im hopeful that the Ducie card would be
accepted between now and September 30. Between April 1 and September
30 would be ok too.

Again thanks.

Amateur Radio Newsline™ Report 1284 - March 22 2002

Amateur Radio Newsline report number 1284 with a release date of
Friday, March 22nd, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio and the FCC join forced to find a wayward transmitter jamming a fire department radio. This story is first on Amateur Radio Newsline report number 1284 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS ASSIST IN TRACKING DOWN WAYWARD TRANSMITTER

Ham radio operators teamed up with the FCC to track down a wayward transmitter. One that was making communications very difficult for the Fallbrook California fire department. It took place the weekend of March 10th. Amateur Radio Newsline's Norm Seeley, KI7UP, has the rest of the story:

--

Milt Davies, KD6UBA, is Division Chief of the North County Fire Protection District. He was the first to identify the problem as radio frequency interference.

Davis described the annoying signal as being an unmodulated carrier pock-marked with strange data-like bursts. Sometimes the jamming transmitter was on-the-air all the time. Sometimes it was on and off. And at still other times the signal almost disappeared - transmitting only a few seconds in a 10 or 20 minute span.

Davies recognized the problem as on-channel jamming. He also knew that he needed outside help. That's when the FCC and the local ham radio community were notified.

First to try was the FCC. As you know, the agency has a series of permanent direction finding stations on the West Coast. These can be operated by remote control from Washington, D.C..

The FCC's weekend duty officer attempted to pinpoint the source of the interference using them, but with only partial success. Some of the locations were down for servicing. The result was a single line-of-bearing. This meant that the interfering transmitter could be anywhere along a 45 mile path.

To help home-in on the transmitter's location, members of the Palomar Amateur Radio Club were called out. They were asked to listen to the fire dispatch frequency and give signal strength reports on the unmodulated carrier. These

reports, coupled with the FCC's own line-of-bearing, pointed to the City of Vista, or vicinity.

Now the hunt again became the domain of the FCC. Bill Zears, the District Director in charge of the FCC's San Diego Field Office, arrived with a sophisticated direction finding vehicle. Zears drove to Fallbrook for his first good bearing. That sent him off toward the rugged eastern portion of Vista.

At about the same time, a fire broke out in the Camp Pendleton military complex which borders Fallbrook. The jamming signal was preventing firefighters working the Pendleton fire from communicating directly with their Dispatch Center.

Zears stayed on the job as Sunday afternoon turned into evening. Finally, enough direction finding bearings were available to pinpoint the wayward transmitter to a 30' tower atop a hill in east Vista.

The Vista Fire Department was called. The Battalion Chief on duty offered immediate help. It turns out that a local ham had brought him up-to-speed on the interference case earlier in the day.

Then another ham recalled that the City of Vista once had a transmitter up on the suspect peak. That old VHF transmitter dated back to the days before most communications had moved to the 800 MHz band. He also knew that the old box just happened to be tuned to Fallbrook's current VHF dispatch frequency - because that was Vista Fire's old frequency!

The crew lost no time in getting up the hill and confirming the location of the offending transmitter. Nobody knows why power was still connected. Probably an oversight by some long forgotten radio installer. None the less, it caused the Vista's Fire Department to unintentionally jam Fallbrook, but pulling the power plug made the interference go away.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Thanks to the cooperation of everyone involved and the tenacity of FCC District Director Bill Zears, the situation had a happy ending. (W6VR)

**

OLYMPICS FOLLOW-UP: HANDI-HAM CARRIES OLYMPIC FLAME

The 2002 Winter Olympics may be over, but now comes word that a visually impaired ham radio operator was among those who had the honor of carrying the Olympic Torch.

Kitty Hevener, WB8TDA, and her trusty guide dog SunStar, carried the Olympic Flame on Saturday January 19th. This, as it made its way to Salt Lake City Uath. Kitty’s segment took the flame up to the gates of Fort Point, in the shadow of San Francisco California’s Golden Gate Bridge.

According to the Handi Hams, Kitty Hevener, WB8TDA, is active with that group as well. Handi Hams says that she is a regular volunteer at the annual California Radio Camp held at Camp Joan Mier in Malibu California every March.

You can see photos of WB8TDA carrying the Olympic Torch at www.graystuff.com/gallery/kitty. (HandiHams)

**

ECONOMICS: JAPANS ECONOMIC RECESSION MAY AFFECT RADIO PRICES

The price of ham radio gear and other goods manufactured in Japan may soon change, but its unclear if it will be up or down. This on word that Japan's economy has fallen into the worst recession in at least two decades. The last time the Japanese economy contracted for three quarters straight was in 1993, when it shrank at around 0.1 percent each quarter. Before that, Japan had never seen even two back-to-back quarters of contraction - the usual definition of a recession - since the government began keeping such records in 1980. (ARNewsline(tm) from published news reports and ARNewsline(tm)interviews.)

**

EMERGING TECHNOLOGY: WSJT TAKING ON THE WORLD

Meantime, a new mode of operation seems to be taking Amateur Radio by storm. We have reported on it before: WSJT. And it lets everyone get in on what used to be the esoteric operation called meteor scatter. Q-News Graham Kemp, VK4BB, looks at the way WSJT is taking on the world:

--

WSJT is a digital mode, designed specifically for meteor scatter communications. It stands for Weak Signal communications by Joe Taylor K1JT. Its advantage for is that it sends extremely fast in a standard SSB bandwidth at 147 characters per second or about 1700 words per minute. By virtue of this speed it is possible to send two call signs and a signal report in a tenth of a second meteor ping.

The equipment to make WSJT contacts is fairly modest. A two meter SSB transceiver and a computer -- a Pentium, at least 75 MHz is the main hardware required. Then you need a simple PSK-31 interface box, as described in March 2000 AR magazine and some WSJT software.

An RF power output of 50 is the practical minimum, with 100 watts providing a worthwhile improvement. A major advantage with WSJT is the small antenna system required. A five element Yagi will do as well as a 10 element Yagi.

From Q-News Australia, I'm Graham Kemp, VK4BB for the Amateur Radio Newsline.

--

More information and the necessary software is at the official WSJT website. Its in cyberspace at pulsar.princeton.edu/~joe/K1JT. (Q-News)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the CARES repeater on 146.73 MHz and serving Gulfport Mississippi.

(5 sec pause here)

**

ENFORCEMENT: THAT CHARGE SHOULD NEVER HAVE BEEN FILED

The FCC has told a Midway, Tennessee ham that his complaint about a club repeater has no basis in fact:

--

Hollingsworth: “We dismissed a complaint filed by Jeffrey Bible, K4MFD, of Midway Tenneseee. His complaint was against the Andrew Johnson Radio Club repeater W4WC which is located on an adjacent tower.”

“We found that despite allegations, the W4WC repeater had not lost coordination just because of a move. The move was within the coordinators limits. In fact, the repeaters have been operating for years with no problems.”

--

That was the FCC’s Riley Hollingsworth, K4ZDH who also says that both parties are coordinated, so both will have to work together to solve any interference that might arise. (FCC, RAIN)

**

ENFORCEMENT: FCC REFUSES TO INTERVENE IN ATV REPEATER DISPUTE

The FCC has also declined to intervene in a dispute involving two Mid-West Amateur Television repeaters. One owned by a major radio club and the other by an individual. The main reason. There is no coordination for ATV in the area. The FCC’s Riley Hollingsworth explains:

--

Hollingsworth: We notified Adrian Oaks, KB8GRJ, of Xenia Ohio that we would not get involved in a dispute that he has with the Dayton amateur Radio Association over the operation of an ATV repeater. Dayton’s repeater, W8BI, has started occasionally operating on frequencies registered to Oaks. I emphasize registered nor coordinated. There is no coordination program there for ATV repeaters. But there’s no showing of actual interference.”

“DARA uses it for 20 to 45 minutes a week. It makes the repeater codes available to all so that anyone receiving interference can shut off the repeater. It is (also) willing to adjust operating times to accommodate other ATV users.”
--

Hollingswoth says that there is no real conflict and therefore the situation does not warrant any FCC enforcement action. (FCC, RAIN)

**

ENFORCEMENT: PRE OPERATION LEADS TO LICENSE SETASIDE

The FCC has told a newly licensed ham that his license grant has been set aside. In a letter to John A Green, KG4RFI, of Mobile Alabama, the commission says that it has information which indicates that he operated on the W4IAX repeater and was also heard at various times on repeaters on 146.685 and 147.090 MHz in the Baldwin County area. The FCC says that all of these transmissions were made during a time that Green did not hold am Amateur service license.

Green was given twenty days from the date of the FCC letter to him to write back and explain certain issues. This includes any instances between the cancellation of his General Class license on September 14, 2001 and the grant of his Technician Class license on January 24, 2002 in which he operated any Amateur Radio transmitting equipment. (FCC)

**

BAMES IN THE NEWS: KD7DDG LOOSES AZ MAYORAL RACE

A follow-up to the story of Tim Weaver, KD7DDG, who was running for the office of Mayor of Glendale Arizona. Well, the votes have been counted and Weaver was not successful in his bid to oust the eight year incumbent Mayor who had the backing of the firefighters union.

The count showed that Weaver had polled only about 24% of the votes needed. Weaver says that the results were disappointing, but respectable for someone outspent and out-volunteered. (RAIN)

**

NAMES IN THE NEWS: RAIN CONTINUES CLEGG RETROSPECTIVE

Hap Holly, KC9RP tells ius that this weeks RAIN Report is part two of a retrospective look at famed ham radio pioneer Edward T. Clegg, W8LOY. This as seen through the eyes of his son-in-law Rob Mc Guffie, K2HZN. Its on line right now in digital streaming audio at www.rainreport.com or analog telephone audio at 827-847-7246. (RAIN)

**

NAMES IN THE NEWS: N9RLA FIRST CENTRAL DIVISION ROVER CERTIFICATE

Some names in the news. First is Dan Evans, N9RLA, who has taken first place as a rover station in the ARRL Central Division. This in the June 2001 VHF contest. Dan is from Scottsburg Indiana. (VHF Reflector)

**

NAMES IN THE NEWS: K8JAC NAMED KANAWHA HAM OF THE YEAR

Also, congratulations to Amateur Radio Newsline's own Jeff Clark, K8JAC. This, after being named Kanawha Valley Amateur Radio Operator of the Year 2002.

A ham since 1981, Clark's Amateur Radio volunteer activities include the post of Emergency Coordinator of Kanawha County, West Virginia. He is also Publicity Director of the Kanawha Amateur Radio Club, editor of the clubs newsletter and technical coordinator of the W8GK repeater. But thats not all. The local ARES group, which Clark coordinates receives high marks from county officials and is often called on to provide communications during civic events and emergencies.

Clark received his award on Saturday, March 16th at Charleston Hamfest. Another Amateur Radio Newsline anchor, Jim Damron, N8TMW, had the honor of making the presentation to K8JAC. (ARNewsline(tm))

**

NAMES IN THE NEWS: WA6ITF TO SPEAK IN JOPLIN MO

Amateur Radio Newsline producer Bill Pasternak, WA6ITF, will be the featured banquet speaker on Saturday April 13th at the Joplin Hamfest. The venue is the John Q. Hammon Trade Center in Joplin Missouri.

Situated about halfway between Tulsa Oklahoma and Kansas City, the Joplin Hamfest is a 200+ table event. It also features spacious parking with easy access, wide aisles, forums, ham radio testing and prizes.

Interested? More information is on the web at www.joplin-arc.org. (ARNewsline(tm))

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

ANNIVERSARY: HAPPY 20TH ANNIVERSARY HEIL SOUND

This week marks the 20th anniversary of a very special company. We are talking about Heil Sound Limited. And when you talk about Heil Sound, you are really talking about its founder Bob Heil, K9EID.

Over the years, Bob Heil has been an audio consultant, an inventor, a musician and lots more. Looking back, He says that everything harkens back to his first love. His hobby. Amateur Radio:

--

Heil: "It's been an incredible ride from a little kid playing pipe organ in the Fox (theater)n through playing with my Harvey-Wells and SX-99 which I still have, and understanding what it took to make all of these things.

“Then I started building different transmitters and then started building sound equipment.”

“We actually changed the world. We are the guys that figured out how you stack and hang speakers. Why? Because I could set up a Rohn 25G (tower) and hang speakers higher than anybody else because of my ham radio.”

--

After years of touring with such number one acts as the Eagles, Bob decided to give something back to the hobby that had lead to his success. Thats how Heil Sound Limited was born.

--
Heil: My life has evolved around 45 years of being K9EID, and I will always be so grateful to everybody in this hobby for allowing me to do my thing and along the way to help someone. Thats the bottom line that we are able to help somebody and it makes me real happy to be able to do that.”
--

Bob is now celebrating the beginning of the company’s third decade with a number of new and innovative products for every aspect of ham radio voice operations. You will get to see all of them in a few weeks and meet Bob in person at Hamvention 2002. (ARNewsline(tm))

**

HANDI HAMS: E-NEWSLETTER MAILING CHANGE

The Handi Hams says that it is changing the way in which the groups weekly e-letter is being distributed in HTML format. According to Handi Hams Pat Tice, WAZ0TDA, constant barrages of virus threats to Microsoft Outlook makes it risky to continue maintaining the HTML list in Microsoft Outlook. So the group is moving its list to a mailer called Group Mail. This says Tice will be bring with it minimal risk of sending a virus to the group of HTML subscribers. The text subscribers continue to receive the e-letter through Yahoo Groups. (HandiHams)

**

EVENTS: 2002 WEAK SIGNAL BANQUET

Tom Whitted, WA8WZG, reports over the VHF Reflector that tickets are now on sale for the 10th annual Weak Signal Banquet. This year the gathering will again be held in Dayton Ohio on Hamvention weekend. If you are interested in attending, more information is in cyberspace at www.wa8wzg.com. (VHF Reflector)

**

INTERNATIONAL - CANADA: RAC SM ELECTION RESULTS

From our neighbors to the North comes word that Tom Caithness, VE1GT is the interim Section Manager for Canada’s Maritime Provences. He was elected for a two-year term, which began March 1st.

Also, Derek Hay, VE4HAY was recently re-elected Section Manager in the Manitoba for a two-year term snd Joe Craig, VO1NA has been re-elected Section Manager for the Newfoundland and Labrador Section for a two-year term. Both take office on July 1st.

All three ran unopposed in their respective Radio Amateurs of Canada sections. This eliminated the need for a balloted election. (RAC)

**

DX

In D-X, the big story is of coarse Ducie Island. The VP6DI team came on the air on March 17th and its was bedlam. Take a listen.

--
audio here
--

Ducie Island is a small, uninhabited atoll in the South Pacific and is part of the Pitcarin Island chain. It is also among the rarest DXCC entities in the world as proven by the recording you just heard. It was made in Australia by VK4DX using a Kenwood TS-570D transceiver and posted to his contest website. (Audio courtesy VK4DX)

**

THAT FINAL ITEM: ARDF CHAMPIONSHIPS IN ATLANTA

And finally this week, the calendar says that its spring and hams around the country are turning to outdoor activities such as new antennas and hidden transmitter hunting. Here's your chance to prove you're the best at the latter activity, as Newsline's Joe Moell K0OV explains:

--

The biggest annual event in on-foot hidden transmitter hunting is early this year, so time is getting short if you want to take part.

The Second USA ARDF Championships will be April 19-21 at Franklin Roosevelt State Park near Pine Mountain, Georgia. That's about 70 miles southwest of the Atlanta airport. No matter what your level of skill or experience at radio-orienteering, you'll be welcome. Experts will be vying for positions on Team USA as it travels to Slovakia for the World Championships later this year. Beginners will be picking up the best RDF techniques from these experts, and learning how to put on similar events in their home towns.

The official deadline to register for the national championships is April 6, but Georgia Orienteering Club urges you to let them know you're coming by March 29, so they can plan food for the picnic supper on Friday and the spaghetti dinner on Saturday.

Learn more about what it's like to be in the ARDF Championships by reading about last year's event in the March issue of QST, and in December and January's issues of 73 Magazine. There's lots more on the subject at my Web site -- www.homingin.com -- plus a link to the registration site for the Pine

Mountain events. That's homingin -- one word -- homingin.com

From sunny southern California, where we're soon having our third practice session of the year to get ready for the championships, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

Again, that website is www.homingin.com (K0OV)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

1136. Re: DXCC and Ducie QSL Card Question

Hi Murray,

Back when Ducie was suppose to initially activate, November 16, 2001,
I had sent an e-mail to Bill up at the DXCC desk and asked him the
same question. At the time, I was hoping to nail Ducie then get the
card and mail it in before the March 31, deadline.

I wanted to be sure of the answer and I checked the ARRL website and
here is the answer....especially the last sentence.

http://www.arrl.org/awards/dxcc/news/20011116.html

I wasted a lot of money on 3B8CF and FG. I'll bet I sent a dozen direct with IRCs, greenstamps etc. I sent them in official looking business envelopes. I sent them one QSO at a time, I sent them all on one card, I sent them every way I could think. I thought maybe someone would take pity after having worked me a dozen times. I never got a reply. I finally got a card from a vacationing ON.
Good luck!

|I could think. I thought maybe someone would take pity after having worked me a
|dozen times. I never got a reply. I finally got a card from a vacationing ON.

I received two cards from CF, one for 20 SSB and one for 15 CW. But they were
for QSOs in 1979 and 1981 respectively. Apparently times have changed.
Your experience sounds like mine with 5R. Worked six different stations and
sent about 10 cards. Finally, KD6WW came through. Even a well-known G-land
manager failed to deliver on two different stations, but maybe he never got the
logs.

That 40 meter net years ago was down around 7.155 to 7.160. One of the nights was a 0 land in MO.
Worked lots of DX on that net that I wouldnt have normally been able to get with the 100 watts.
40 meters is a very good DX band, but there doesnt seem to be much on, especially from Asia on SSB.
I dont know why the US cant operate SSB down lower. It might be a IARU rule and not anything with the FCC, I cant remember.
During the contests, Europe is very loud here but I know they have trouble hearing us because of the SW stations. If there were no SW on 40, it would really be a great DX band.
I would like to see another 40M DX net like years ago.

1143. Radio propagation at night

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-24 15:13:55 UTC
From: Nic Phillips <nicphillips@btinternet.com>
Message-ID: <a7kqfi$b5u$1@knossos.btinternet.com>

Hello,

Does anybody have any information on the change to the propagation of radio (100kHz - 2MHz) at night. I am particularly interested in how much further radio signals can travel at night due to changes in the ionosphere. I have information on the physics behind the ionosphere, but no real numbers for the distances involved.

Thanks in advance for any help or advice

Nic

1144. Re: Radio propagation at night

Nic the 160 meter ham band is 1.8-2.0 MHz and the 80Meter Band is 3.5-4.0 MHz.

Here are the basic propagation characteristics:

160 meters. Daytime conditions for this band suffer from extreme D-layer absorption, reducing the amount of signal to levels far below the noise floor of our receivers. This limits daytime coverage to essentially ground-wave coverage. At night, the D layer dissipates rapidly and worldwide 160-meter communication becomes possible via the F2-layer and in ducts in the electron density valley above the E region peak. Depending on the propagation mode, high or low elevation angles may be required. A limiting factor is the noise levels prevalent at these frequencies, both atmospheric and man-made as well as tropical and mid-latitude thunderstorms which cause high levels of static in the summer season. Winter conditions are much better, making winter evenings the best time to work 160-meter DX. Special antennas schemes, such as loops or beverages, can significantly reduce the amount of received noise while enhancing desired signals.

And one can hear AM broadcast from all over the USA at night, particularly in winter months.

For 80 Meters:
80 meters is similar to the 160-meter band. Here again, daytime absorption is significant and ground wave and some sky-wave propagation make communication ranges out to 250 miles possible. At night, signals can propagate halfway around the world. Like 160 meters, 80-meter atmospheric noise is a problem, making the winter season the most attractive for the DXer. Local sunrise is a good time to work DX on the lower bands. Predictions are quite complex ï¿½ but see ON4Uns book for a great treatment of low band Dxing.

Message-ID: <a7l0bfavj1@slb7.atl.mindspring.net>
Source record: 13821

to repeat part of an earlier post:
-- I also agree that it's bad operating practice to start calling on
--a frequency without checking it first. But it's pretty silly for someone
--to show up on the DX stations calling frequency complaining after
--the pile-ups been going for a couple of hours. It seems to me that
--after the pile-up is well underway, that the use of the DXers listening
--frequencies by the calling stations is pretty well established. Anyone
--starting up a QSO on those frequencies would be interfering with
--the current users.

I have heard recordings of the listening frequencies from a couple
of major DXpeditions and I can assure you that listening on 2 or even
4 single frequencies wouldn't work. After the few loud stations have been
worked, the remaining stations are all about the same strength. Add to that
the fact that there are a number of LIDS in every pileup that continue
to call no matter who the DX station comes back to and the result would
be a very low QSO rate.
As for working regions, and call areas, all you have to do is listen to
the
call frequency to hear how well the DXers follow instructions. True most
hams do follow the instructions of the DX station but enough LIDS ignore
them that it's a pretty common event for a DX station the QRT in disgust
over the poor operating.
Consider this. No one has Ducie Island confirmed. Therefore every ham
that has a interest in DX wants a contact with Ducie. Suppose there are
about 700,000 licensed hams in the US. Maybe 5% of these are active
DXers. That's 35,000 hams that all want to work Ducie Island. say 25%
of them are on the air on one Saturday afternoon. That's 8,700 hams
calling them and that's just from the USA. Under the circumstances, I
think they're doing a pretty good job with just 30khz.
I agree with you regarding identification. I've heard DX stations that
identify every exchange and I prefer that technique. I suppose the QSO
rate is a little higher if they don't take time to identify but it results
in
more QRM on the DX stations frequency as one LID after another
transmits over the DX station asking 'Who's the DX?'.

Let's use your numbers. Assume that 1 KHz spacing is enough to allow one signal to be separated enought to be identified from the next. That allows for thirty "channels." This has 290 stations calling per channel. Is this really an improvement and justification for spreading out over the band? Mind you, I'm not singling out this operation, this is a general observation.

I understand some broad spacing to begin with, but as the pile goes away, seems reasonable to narrow the listening frequency width as well. Seems that most dxpeditions will do this to the point that they can call simplex and keep up. 30 KHz wide can get pretty frustrating to the average guy and a better solution such as running call areas might work better, but then, I'm not there, so I don't know about the specific working conditions.

Fellows,

For what it's worth, I did check the pile
Saturday. Now it is down to a little more
reasonable 10 kHz spread.

Now that all the die-hard crazies have had
a shot, the rest of us can get in there. I worked
them on 15.

I was listening to one of the pilot stations
talking to the VP6DI operator here on 15
Sunday Afternoon about 2330 utc. The guy
in 2 land asked why the Pitcairn Islanders
were not more active, and the fellow on Ducie
said that some of them were pretty fed up
with radio by now...

Gee, I wonder why?

I don't think that the blame can be put exclusively on obnoxious lids. After all, if their tactics were always dealt with ruthlessly and decisively, they would never develop into obnoxious lids.
Unfortunately, it is not so, and today we have a bunch of crybaby dx shedding crocodile tears over the state of pile-ups while they reward breaking the rules and punish following them.

Example one: one of the current dx-peds is working a US pile-up by numbers, then accepts call after call of "portables" (give me a f'ing break). Working by numbers absolutely forbids accepting portable designations as the number worked, yet there it is - the rule is ignored and every obnoxious lid is rewarded for his anti-social behavior while the rest of the pile-up who followed the rules clearly learns that being an asshole pays off. So it's back to basics: nice guys finish last, dog eats dog, etc.

Example two: the bare minimum, absolute rule number one of any pile-up is to not accept any breakers. Yet, there it is, both current dx-peds have taken the calls of stations which called while the previous QSO was still in progress.

Example three: how closely have both dx-peds followed the rule about signing after every QSO (or at least every 10 min) and announcing the QSX frequency? If you expect the other end to follow rules, make sure you observe them, too.

The problem is, these examples are becoming more a rule than an exception. The moral of the story: the dx-peditions are getting what they deserve. If you train a group of children to be pick-pockets, don't expect them to become Buddhist monks.

73 ..... Zoran WA7AA

p.s. what kills me is that a majority of those instant "portable" dxers will gladly volunteer their story about working Ducie as "portable 7, he, he, he, 'cause he didn't hear me as portable 4, 5 and 6, he, he, he" without so much as blinking.

There is some question in my mind about the use of "portable".
For example, here I am in Oregon, with my zero call.
So I respond only as a zero ...
What happens when the DX asks for "any sixes or sevens"?
They are clearly looking for a west coast opening.
Happens more often with European stations than Pacific Islands :-)

So perhaps more clarity is needed, e.g.

"Looking for the 7th district"
vs.
"Looking for calls with a 7 in them".

--

... Hank - A zero in MN / MA / CA / OR (no snide remarks).

|log so far, so I guess I will wait. I worked them too, or thought I
|did?

I *know* because I knew who I was calling, because I listened long enough to determine this, and I had them acknowledge my call and give me a report after which I gave them a report and they sent "thanks" or "TU".

I don't need a friggin online log to check to determine this and I don't need a damn cluster to figure out the call sign. And if you do, and you only "think" you worked them, then in my mind you didn't work them, whether you eventually show up in the log or not.

As Walt said, your way makes it a lot easier to cheat.

We actually worked DX and got confirmations before there were dxclusters and the Internet. I know it's hard to believe but it's true. We even used radios with tubes in them, no memories, no split, no computer interface, no computer-sent CW, paper log books, etc. Practically the dark ages but I confirmed over 250 countries that way.

|
|I don't think that the blame can be put exclusively on obnoxious lids. After
|all, if their tactics were always dealt with ruthlessly and decisively, they
|would never develop into obnoxious lids.

Absolutely. If I guy calls out of turn, tail ends, or screws up any other way, he should be acknowledged with the following: "AB7SL, I was calling for EU fours. You're in the log, but you won't be getting a QSL, electronic or otherwise." (I just made up that call and any resemblance to persons living or dead is purely coincidental.)

|Unfortunately, it is not so, and today we have a bunch of crybaby dx shedding
|crocodile tears over the state of pile-ups while they reward breaking the rules
|and punish following them.
|
|Example one: one of the current dx-peds is working a US pile-up by numbers,
|then accepts call after call of "portables" (give me a f'ing break). Working by
|numbers absolutely forbids accepting portable designations as the number
|worked, yet there it is - the rule is ignored and every obnoxious lid is
|rewarded for his anti-social behavior while the rest of the pile-up who
|followed the rules clearly learns that being an asshole pays off. So it's back
|to basics: nice guys finish last, dog eats dog, etc.

Yep. "Calling for sevens" should mean there is a seven after the first letter of your call. If you have two letters in front of the numeral, then you shouldn't be calling at all. (Sorry, Zoran but this really cleans up the pileup <G>)
|
|Example two: the bare minimum, absolute rule number one of any pile-up is to
|not accept any breakers. Yet, there it is, both current dx-peds have taken the
|calls of stations which called while the previous QSO was still in progress.

Tailending is up to the discretion of the DX station. Some don't care. If they do, then it should be remedy No. 1 above.
|
|Example three: how closely have both dx-peds followed the rule about signing
|after every QSO (or at least every 10 min) and announcing the QSX frequency? If
|you expect the other end to follow rules, make sure you observe them, too.

Some of the "less experienced" VP6 ops, to their credit, have actually signed after each QSO. It actually can take no more time to do this if the op does it every time. He can just as well say "VP6DI" as "QRZ?" or "TU". Once everyone gets used to the rhythm then things should go smoothly.

Again, my comments are general and are not singling out any expedition, current or otherwise.

I worked them simplex at ~ 0300Z on 15M this evening. They had been off for some time and they came back on starting simplex. I got them w/5W on my second call - much more fun than the hours I spent previously fighting a 20Khz wide pileup :-).

Uhm, I have always thought of a tailending QSO as something rare and
something special. I worked Roger, G3SXW, on his last trip to ZL7, listening
to an OK1 station up 3 or so, whose callsign he clearly had already on the
first call. Yet the OK1 still repeated his call, so I gave my call once and
got "OK1XYZ tu nw DF5JT 5nn".

What's wrong with that? I remember Martti giving something like that as a
perfect example of a great operating skills on both sides.

You either *know* you worked them or you didn't. Anything in between is
not a valid QSO. If you ar3e not sure, work them again. Worst case: You are
in the log already and the DX will either tell you or log you a second time.

To sit by the computer and do all kind of Internet log searches is
ridiculous at best.

I have worked HK5QGZ/0M and yet my call is not in the online log, despite
the fact that 2 other friends heard my QSO as well. Since I don't bother
collecting QSLs, it's enough for me to know I *did* work them, no matter
what the fscking online log says.

Unfortunately, the problem with this is that it stands a fair chance of
generating a jammer...

>Tailending is up to the discretion of the DX station. Some don't care. If they
>do, then it should be remedy No. 1 above.

Tailending is beautiful when done properly. It's awfully difficult to do it
properly when you can't hear the station the DX is working. Which is
unfortunately awfully common these days, because most of the pileup doesn't
stop calling when the DX comes back to someone.

Probably worse, even though most people don't know how to tailend properly,
if the DX comes back to one, everybody will try it.

Personally, I believe tailending is a thing of the past..

Indeed, the rhythm is essentially the same. It works great.

I figured I better start another thread before the VP6 guys started thinking I was picking on them. (I wasn't)

I think it would help if the DX op says; "Well, guys you've pissed me off with your lack of discipline. It's a nice warm day, I think I'll head down to the beach and take a swim and a long walk to unwind. That will probably make me hungry so I'll head over to cook tent for a snack. By then, I'll probably need a nap. After that the lighting should be better for some photography. I can get some good shots for the video. I should be back after the band closes..."

No kidding. I worked them on 15 CW on Thursday night. Probably my first ever CW pileup success, but when he came back to my call, I was so nervous I screwed up my own call on the return. By the time I got it out right, I couldn't tell if he was still listening. I'll only know when I see it in the online logs. With luck, he recorded the first call he heard.

Hi there,
It may not be prudent to treat the cluster postings as gospel.
I have seen some fake entries and some entries with the
wrong calls. So again, it boils down to the basics of good listening habits and
some patience.

Btw: I was able to work VP6DI on 15M around 11:30 pm EST. I hope i can
on 20/10M. May be not this time.

Are you referring to his call "R3A-88"? If so, that's an SWL call
registered by some authority in Russia. Many countries issue SWL callsigns
on some semi-formal basis, particularly in Europe. I'm not sure what
agencies are responsible for issuing such calls. Years ago (in the 60s),
Popular Electronics magazine issued SWL callsigns for US SWL/DXers.
These SWL calls are not listed in qrz.com or other callbooks, as they
aren't really ham radio callsigns (although the current RSGB yearbook does
has a small section on British SWL calls/addresses). You can certainly send
a card back to him direct. The buro is also able to forward these SWL cards
to the appropriate national buros. I receive a fair number of SWL cards via
the buro and reply back the same way.

Source record: 13847

Greetings,

No sour grapes here. Just thought I'd report back
to the group. Despite using 2 diff. rigs, and 2 antennas
and ocassional tries with 600W amp.-- No luck with Ducie.
Based on the bandscope on my IC-756, I don't think I ever
had a prayer. A couple times they seem to come back with
very close to my suffix, but always a Big Gun would snag it.
I did spend 18+ hours over 6 days trying. Que sera, sera.

I also got pretty fed up with the DX-Cops and people
goofing around. I almost made the mistake of letting my kids
" hear what a pile-up sounds like." Once I heard the "shits",
"assholes". and even "motherfuckers" coming through I'm
glad I didn't. Also lots of deliberate QRM from recorded TV
shows, etc. Really assinine. But,...guess that's part of the game.
Worst radio behavior of my short Ham-Career.

On the bright side. did manage some DX including these:
XR0X (in the log)
JW8G
UX9AA
I suspect Fedor is a frequent presense and JW8G seems to make
quasi-regular appearences. Still, feel these are legit DX. Too bad
about Ducie, they'll be another time. I did find reading this ng a help.

Hello Andrew,
Sometimes it can be a real challenge using a wire antenna. But when one does get through with "just a piece of wire " to me at least, it is all the more rewarding. Here are my current log entries (also on my website) for Ducie Island. These were with a W9INN wire dipole antenna at about 54ft and 600-800 watts depending on the band and all were SSB contacts..so it can be done "with just a piece of wire"

03-18-02 19:24 VP6DI Jim 15 Ducie Island
03-21-02 03:45 VP6DI Jim 17 Ducie Island
03-24-02 16:34 VP6DI Kan 10 Ducie Island

BTW the official W9INN Antennas Page is also on my site.....

This will only infuriate the offending stations, and you'll have some on the
spot jammers. A better way would be to work "AB7SL". After the
DXpedition, list the LIDs on the DXpedition web with a blanket statement
that "You're in the log, but you won't be getting a QSL....".

You can also point to the Macquarie operation which seemed to challenge the infidels. Remember the penguinizer? What fun! He caught heck for that, but nobody screwed with him or tried to jam--for long that is.

> "Looking for calls with a 7 in them".

When the dx is calling by numbers in order to thin down the pile-up, then you should only call when your number in the callsign (in your case: zero) matches what he is looking for: zero. This is usually the case with the most wanted countries dx-peds and it is fairly easy to distinguish the situation from the other one.

If you're disadvantaged because you decided to keep your W4 call after moving to California - tough luck, it was your choice. Same goes for those QRP-ers who believe running 5W gives them a license to step on other folks' QSOs because they need preferential treatment in pile-ups. Or mobiles. Or crappy antenna owners like myself.

The other situation is when the dx is specifically looking for a certain area, which in the US West Coast case, for example, translates into 6 and/or 7. Then you call and let him know that you're in Oregon. I never heard a major dx-ped call by geographical areas because it doesn't make sense (except by continent).

Calling the dx out of turn with phony baloney portable designations in order to jump the queue is in poor taste at best and rewards anti-social behavior.

Btw, I wasn't referring to tailending in my previous post, but to the blatant stepping on another person calling practice. Tailending does not permit keying the mike or key while the other guy is still *in QSO*. But, what else is new...

No. But let me rephrase that: it counts as USA for DXCC because that's where it's stationed. The only two DXCC recognized 4U callsigns are 4U1UN and 4U1ITU. Other 4U's are valid for the DXCC from which they operate (upon submitting the proper documentation, of course).

Hi Mark,

I'm a 6m repeater keeper, GB3WX, in the UK.

We have tried various "White-stick" antennas, as we call them, and although quoting significant gains, the polar diagrams left much to be desired, in terms of lobes and angle to the horizontal. Gain is not everything.

What about the Cushcraft AR6 or ARX6

The AR6 is just a halfwave base fed, and the ARX6 is 2 x halfwave, although I'm a bit concerned about the quoted gain. My perceptions is that it's just a pair of "close-spaced" halfwaves in phase, and therefore the max gain will be about 1.9 dBD at best.

We have been using an AR6, for over a year now, it has withstood gales with gusts to 80+ mph and everyone in the group indicated that they were getting a stronger signal from the repeater, when we replaced the original "white-stick" with the simple half wave.

Hopefully, this will be of some use to you.

Cheers
Dave, G3ZXX.

Of course, that works both ways - when the Pratas Island station says
"W1-2-3-4 only" you get to be a REALLY LOUD W4<grin>.

Unfortunately, Hank is a W0 so he gets the worst of both worlds - not east
enough to be East Coast, not west enough to be West Coast. I guess that's
why they call it the "black hole"<g>.

>Same goes for those QRP-ers who believe running 5W gives them a license to
>step on other folks' QSOs because they need preferential treatment in

QRPers seem, in general, to be pessimists. They believe their signal is
worse than it actually is. In contests they are far more likely to repeat
themselves without being asked. And it's the ones who don't *need* to
repeat - who are just as loud as the average 100-watter - who are most
likely to be repeating.

Anyway, really that's a choice issue too. Most QRP stations are because
they want to be. To then claim the right to call out of turn is really
rather absurd.

Unfortunately, other people will see his apparent success and emulate him. Instead, you have to escalate the warnings stepwise so that only the most obnoxious stations get the direct slam.

level 1: DX could "gently" point out to everyone that out-of-turn callers will be ignored. I heard one of the VP6DI ops do this, and it worked (at least for a while).

Level 1: speak directly to the offender, "XX9XXX,I will not work breakers." then follow through and ignore them.

Level 3, if necessary, could be saying "XX9XXX, you are consistently interrupting ongoing QSOs. I suggest you wait until I forget your call before you try me again." The caller still has a chance of working you, but only if they shut up for at least a minute or two. They realize, too, that if they persist, you won't "forget their call" as quickly.

Level 4 then is the direct message that they will never get a QSO from you in a million years, and a jammer is born.

This advice from one who has never been on a DXpedition, never been rare DX, never even worked outside the US and in fact has only 5 years of HF under his belt!

I agree. I was upset by the verbal sparring when a 6Y station was a couple kc under the VP6DI transmit freq, and (a) he refused to move down, (b) the DX didn't move up (did he even know?), (c) indignant hams started to QRM the 6Y, who (d) probably responded by prolonging his QSO, and (e) people also started tuning up on the DX freq, and (e) etc etc etc. One well-meaning but very indignant guy came on the 6Y's freq, just fuming about how 14195 is a well-known DX freq, and they shouldn't be using it. Completely missing the point that hams all need to accommodate each other. At least he wasn't cursing like so many others. Courteous hams were the exception by that point. I was appalled.

Will the person who e-mailed my provider that I was guilty of net abuse
- please e-mail me direct?
Hope we can discuss the matter civilly as I have no idea why I was so
cited. Just a form letter from them with no specifics?
The provider (now ex-provider) threatened to cut me off the news groups
and I have no idea why. It is a sad policy
that allows anyone to report anon net abuse whether true or not -- and I
so informed them as I canceled with them.

Golly for the last 4 years I've answered hundreds of questions here as
DX and Amateur Radio are a love of mine.
My web pages have dozens of FREE lists, resources, etc, hopefully for
the good of Ham Radio.
So I am at a loss to understand the problem.

Just a note to posters - when you use your real identity -- this can
happen to you when you tick someone off.
Now I understand why so many have false addresses or aliases which are
untraceable. I now have a new server with double aliases.

The AR-6 is a well-built, sturdy antenna. The problem
in using it for a repeater is that it has uptilt rather than
downtilt.

OOppps -- 4U1WB counts as W3 -- USA.
4U1ITU and 4U1UN count as DXCC entities
4U1VIC Vienna Intl. which I understand counts as OE - Austria.

So 4U1WB, 4U1VIC do count as DXCC countries (USA and Austria)

Another * one is 4YA-4YZ International Civil Aviation Organization which

is not a DXCC entity.

Rod,

Crap *is* a part of life, isn't it? (Big Sigh).

Your posts here, as well as e-mails are very, very valuable to me.
Of course, no one's gonna accuse you of something you don't care about
like spiking the coffee at the 7-11. Nope. Instead they always seem to know
what hurts the most.

I once had someone smear my character at work in a way that
went all the way to the top. Fortunately for me, this nut-case cited co-workers
as "witnesses". These people trashed everything the person said and supported
none. The individual was a real looney. Eventually they were pushed aside for
their lies and quickly left the job. Still, it was creepy how easily some very
determined jerk or nut can really screw with you. Hope you keep on doing what
you do best.

Peace,

Andrew

Hi, Rod -

Indeed your web site is greatly appreciated. I refer to it literally every day.

You mention a form letter - was that from your ISP? and gave no specifics? If so, I strongly encourage you to contact them for specifics. Some anti-spam tools can be abused by spammers to "get even" with people with whom they have a disagreement. It's known as a "joe-job" in the trade. Your best defense is to get the details and address them point by point.

Was the form letter from a standard anti-spam service like abuse.net or spamcop.net? Again, it could be a joe-job, but these generally provide more detail about the incident, plus have ways to punish false accusations. If this was a joe-job, they'll figure it out. Even if it was just a misunder-standing, these services will generally take you off their list within a week if there are no subsequent complaints.

One point you might consider - an ISP who takes abuse complaints seriously might in fact be the ISP with which you WANT to be associated. I know of some who are known to turn a blink eye to spammers, and I would never give them my business. They'll get listed on a Blackhole List or be the subject of other anti-abuse measures.

Good luck, and I'd be glad to help in any way I can (which isn't much, in all probability).

Bob, KI8AB

Another good thing about the AR-6 is it's quite adjustable for the
freq used.
They also make a 10m version. "AR-10". These are easily homebrewed
also. I've made a few of them for 10m. I use a single turn loop at the
base the same way cushcraft does. The cap made from coax. You can also
improve the low angle performance a bit by adding a decoupling section
below the antenna to reduce the feedline radiation. I used a 1/4 wave
section of coax below the feed to a set of 1/4 wave radials mounted
and grounded to the mast a 1/4 wave below the feedpoint. I tried this
on a 10m version and it did seem to clean it up a tad. But they work
fairly well out of the box with no decoupling. MK

Hang in there, Andrew!

I am what you might call a "Poor-Man DXer". The rig here is a $550 FT840 and the antenna farm consists of 2 wire antennas: a 40m dipole (up 65') fed with ladder line that I use on 10-40 meters, and an 80m inverted V (apex at 55'). This is the fanciest gear ever seen at my QTH! After getting DXCC and growing bored with the high bands, I set my sights on 40 and 80m. In 2 seasons of mostly-casual lowband DXing, I am 11 countries (on 80m) away from 5B-DXCC. All 489 band/countries were worked with dipoles and 100 watts max. Some (even on 40m were worked with 2 watts). But that's another story (see website).

I say this only to let you know what is possible with a modest set-up, ie dipoles. Too often we read about antennas that theoretically won't work for DX on the__meter band. My inverted V, with its ends down at 8 feet should not be good for anything other than local stuff, but the QSLs on the wall tell another story.

Like you, I got fed up with the pile-ups but did manage Ducie on 15m. But the biggest difficulty for me was the size of the freq spread. I spent a lot of time (a LOT!) trying to find where they were listening so that I could call them. Easy to do when a station is listening up5, but when they are anywhere between 5 and 35 khz away...man, that's tough!

Lots of DX can be worked with 100 watts and wire antennas.
Sometimes DX is a lot of luck and being at the right frequency at the right time.
I worked Ducie on 10, 15, 20 and 40 SSB with 100 watts. 10 meters was a 2 element homebrew delta loop and the other bands were a 20 meter EDZ wire. I didnt have to call that much it seems last week. 10 meters was the hardest to work them.
As far as DX and wire antennas and 100 watts, I only need about 30 more on 80m for 5band DXCC. But is hasnt happened over night. That is in about 15 years. It took me 15 years to work an A7, and now it seems I could work him any evening. 325 countries and I still can't get a YI.
As far as Ducie goes, the split was wide, no spotting really. Just try to find a clear freq and call and hope he hears you. 10 meters was never very strong like I thought they would be. 15 was the best band for SSB to work them.

It seemed to me that many people were just waiting around on 20meters to work them when they could have been on 15 meters working them.

I did not report you or anybody else.

Don't over-react to this, though. Somebody "turned you in."
Who knows why and who cares, really. The world is full of all
kinds and some people seem to just enjoy making others miserable.

Now, most providers have an AUP (acceptable use policy) as you know.
Some have some relatively arbitrary criteria for defining abuse in
a consistent way. Like posting a "largely similar" message to more
than N newsgroups.

Obviously, the number N is not magical and "largely similar" or whatever
is a matter of judgement.

If somebody complained to your ISP, and if your ISP has an AUP with
some abuse criteria defined, and if you fell within those criteria
(by some interpretation), then they are sorta obliged to take action.
I would think it would be a warning message. No biggie.

Unfortunately, those few who pollute the internet make it necessary
for some criteria to be established and we all have to live by it.

Fair or not.

I'm sorry you were a target. Don't let it bother you.

No matter what you do, in the world at large somebody will hate you.
It isn't right, but it is a reality.

Brian

Actually, it's not causing any problem, even though I'm not running
much power (100W) and have only a small antenna (3 el tribander).
The location makes up quite a few db it seems.
Didn't have any trouble working VP6DI or XR0X.

The key was listening and listening some more until I understood
exactly how the operator was operating ... and then calling them
exactly where they would hear me. i.e. 30 minutes just listening,
the a few minutes calling.

Did get rather bored waiting for one or another of the "Now I want nines"
"Now I want the west coast" folks though ... had a bit of trouble convincing
one of them that I actually was in Oregon :-)

Yup ... in 1958 I worked a whole lot of DX on 10M running 10W.
As long as I didn't tell anyone ... they didn't know ... and I could
always fire up the KW when the 10W didn't quite work :-)

Has been fun getting back into the DXing game after being out of
it for 20 years. Some things change (the internet, DX Cluster),
some things don't (LIDS and the occasional really good op).

No wories. Just curious. I happened to dig up an old logbook
from 2000 with a QSO with "Masa" of 4U1WB and sent off a
card on the chance the QSL manager might still have a record.
Happy for the card even if it's not a DXCC Entitiy.

Howdy,

Just curious, but it sems that about 80% of the time I work
anyone within the old USSR that they never zero beat to a
whole number freq.in KHz. It's always off and usually up a little,
like 14.280.25 instead of 14.280 -- as an example. I don't mind
as I hear others calling on the whole number and they don't get
thru as quick as I do. they sound distorted and sometimes I hear
the DX straining as well. So maybe not my rig (IC-756). Anyone
else notice this or have info on same??

I *THINK* that many Russians still have old equipment, converted army stuff and homebrewed rigs. At least, they tell me when exchanging station info. This means they sometimes not have the stable, PLL synthesized oscillators and high resolution frequency read out modern commercial rigs have. This results in either less accurate frequency display (they see a whole number but your more precise rig tells you he's a few Hertz up or down), or drifting VFO's.
Try that in CW with narrow filter: sometimes I spend more time trying to stay zero beat than I send dits and dahs. Sometimes the drift makes you shift that much up or down that you end up in an adjacent ongoing QSO.
Nevertheless: they get on the air, have fun and compete with the rest of the world. And they still know what happens inside a transceiver and behind the buttons!

Hope this answers your question?

I did not realise the HF bands were channelized!

I must say I have been around since long, long before synthesised
VFOs, so it has never even occurred to me to select a whole number of
kHz. I just look for a nice clear frequency ... and if it happens to
be 7030.4861 kHz, then so be it!

> Andrew

Of a few reasons for this might be that certain rigs don't have the micro-dial resolution that leads to 14.28025 'accuracy' displays! They only go to 14.280 in one digit jumps at that! This isn't a put down to you either as said, but you have to put things in perspective. Your wonderful rig that will read 14.28025 on that dial is in a place where you could afford to acquire it, cherish it and love it.

We can corrupt Browning to have some fun! "How do I love you? Let me count the digits!"

Now, consider that even a nearly $2.00 USD IRC coupon to get that QSL back from Podunk .. may even represent as much as about 5% of a whole week's wages at current rates in a lot of places where Podunk exists. Having a rig that even reads 14.280 precisely in Podunk may take a King's ransom to acquire there as well! Love 'dem digits, right?

Now, add to the possibilies, that your standardizing frequency oscillator may actually be off a tad and what YOU think should be 14.280 .. as .. grin .. is actually 14.28025! Thus it could be YOUR calibration inaccuracy; not theirs! Probably not, since WWV always comes out to within one hertz of the right audio tone at the 400 hertz mark when your dial calibration says 10.00000, but then maybe not? What's a few hertz here or there in what you hear as 400 hertz, anyway, grin! Maybe the real answer is 10.00004, or even 9.99997! But then, think this out. If your end is four out one way and his end is six out the other, who shows a dial readout of 14.28010 and why?

This is the watchbird watching ducks chatter. This is the watchbird watching a ham radio SSB QSO. Are you a duck with perfect pitch? Quack?

Grin.

It gets worse on CW!

On CW many people simply tune in a signal that sounds good to them! That's especially true of older equipment with not-quite-so-narrow filters! If this is a transceiver and the transmit frequency is keyed to the receiver frequency; surprise! What the manufacturer thinks should be the 'correct' tone for the audio out isn't used. Result? transmitted frequency doesn't exactly match the heard frequency!

However .. in chasing DX, there's more than one way to hobble an elephant! A station that is not using "split" techniques, but getting everyone to call around their frequency, produces a whole tiny "split" this way as well. If you have very narrow filtering, you can wiggle just a little bit with the receive clarifier - yet still pick out callers. Arm-chair DX'ing at it's finest! Use very narrow filtering on those chasing you and just wiggle that receive clarifier a tad. It's still pandemonium; just all on the chased one's own frequency.

Actually, in a curious way, this is even good for us all!

Reason? Just think about the much bigger mess we would all have if all the slamma jamma deliberately key down tuner ditter yapper whatevers ...

were always exactly zero beat with their targets?

You wouldn't ever be able to know the difference between a 4Q and the even lower province of 4Q2, if an expedition ever went there!

Chuckle.

--> Sleep well; OS/2's still awake! ;)

First of all there is no requirement to be on "whole number" frequencies. If there was, imagine how much wasted space there would be in the cw bands.

To their credit, a lot of former Soviet bloc hams still build their own equipment. They don't have synthesizers with 10 Hz resolution (note I said resolution, not precision, if the master oscillator is off so is everything else.)

Added to this is the fact their their voices and dialect sometimes makes tuning them a little different and also, at least where I live, the paths are usually polar which adds some addition distortion, making "zero beat" a little more uncertain.

Nevertheless, zero beat them as best as you can and enjoy the QSO. And if you're getting through better than the guys that don't zero beat, then good for you.

Andrew --

Probably the reason is pretty simple -- they don't care !! I'm not
sure why anyone should for that matter. If the frequency is clear,
use it !!

> It's always off and usually up a little,
> like 14.280.25 instead of 14.280 --

An assumption you're making is that all people own radios that will
display the hundredth and tenth of a Khz. While this is probably
more true than not in the United States, it may not be in Russia.
I like to work Ivan a lot, and when they tell me their equipment,
it's generally older commercial gear or HB stuff. While this is
changing as time progresses, I very seriously doubt they most
of them own the latest state of the art stuff for economic
reasons. Maybe I'll get corrected on this, since I don't have any
hard data to back it up except my on the air notes.

My most "modern" radio in my shack is my TS-830 and that only
gives me hundredths of a Khz. That radio is on the floor for backup.
All my other radios that I used for DXing have analog tic
marks every 5 to 25 Khz depending upon the band. I have no trouble
working DX with them.

> as an example. I don't mind

The XF4IH DXpedition was announced in a recent ARRL DX newsletter as being from "Mexico XE", but states that they are operating from Cacaluta Island, IOTA NA-188. I am confused as to why they would have been issued an XF4 (Revilla Gigedo) call if they are actually only an XE prefix - or does this QSO count as something else? On the cluster yesterday someone was claiming the prefix to be a XF3.

So... what are they really?

One trick I sometimes use in a pileup is tuning slightly above the listening freq by a hundred hertz or so. This raises my audio freq in the DX's ears, making me stand out from the crowd a bit. Of course I have to make sure I'm still completely intelligible. I would accomplish the same thing with some high-pass filtering or DSP processing on my audio input, but I don't have that capability with my old TS-520.

Perhaps the stations you've noticed are trying something similar?

Hi Larry -- there is a web page at URL:
http://www.qsl.net/xe2ml/cacaluta/page2.html
Which shows: XF4IH Cacaluta Island IOTA NA-188, and states it counts for IOTA
but not DXCC. Except Mexico I assume.
Cacaluta is located at 15ï¿½43.3'N 96ï¿½09.4'W so I think it is on the Pacific
side.
Supposedly XF1 are Pacific Islands
XF2 Caribbean islands-west of 90ï¿½W
XF3 Caribbean islands-east of 90ï¿½W
XF0 Revilla Gigedo
XF4 Revilla Gigedo

So I don't know why the XF4 prefix

Greetings,

I've got in my logbook T9ZV, "Vlad", worked 03-27-02 at 00:33 on 14.247.
Could be a typo, but I can't find him anywhere. Anyone with any leads/QSL routes
on this person ? I could use the card.

TIA,

Andrew

Searching the spots on DX Summit for T9 (and deleted irrelevent ones) gave:

LU7DR 28440.0 T97V 1648 24 Mar 2002
KP3AH 28440.0 T97V SOLID 59+++ T91650 24 Mar 2002
LU7DR 28512.0 T97V cq cq cq T91605 26 Mar 2002
KK9T 14246.9 T97V 0008 27 Mar 2002
KG4JBM 14247.0 T9ZV VLAD T90054 27 Mar 2002
W4PJW 14247.0 T97V T90101 27 Mar 2002
N6YEU 14247.0 T97V Vlado T90134 27 Mar 2002

You are not the only one who logged T9ZV, but most other people got it as
T97V, which is in QRZ as:

VLADICA BABIC
P.O.BOX:16
87000 VITEZ HRHB
BOSNIA-HERCEGOVINA

Good luck getting your card!

Bob, KI8AB

I think you may have heard the call wrong....here is who you probably worked according to the spot archive at DX Summit....

KK9T 14246.9 T97V 0008 27 Mar 2002
KG4JBM 14247.0 T9ZV VLAD T90054 27 Mar 2002
W4PJW 14247.0 T97V T90101 27 Mar 2002
N6YEU 14247.0 T97V Vlado T90134 27 Mar 2002

If it was T97V here is the direct qsl route for him...

T97V Lookups: 2591
VLADICA BABIC
P.O.BOX:16
87000 VITEZ HRHB
BOSNIA-HERCEGOVINA

Theoretically it -could- have been T9ZV according to the ITU prefix designation list (from my web site)
T9A-T9Z Bosnia and Herzegovina (Republic of)

However here are the only recorded T9Z spots so far in 2002 from DX Summit spots archive..

W8WEJ 24900.0 T9ZM loud in wv 1409 29 Jan 2002
W3GH 24893.7 T9ZM T91220 06 Feb 2002
KG4JBM 14247.0 T9ZV VLAD T90054 27 Mar 2002

Odds are you worked T97V..also T9ZV does not show up in nay call book I could find.... 73 / DX

1254. Random, Mostly Trivia, DXCC Questions (Long)

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-28 22:48:49 UTC
From: Cathexis@yourhaterols.com
Message-ID: <3ca39427.948439302@news.erols.com>
Source record: 13980

I can't always be on the radio, alas, but usually work and the family will alllow some break where I can read about radio at least. In reading over the official ARRL DXCC List some random questions, brain farts, whatever come to mind. I'd like to throw them out here in hopes some might want to try their hand at answering/commenting on any or all. If you think you detect anything remotely like flame-bait, trolling, or evil assumptions please re-read 'cause they ain't in there. Promise.

1. Entitiy 1A0 -- What is the "Sov. Mil. Order of Malta", is it still active, and when was the last time it was on-air ? (I assume its Sov-ereign, not Sov-iet).

2. Entitiies 3Y and JX - (something about remote fridgid islands appeals to me) When was the last time they were activatred ? Possibilities in near future? I was thrilled to work JW earlier this week.

3. XR0X -- Happy I made it thru last week. But didn't this used to be CE0 ? Why the change?

4. I haven't heard too much coming from AF other than D4. Is a low activity common in this area ? Any tips on hunting AF entities other than camping out on the DX-Cluster,etc. ??

5. As above, but regarding OC.(Kiwis and Aussies aside). But here I wonder if little Pitcairn with its active Ham-population isn't the exception rather than the rule. That is, that many of the entities are remote islands that are only activated when some DX-ped. comes along to do so. (No disrespect guys, just asking).

6. *Other than P5*, are there other entities out there that are downright hostile to ANY operations in their countries?

7. Blemheim Reef - Was it real ? A scam? Washed away? Wasn't there a big scandal about this?

8. Are there any known Con-artists out there that are known to routinely ask for cash for QSL'ing and then pocket the money without QSL'ing.? Anyone know of any notorius cases of the past?

9. Can you personally think of any candidates for new-entitiy status that are out there right now ? (Must be according to published rules). If not,.....

10. Is DXCC in danger of becoming a "Dead" list ? One that forever hovers around 335/6 Entitiies as UN missions come and go, but never really grows. Or do you feel that as more and more Hams see the avg. totals rise, that pressure will be put to change the rules and slice the pie into ever smaller slices in order to provide that challenging "new one" every few years ??

Hope if you've read this far you've decided to toss an answer or two back.
Please accept my thanks in advance.

Andrew / KG4JBM

Hello Reticulum,
Here is the link to get to the DX Summit 'spots archive'

http://oh2w.kolumbus.com/dxs/qin.html

Here is the link for the DX-Central 'spots archive'

http://www.dx-central.com/ssarchive.cfm

These archives are extremely useful and in the case of the DX Summit
spots archives goes back a full 5 years....

To see when that new one for you comes on the air --- try this (in example form)
Say your looking Kuwait --- go to http://oh2aq.kolumbus.com/dxs/oldlook.html?
Select "The Spot Database Search"
Type in 9k AND 100 SPOTS
From this you can see when Bob 9K2ZZ comes on the air -- be tuned up to go

>
>
> 1. Entitiy 1A0 -- What is the "Sov. Mil. Order of Malta", is it still active,
> and when was the last time it was on-air ? (I assume its Sov-ereign, not
> Sov-iet).

THE SOVEREIGN MILITARY ORDER OF MALTA is still a DXCC entity -- see URL:
http://www.arrl.org/awards/dxcc/dxcclist.txt
For what and where -- see URL:
http://www.kwtelecom.com/heraldry/stjohn/sovord.html

> 2. Entitiies 3Y and JX - (something about remote fridgid islands appeals to me)
> When was the last time they were activatred ? Possibilities in near future?
> I was thrilled to work JW earlier this week.

3Y* Bouvet has had operations 16 December 2000 with the callsign 3Y0C
and remained on the air until March 2001.
what and where http://www.cia.gov/cia/publications/factbook/geos/bv.html and
And http://www.qsl.net/zr1dq/3y0c.htm

3Y* Peter I I. had operations ---- 3Y0PI DXpedition to Peter 1st Island in
1994. Very difficult to get to and get permission from what I've heard.
See URL: http://ocean.st.usm.edu/~gejones/3Y0PI.html

>
>
> 3. XR0X -- Happy I made it thru last week. But didn't this used to be CE0 ?

> Why the change?

NO change --- Countries have commonly used prefixes and secondary, and tertiary ones. The secondary/tertiary ones are typically used only for DXpeditions or sometimes contests. Since CAA-CEZ, 3G, XQ, XR all belong to Chile -- they can grant permission for any of these prefixes as the spirit moves them or their FCC goofs up -- hi hi. Maybe the first FCC top dog would issue only CE0, his predecessor -- issued XR --- who knows.

>
> 4. I haven't heard too much coming from AF other than D4. Is a low activity
> common in this area ? Any tips on hunting AF entities other than camping out
> on the DX-Cluster,etc. ??

Here in San Diego on 10M --- Africa comes in --- in the morning a little after Europe -- listen then.
9K2ZZ has been on 20M around 0000Z for many, many nights. He is in Kuwait
On the packet cluster Do a sh/dx/21 9k (replace 9k with the AF prefix desired)
Likewise for other AF and see when they are on the air.
Check the ham populations at URL:
http://www.buck.com/divisions_by_location.html
and you can see why Africa is not heard all that often.
A station in Armenia came on 20M almost every night at the same time --- guess who was all tuned up and called him right on time?

>
>
> 5. As above, but regarding OC.(Kiwis and Aussies aside). But here I wonder if
> little Pitcairn with its active Ham-population isn't the exception rather than
> the rule. That is, that many of the entities are remote islands that are only
> activated when some DX-ped. comes along to do so. (No disrespect guys, just
> asking).

Again see Ham Populations - there are more hams in San Diego than Pitcarin -- hi hi. And yes many are uninhabited making the troops wait until a DXpedition gets there. And some Islands are virtually verboten -- political issues, environmental issues etc so never on -- it seems. KP5 Desecheo Island is in that category.

>
>
> 6. *Other than P5*, are there other entities out there that are downright
> hostile to ANY operations in their countries?

Many -- guess which ones or e-mail me for my list.

>
>
> 7. Blemheim Reef - Was it real ? A scam? Washed away? Wasn't there a big
> scandal about this?

Many reefs around the world -- some sink at high tide, some have sunk forever. Blenheim reef is real and still there when not under water ---- see URL:

http://members.tripod.com/~dc3mf/Blenheim.htm

>
>
> 8. Are there any known Con-artists out there that are known to routinely ask
> for cash for QSL'ing and then pocket the money without QSL'ing.? Anyone

1258. QSL CARDS FOR DUCIE IS DXPEDITION QUESTION

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-29 01:51:27 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3CA3C89F.7582041C@erols.com>
Source record: 13984

It has been a long time since I exchanged QSL cards with Canada.
As I vaguely recall, (1) it may take more than 34 cents to get there?
and (2) do not put a US stamp on the return envelope that is to contain
the QSL card coming back to the US since it requires Canadian stamps?

Maybe someone out there can refresh my memory banks.
Thanks.
73, Murray, K3BEQ

Yes, there is a rate for Canada higher than the domestic but still lower
than other international. Ask in your post office - those postal people
keep raising rates faster than anyone can memorize them.

> and (2) do not put a US stamp on the return envelope that is to contain
> the QSL card coming back to the US since it requires Canadian stamps?

?????? Why would you assume anything different at all? Canada *is* still
independent from the US the last time I checked...

Canadian postage to the US has gone up. Right now it costs $.60 US to
send the mail to Canada, and $.65 Canadian postage for the mail coming
back.

And an additional contribution to the DXpedition is always
appreciated...:-)

Looking for any info an ZS95A (Walvis Bay) worked March 4, 1995 at 15:07 UTC
on Ten Meters during the ARRL Int. DX Contest. He gave WA3HUP as manager,
but in contacting her recently, she advised that she hadn't been his manager
for quite some time. Please help if possible...

When DXCC was first created, I don't think the founders ever imagined anybody would work *every country* on the list. Heck, it took years for the first DXers to get the 100 to earn the basic award.

I'm not so sure that a growing DXCC list is a good thing. Certainly, many new entities are the result of careful studies of geography and improvements in distance measurement. But others come into existance as the result of bloody wars. (i.e. T9, 9A, 4W, S0) Do we really want to see more nations split up just to create more entities for us to work?

IMHO that's what IOTA is for. The number of possible entities is far greater - and the rules can be changed to create more without offending national interests.

Jerry Hall used to have prop charts on his pages, but they have been
discontinued for a long time.
The ARRL used to publish them monthly in QST - but no more.
But not to worry -- they are alive and well at URL:
http://www.arrl.org/qst/propcharts/
I have found these a great aid in when the various paths are open.
Also W6ELPropTM is invaluable -- see URL: http://www.qsl.net/w6elprop/

Real time propagation assessment by the International Beacon Network.

All of these are best answered by searching the DX Summit spot database.
From http://oh2aq.kolumbus.com/dxs/ , click on "Spot Database Search".

1A has been spotted just once this year; 3Y was spotted 4 times; etc etc.

Re Africa, several stations have been very active from 7X (Algeria) lately.
For a while, it seemd like I'd hear Sadek, 7X2LS, every time I'd listen.
Do a spot search on Morocco (CN), too. South Africa (ZS) is always very
well-represented. Then there's the DXpeditions ...

It was some time after I got my HF license before I started hearing any
Africa, and they are still not exactly common, at least not on my rig.

They got all of mine right - and I managed to work 16 QSOs covering 6 bands
and 3 modes.

I mention my success only because the people who post a notice here are
likely to be those who have identified an error... and that is hardly a
random sample of the accuracy rate achieved by the team. I cannot imagine
what it is like working the types of pileups I heard during the two recent
DXpeditions -- I have troubles when I get two simultaneous responses to a
CQ! ;-)

That's a very reasonable idea. Some people have pointed out that only the more devleoped countries have the nicest rigs, but with a "trickle-down" effect it would seem to be only a matter of time before today's super rigs are distributed world-wide more evenly. That tells me that more and more will be able to dream of attaining high DX numbers. Thus increasing pressure to "make more" - IMHO. I like the idea of the IOTA-chase as most new entities are islands anyway. Who controls IOTA and how tied are they to ARRL and such?

The IOTA program is run by the Radio Society of Great Britain. Check out:

http://www.rsgbiota.org/

As such, it has no formal ties with the ARRL.

I am still hoping I will be posted in the XR0X log, but believe me, I can certainly understand that "things" can happen....

As an example I found my QSO in the log for CE0Y/DM5TI, Hartmut Stahr (GREAT last name!!), and while on his page at the link below, I found, in the center of the page, an "mp3" file of his pile-up.... After hearing that, I have a much greater respect for what these guys go through, and am glad there are guys out there that will take on this challenge.

Give a listen at:
http://www.qsl.net/dm5ti/ce0y/

1283. Propagation Fcst CQ Worldwide SSB WPX Contest

Newsgroup: rec.radio.amateur.dx
Date: 2002-03-29 16:16:56 UTC
From: Kevin Mcezer <KMEZER@tampabay.rr.com>
Message-ID: <Yr0p8.11588$y26.3075332@typhoon.tampabay.rr.com>
Source record: 13759

KN4LF 7 Medium Wave Radio Propagation Outlook Update #2002-10A Published 10:00 AM EST 02/03/29 For 02/03/29-02/04/01.

This outlook update is issued to cover the CQ Worldwide SSB WPX Contest this weekend.

Though this outlook is aimed primarily at medium frequencies, it is also very applicable on HF frequencies.

This 7 day mediumwave propagation outlook and other solar and propagation data can be found on my website at www.kn4lf.com/kn4lf5.htm .

Note! Due to requests from our fellow radio brethren in the international radio community I have adopted the date format of yy/mm/dd.

PROTON FLUX- During the outlook period of 02/03/29-02/04/01 the proton flux should remain below 10 MeV (10+0), barring any unexpected far side of sun proton producing solar flare events.

A proton flux level >10 MeV (10+1) creates increased day and night time D layer absorption on medium wave frequencies, especially on high latitude propagation paths but can also negatively impact mid latitudes, depending on the intensity of the event.

SOLAR FLUX- Yesterday's 2200 UTC solar flux level was 176 and during the outlook period 02/03/29-02/04/01 the daily solar flux should range between 176 and 190, barring any unexpected far or earth facing side of sun proton producing solar flare events.

High solar flux values are generally considered to be detrimental to propagation of medium wave signals both domestic and TA/TP, as more absorption can be present via the transmitted signals' two trips through the D layer.

Most long haul medium wave DX signals in excess of 3000 miles is via the E Valley-F layer ducting and/or Chordal Hop propagation modes. Therefore high solar flux values can aid in long haul medium wave propagation paths in excess of 3000 miles, as a high solar flux value ensures a strong E and F layer duct mechanism. However high solar activity in the form of increase ionization created by ultraviolet and x-ray radiation can fill in the E Valley region and interfere with the E Valley-F layer ducting mechanism. In a sense the E Valley-F layer duct is closed and the transmitted RF signal only propagates between the E layer and land/ocean surface, with a higher angle and more loss.

SUNSPOT REGIONS/SOLAR FLARES/CORONAL MASS EJECTIONS-

Solar region # 9878 contained a delta magnetic field structure during the past 48 hours and posed a threat for earth directed X class solar flares and Coronal mass Ejections. Fortunately this solar region has decayed dramatically since yesterday but still poses a threat for propagation disrupting M class solar flare eruptions that could have dramatically curtail good propagation conditions on 160 meters in the form of elevated proton flux levels above 10 MeV (10+1) and increased D layer absorption at day and night.

Solar region #'s 9880 and 9885 are magnetically complex enough to produce isolated M-class flare activity.

An earthward facing C9 or higher class solar flare will move the proton flux above 10o (10 MeV) and initiate large scale high latitude propagation path absorption but even smaller C4 flares are the culprit behind hour to hour and night to night variations in signal strength on the AM broadcast band and 160 meters, both stateside and DX, as a transfer of increased density and RF signal absorption from the day side D layer to night side of the ionosphere occurs through high level neutral winds.

IONOSPHERIC STORMS- Generally quiet geo magnetic conditions with a Kp of 0-2 and occasional elevations to 3 will be the rule during the contest. However A large recurrent trans equatorial coronal hole arrived in geoeffective position on 02/03/28 and our planet will enter a solar wind stream flowing from the hole possibly as early as Easter Sunday the 31st. This coronal hole stream could elevate the Kp index into the 4-5 range.

As the Kp index reaches 3 or higher, the aurora oval regions begin expanding equatorward in magnetic latitude and generally begin have a possible negative impact on mediumwave propagation. A Kp index of 5 or higher begins to have a negative on high frequency shortwave propagation. However at times skewed path propagation conditions can compensate for high latitude propagation path auroral absorption.

STRATOSPHERIC WARMING-

During the outlook period of 02/03/26-02/04/01 elevated day and night time D layer medium frequency signal absorption tied to continued Stratospheric Warming should not occur.

Stratospheric Warming is a major temperature change of the winter time polar and middle atmosphere from the tropopause (where the troposphere transitions into the stratosphere) to the base (D layer) of the ionosphere, lasting for many days at a time and characterized by a warming of the stratospheric temperature by some tens of degrees.

As the Stratosphere lies below the ionosphere, which is at mesosphere and thermosphere height, you would not expect to see stratospheric warming effect mediumwave frequency propagation in any way BUT mediumwave frequency signals do refract off of temperature inversions and moisture discontinuities and a temperature inversion is involved with stratospheric warming. So it's possible that a mediumwave frequency signal could do any number of things when refracting off of a temperature inversion, at any height. Also stratospheric warming (STRATWARM) has an effect on the D layer

by increasing radio wave absorption.

Also I've observed many times that stratospheric warming can coincide with major jetstream circulation pattern changes and movement of Arctic air from Siberian Russia across the pole to Canada and the U.S.

OUTLOOK-

Overall propagation conditions will continue be down 3-6 db as the medium frequencies continue a slow recovery from depressed propagation conditions of -10 db, due to last weeks elevated proton flux event of (10 +2) but increased power and good transmit and receive antennas will be helpful in overcoming the poorer conditions.

Expect fair to good domestic propagation in both hemispheres out to approximately 3000 miles.

"High latitude" northern and southern hemispheric, (TA) Trans Atlantic, (TP) Trans Pacific and cross equatorial propagation conditions in excess of approximately 3100 miles should be fair.

Mid latitude northern and southern hemispheric, (TA) Trans Atlantic, (TP) Trans Pacific and cross equatorial propagation conditions in excess of approximately 3100 miles should be fair to good.

(((There will be "high" lightning induced QRN levels in parts of North America during the contest.)))

Some occasional lightning induced QRN will also occur across the northern hemisphere, with an endless series of winter time approaching cold fronts and surface extra-tropical low pressure systems.

Considerable seasonable lightning induced QRN will occur across equatorial regions and the southern hemisphere.

Hi Mark -- Yep ur right -- but close enough for DX work -- hi hi.
Actually don't know about you W4's, but Iran, Oman, Kuwait and UAE are
really difficult paths here from the west coast on some bands, so I
inadvertently threw them in.
But thanks for the correction -- now where did I put that DX Atlas?

Due to my error regarding Iran, Oman, Kuwait and UAE being in Africa,
I ran out a copy of DXCC beam headings which includes:
Prefix, Country, Short Path, Long Path, Miles, Latitude. Longitude,
Continent, and CQ Zone.
I have no use for the beam headings since I have a Vertical -- hi hi. But
the other stuff is good reference.
But you may have not seen this -- go to Magnolia DX Association URL:
http://www.datasync.com/mdxa/
On the left -- Tools for the DXer Beam heading generator
Put in your long lat and get a great desk aid.
On the web there are more beam head stuff, maps, etc

Hi everybody, may be i choose the wrong news group sorry in advance if i did,
but i've got some question about this week contest:
Can i make some contact if i hear some new- one and i don't want to partecipate to the contest?
Do i have to send the log if i make some new one

Thanks in advance for the reply and sorry for my ignorance about this but i don't wanna cause any trouble to the stations that i contact if i would.
thanks a lot guys best 73's

Rod,
This is ridiculous. You are one of the most valuable contributors to this group. Please give us your ISPs name and e-mail address. It's time to stop anonymous fools from intimidating people like yourself who have not violated any tenant of this group's charter.
As the original "mentor" for this group who guided the process through the voting stage when this group was created, I can state with absolute certainty that there is nothing in the charter prohibiting occasional commercial references (assuming that this is what the anonymous protester is accusing you of doing), as long as they're on-topic which they obviously are in your case.

Figures a Ham radio based organization would force a ham radio
operator off its site...kind of like how the ARRL excludes operations
from DXCC.

Rod,

I have had only support from you, so hope I can return the favor.
Two things: Happy to contest any such allegations, but,...Secondly---
DUMP THE ISP !
(They're not worth it)

If you still feel you must leave then consider this; Once they know
they've chased you off the ng they'll go after your web-site next. Count on it.

Peace,

Andrew

From the headers on the original, it looks like his ISP is Cox
Communications. I checked their site, www.cox.net, and their AUP is
pretty standard boilerplate. I suspect the part he's getting hammered
with is:

"Messages posted to newsgroups must comply with the written charters
or FAQs for those newsgroups. Advertisements, solicitations, or other
commercial messages should be posted only in those newsgroups whose
charters or FAQs explicitly permit them. You are responsible for
determining the policies of a given newsgroup before posting to it."

The part of the charter that I suspect they are using against him is
as follows:

"Postings that would be considered inappropriate for this newsgroup
are those whose topic falls more naturally under the charter of some
other newsgroup in the "rec.radio.amateur" hierarchy. For example,
discussion of radios used by DXers would be more appropriately posted
to the "rec.radio.amateur.equipment" newsgroup. Similarly, general
discussion of beam antennas typically used by DXers would be more
appropriately posted to the "rec.radio.amateur.antenna" newsgroup."

Since there is rec.radio.amateur.swap, and it's meant to handle the
"for sale" ads, they're probably in a defensible position.

Which doesn't excuse the whiners who are causing this in the first
place.

I'd agree with the previous poster, and start shopping for a new ISP.
We'd hate to lose you.

I got the DX 'bug' in 1956 as a novice. I chased, and chased hard,
albeit intermitently, until I finally got the award in Sept., 1968. I
didn't get Honor Roll until the 80's and spent hundreds of hours (no
cluster) searching. Am still 3 short of the "Top" (Ducie, P5, 7O, all
worked). Not as much fun as chasing the ones from 1-200 but still
worth the effort. No instant gratification for those of us licensed
back in the "good old days". I gess we are not as anxious! I am not
sure how far back you would have to go to be able to have worked them
all by now but I would guess all 335 countries have seen valid ops
within the last 12-13 years. Just a gess tho.

Yes, you can. Just send signal report and QSO serial number.

>Do i have to send the log if i make some new one

No, you do not have to send in a log.

Anyone you hear will be happy to work you......

As opposed to these days?

The DX cluster might help, but with 100W, a vertical, and a QTH not
in the USA or Europe, there's still a fair bit of patience and
yelling required!

Nice bit of research, Bill.
Cox really sucks. They are my cable company, but I'd never give them
the time of day as an ISP. They have trashed local cable-tv markets from
DC to New Orleans by buying up existing Cable outfits and then upping
prices whilst degrading services. I'm still trying to sell the XYL on Direct TV
and then Cox gets the dump. Their ISP service adverts super-quick 24/7
on-line service that frees the phone line. But they always over-sell. They are
a faceless conglomerate and I hope they shrivel up and rot after trashing the
wonderful local cable provider I used to have until they bought it up.

Does anyone have FS (original or photocopy) a reception report guidebook from about 25 yrs ago? I don't remember the title or exact spelling of the author (something like: Macinkus?) Desc: softcover (yellow color), spiral bound, only about 50 pgs and consisted of key phrases for Ham/SWL reception reports in different languages (French, Spanish, Swedish, etc but also Arabic written in Arabic, Russian in Russian, Japanese in Japanese, etc)

Tnx for any info.

They do, it's called Field Day (3rd weekend in June)and Sweepstakes
(Nov/Dec). Either one will get US states on the air in great abundance

And, of course, the ever-more-popular definition, "someone with whom I am currently having an on-air argument over frequency, QRM or DX-calling practices." I consider the use of the term 'lid' to be more indicative of the speaker's radio skills than those to whom they address it.

Greetings,

On 03-02-02 I had my QSL cards for a 80M only Phone WAS award
checked by field checkers at a local hamfest (Winterfest in No. VA.). So far,
so good, but it's been 4 weeks and not a word. How long ought it to take the
ARRL to get my wallpaper to me ? Not sure of the checkers name so not sure
what to do next. Ideas or experience, anyone ??

Thx. for your patience with this OT post,

Andrew

Unfortunately I've had very mixed success in getting QSL cards for Field Day
operations. (I've worked a fair number of grids on 6m on FD)

Sweepstakes, however, is indeed a good choice. So are the North American
QSO Parties. (February and August) ARRL 10 and 160-Meter Contests too, for
those specific bands.

If you are outside the US, the ARRL DX contest works quite well for that!
I worked a few new states on 10m and 15m during the WPX last weekend,
but no new states overall.

1340. Problems with phonetics of my call on HF

Newsgroup: rec.radio.amateur.dx
Date: 2002-04-03 06:47:09 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3CAAA56C.9BC9A9A7@ix.netcom.com>
Source record: 13616

I've noticed that the phonetics for
my call "Whiskey Alpha two India Sierra Echo"
gets heard as "wa2 Juliet Sierra Echo" or
"wa2 india Sierra Tango". I've tried alternate
phonetics for my suffix, like "Italy Sugar Europe",
which sometimes helps. Maybe "Europe" is
a poor choice, maybe "England" would be better.
Kinda like using "Knife" for "K" :-)

My rig is a Kenwood TS440SAT, maybe the speech
processor is munging my voice some?

Robert

I have a similar problem. I use "Golf Four Golf Oscar Yankee"
and it is quite often heard as "Golf Four Golf Foxtrot Yankee"

Funnily enough, my rig is a Kenwood TS450S.

Regards

John Hague, G4GOY

I find "Golf" is the most problematic letter in the NATO Phonetic
Alphabet. Many people - especially Spanish speakers - have difficulty
in understanding it. I often have to resort to "Germany" or
"Guatemala" to make my prefix understood.

My rig is a Kenwood TS690S, which is like a TS450S with 6m added.
Fortunately, I operate 95% CW, so phonetics are not a major problem!

I've noticed the effect you describe, but only because the person speaking runs the phonetics together. A very slightly staccato delivery of the phonetics breaks them apart and makes it easy (for me) to understand. I hear a lot of people amost slurring their callsign and it's almost impossible to figure them out. I think we get so accustomed to saying our call that we do this without realizing it.

Yep.

I've found using the names of countries - especially Latin American
countries - can be quite useful when working stations down there.

Wow! Nice to know I'm not the only one with call-sgn troubles.
"Kilo-Gulf-Four-Juliet-Bravo-Mike" is forever coming back to me
as "Kilo-,.....Golf?, Four,....Something-Bravo-Mike -- I think. "

I get the most success using Kilo-Germany-Four-Japan-Bravo-Mexico.
But even then the DX-Op invariably "translates" it back into;
"Kilo-Golf-Four-Juliet-Bravo-Mike". This happens alot. I noticed
the tendency of both DX and myself to slur the Golf and Juliet both.
Using country names as phonetics also helps me to know when the
DX is calling me and not another. I recently upgraded to Extra and came
very, very close to requesting a call-sign change but thought I might end
up with worse (Like Kilo-Four-Gulf-Gulf-Juliet or worse !!). Vanity calls
are one way to go but then some sneer at vanities as somehow "not legit."

BTW, the rigs I've used are an old Yaesu FT-980 and a newer IC-756.
So I don't think it's the rigs; it's on the lips and in the ears. I sometimes
wonder about getting something like" Papa-Tango-Four-Tango-Papa"
That'll bust a pile-up. <grin>

I think a lot of us don't realize that we speak with an accent. I often find it difficult to follow U.S. hams from the deep south. Although I've never really had a problem with Hams from the North East, I'm sure that, for some people, the accent would make some words difficult. I'm sure that some folks have a problem with my accent (although it sounds fine to me). Maybe the solution is to listen to your pronounciation and try changing the accent a little on the words that are being miss heard.
Just a thought .. opinions may vary.

Hi,

I'm 16, and have been licensed for just over a year now. I currently have G5RV, and am quite disappointed with it.

My main interest within the hobby is contesting - my G5RV doesn't really cut the cake when it comes to contesting!

So, I'm now looking at vertical antennas. I was wondering how well they perform, both on TX and RX, but am looking for a vertical with the following:

- No traps
- No need for long (or any) counterpoises/radials

I have come across the GAP TITAN DX, but if anyone knows a good performing vertical antenna, would they please let me know?

Many thanks.

73...

Hi Simon,

Almost across the board, GAP products do not provide very useful
performance for the lowest band offered. That is, if the model is
built for 80M, it probably will only begin to work on 40M. They may
load suitably, but still not perform very well. Once you move to a
higher band, things improve, but not beyond the expectation of a
common quarterwave vertical.

The simplest advice is to put your antenna higher, and build it bigger
(but not too big, 5/8ths is the largest you should attempt for a
vertical). Height is the most important. Sacrifice everything else
(until the antenna becomes too small, less than 1/10th wavelength) and
make up for it with a tuner.

You will undoubtedly get good advice in regard to your G5RV here, and
the alternatives to it like Cecil's tunerless dipole. I mention this,
because as bad as you think it is, it will probably prove to be more

useful than a GAP.

I can only compare the G5RV against an R5, but I'd take the G5RV anyday. It performs heads and shoulders above the R5. I have had my G5RV up for about a year and it has worked great except on 40 meters where I can not obtain anything close to resonance.

Congrats on the licence.

Be aware that the antenna of which you speak was designed as a
compromise all (pre-WARC) band antenna with a low-enough SWR for the
valved PA transmitters of the day. There are those who say it is not
really suitable for a modern solid-state transmitter. Even with an
ATU, some of the compromises remain, such as radiation from the feeder
on certain bands.

>My main interest within the hobby is contesting - my G5RV doesn't really cut
>the cake when it comes to contesting!

I'm not in the least surprised.

>So, I'm now looking at vertical antennas. I was wondering how well they
>perform, both on TX and RX, but am looking for a vertical with the
>following:
>- No traps

You mean not necessarily any traps.

>- No need for long (or any) counterpoises/radials

I'm afraid that you _will_ need radials, even for a ground mounted
antenna, unless it is a half-wave. A vertical is form of monopole, and
it needs something to work against. This is either the planet Earth,
or if mounted on a mast, a set of radials. Radials for ground mounting
help the antenna connect to planet Earth, and reduce losses (mainly
resistive).

But there are other problems with verticals besides ground losses and
inefficiency. Noise tends to be vertically polarized, and as the
radiation pattern is omnidirectional and vertically-polarized, a
vertical will collect it all. There's no front-to-back ratio of a beam
to help you here. Field-strengths locally can be higher than a beam,
leading to the possibility of EMC problems.

But it's not all doom-and-gloom. A vertical can illuminate the
ionosphere more evenly than a beam, and - with plenty of radials! - a
low radiation angle and reasonable efficiency. You can take advantage
of this by being ready for the band of interest opening for you for
the DX, before the boys with beams. But you could have as little as

ten to twenty minutes of this; it also operates this way on band closing. In between, of course, you're going to be outgunned.

>I have come across the GAP TITAN DX, but if anyone knows a good performing >vertical antenna, would they please let me know?

I've tried to say above that ALL antennas have strengths and weakness; advantages and disadvantages; a named antenna hasn't necessarily any advantages performance-wise that one you make yourself. What you MUST do is a bit of background reading about antennas, finding out their individual characteristics, and finding which one(s) will help you in your goal. There might be one type of antenna that can do more things for you than another, but none will do everything.

In engineering terms you need to define what service you need from your gear, and then find what components - antenna in this case - will fulfill that. When you've done that and are getting the results, you will have engineered a solution, and learned much on the way. There are no 'silver bullet' solutions!

I hope you find this of use.

Good luck with the contesting.

I know what you are saying on the vanity calls, but who really cares, if you can get the call you need and want?

I was KF2XL when I lived on the East Coast, but when I returned to the Left Coast, I wanted a "district" call and loved New York, so applied for the vanity call and got it.

You will NEVER please everyone... many grumble at the thought of the 5wpm Extras, others about those having a "non-district" call, others about amplifiers, others about new hams on 160m, etc etc etc.....

I got off cheap with the Extra, only did the 13 wpm back in the mid 70', and I have a vanity call, but I'm having fun and, all the grumbling aside, I love this hobby and still think that as a whole, there are more nicer people as hams than anywhere else.

I was under the impression that the feeder (the ladderline) was SUPPOSED to radiate, which is why I got such good results with my G5RV against both vertically and horizontally polarized contacts. I could be wrong.

You're quite right. What I was getting at was that the radiation
pattern might not be what you think it is, and you could be trying to
work DX in a null rather than a lobe with some gain. There could also
be noise-pickup on the vertical section. But I was also trying to keep
it simple. You can't teach 'antennas' in one posting...

Hello Simon,
I would have to suggest against - any vertical - antenna...especially
in a competitive contest environment as you have stated is your
intention. I have had super success with a simple 5-band resonant wire
dipole built and sold by W9INN Antennas (W9INN-Bill) The Official W9INN
Antennas Web Page is located on the web site listed below in my sig
line. Here is what you'll find there....

The Official W9INN Antennas Page is located at....

http://www.ab7sl.com

1. contains actual measured field data
2. detailed illustration - 5-band resonant legal limit dipole
3. special " resonactors " page w/description by W9INN-Bill
4. antenna dimensions
5. contact and ordering information w/tel#

I have 307 DXCC countries on this "dipole" antenna!!
Good luck on your antennas pursuits and in contesting.

Actually - no!

If the G5RV is reasonably symmetrical in the air without too many
obstructions around it, and it is tuned with a properly balanced tuner then
it will NOT radiate from the feeder on any bands.

If any of these conditions are not true, however, then there may well be
some imbalance in the feeder and radiation will result - but not by design.

ANY multiband antenna of any construction, shape or design is a compromise
over a single-band, single purpose antenna!

Now, to the original question - I have an 80m dipole with tuned open-wire
feeder at 35ft and a GAP Titan mounted in a reasonably clear spot on flat
sandy soil. On all bands from 40m to 10m the GAP is at least as good as the
dipole, and on some bands for certain QSOs is better. DX performance on 40m
& 30m is generally better on the vertical, but mainly because of reduced
european signal levels. As somebody said before 80m performance is poor on
the GAP. Its not a mirical antenna, but its at least as good as any other
multi-bander and has a good bandwidth on all bands except 80m. It also

costs a lot of money ... a lot more than I had when I was 16!

Neither of these antennas will be competitive in large contests on any bands .... you need a 3kW amplifier and all controls turned to maximum (especially the speech processor) to join in! (It also helps if you listen on the frequency before transmitting, but that appears to be optional!)

I always had to use phonetics to get my previous call across: Kilo Victor
Three Japan (Juliet just didn't work as well.)

If I said the call KV3J it would usually come back as KB3J.

Well, if it's KB you want...then KB you get.

True Walt. Best story: several years ago there was a big pileup on 40
CW (I forget the station now). I, and many others, called. He came
back "2UP?" The pileup QSYed up 2. I called again, and he came right
back to me!

WOW! Interesting that other folks have a problem,also. My call, N0SCE, is usually NOVEMBER -ZERO -SIERRA- CHARLEY -ECHO. My biggest problem is having the ECHO heard as PAPA --something I haven't figured out. I especially get this from Latin stations. With them, I try SANTIAGO-CANADA-ECUADOR with Spanish pronunciation, and it works a little better. I have used SHAKESPEARE-CANTERBURY-ENGLAND with a G0 when things were rough. The fact I am using an HTX-10 (25w) might have a little to do with it, though my better condition reports have always been good.

Simon,
Any antenna will benifit from having a good ground
under it, the 'Gap' antennas also. While I'm not much
of a 'G5RV' fan, it will work as well, or better, than
any of the 'no-radial' vertical antennas on the market.
As someone has already said, elevation will do more for
you than anything else will, with the G5RV.
The 'Gap' antennas may not have the 'classic' style
of traps, but they do use devices that serve the same
purpose, and have about the same 'losses'. The 'trapless'
thing is a sales gimmic, and should be treated as such,
lump it in the same catagory as their 'gain' figures...
'Doc

Two questions for you on the W4INN antenna:

1. It looks like the 15M and 40M elements just hang down - Don't they twist
in the wind and end up all tangled around the mian wire ?

2. How well would it perform if hung vertically ??

Hello Recticulum,
>Two questions for you on the W4INN antenna:
It's W9INN Antennas not W4INN - just so readers will know....

No it doesn't twist or wrap around itself in the wind. The wooden
dowel spacers (about 12 inches long) keep the
elements in place and after nearly 6 years of use I have had no trouble
like that or any maintenance of any kind. According to the free info
available from W9INN it can also be hung vertically or even as a sloper.

The W9INN Antennas Page is located at the website listed below....

Verticals radiate equally poorly in all directions.

If you are not able to put up a tower with a beam, put up an all-band dipole. You will need 135 feet of antenna wire, 100 feet or so of open-wire lead (ladder line) and an antenna tuner to match the unbalanced output of the transmitter to the balanced line.

Feed the 135 feet of antenna wire in the middle with the ladder line.

Look around the various ham radio sites -- the AC6V site is a good place to start -- and you will find dealers selling an already assembled all-band dipole.

Hi all:
I just hate to see anyone buy a dipole. Any ham should be able to make a dipole. They are so easy to make, even ones like the W9INN dipoles. They are not "magic", they are just normal dipoles. I'm sure that he makes them very carefully and the like but gee it's so easy to do it yourself and you also learn a little bit. In dipoles like W9INN's the main "secret" is to tune the lowest frequency wire first and then the next lowest and so on. The main disadvantage to the W9INN style dipole array is there is a lot of coupling between elements which means that cutting can get a bit fussy but its not that hard. Try it, you can make one just as good yourself. Even shorted dipoles and trapped dipoles are not that bad to do. I will admit that an antenna analyzer and an antenna modeling program like EZNEC can help by cutting down on the amount of cut and try.

Hello John,
I think you may be over simplifying a tad on the W9INN multi-band resonant dipoles. Bill-W9INN uses resonactors as band selection devices.....it is more involved than just 'cutting the wires" and also with resonactors the element "coupling" as you call it is eliminated. Resonactors are explained on the W9INN Antennas Page of my site which is listed below in my sig line

But just for the record John.....can you explain what testing method you used and also exactly which W9INN antenna was analyzed so that you were able to measure, record, and publish your claims as you have now done so here? Just the facts - OK?

I recently put together a pool for sending a Registered envelope to
3B8. I got an email confirmation of its arrival and assurances of
a reply. That was very recently so it is still in the works

What I did to generate a pool. I offered to receive outbound envelopes
sealed with whatever the DX'er deems sufficient with regards to return
envelopes/GS or IRCs. I did not open these simply forwarded them in
a bundled Registered package. The cost was about $2 each. I put this
idea out on one of the email reflectors and when we reached about 8, I
closed the group and waited for the envelopes.

This can greatly reduce the cost of sending Registered to the problem
areas.

Hi folks,

PHEW! Thanks to everyone who replied to me, both personally, and through the newsgroups.

I've had quite a mixed response from people saying that verticals only work best for over the sea, and horizontally polarized antennas work better over land.

But I've had people saying that the GAP works well, on all bands, both on RX and TX for DX only (EU stuff on the 5RV)! Oh and the Force 12 Sigma-V vertical.

I have also been pointed at the 'CobWebb' antenna - which is claimed to have 5 - 7dBi gain on all bands. The ham which pointed me in the direction of this antenna... Take a look at http://www.g3tpw.ukgateway.net/ - although I'm limited for space, I

might just about get away with this.

Looks like I might stick with a horizontally-polarized antenna for now - looks like they may be best for contesting. Has anyone else got any more suggestions?

Thanks in advance,

73

Simon

I use a half-wave dipole cut for 40m at about 8m agl (supported under
the eaves
of the house) and fed with twin-feeder into an MFJ-948 tuner. The rig I
use is a
Kenwood TS-450S. The dipole isn't straight by any means - the last
approx 4m
of each leg are bent by about 45 degrees so that they can be supported
by nearby
trees. However, I can operate successfully on all bands between 40m and
10m.

It may not be a world-beater, but I ran in last weekend's WPX contest
(SSB) on
40m through to 10m and managed 500 contacts in 76 DXCC entities - so it
can be
done.

All the best and good luck with the contesting.

Best Regards

John Hague, G4GOY

Simon
been out of the country for a couple of weeks but missed the threads
so hopefully this isn't a mere repeat of other folks.

I use G5RVs quite often at temporary stations - they are not my favourite antenna but do allow simple operator as most inbuilt rig ATUs can tune them. I usually find the coax feed length critical if they are to be tuned OK on all bands (normally we have a problem with 15m, sometimes 10m).

For real contesting you will need a directional antenna and, of course, for worldwide contesting, it needs to be steerable. Don't know about you but I have neither money, nor space, nor neighbours for a 3 ele beam on 20m let alone 80m.

IMHO the best simple antenna is a doublet, ie a dipole fed with ribbon line to a balanced ATU. The John Hey book Practical Wire Antennas has details of lengths to avoid. I run 102' doublet fed by commercial 450 ohm ladder line. Ideally this should go to a balanced ATU but because I need to feed it via coax to my XYL's shack as well as mine I terminate the ladder line outside with a commercial (Radio Works) 4:1 balun and use a very short coax run to my Elecraft K2 inbuilt ATU. This seems to work pretty well. My previous antenna was a windom, again with a 4:1 balun, this time at the feedpoint, with coax to the rig. I think the doublet is marginally better (I have it about 8' higher at 35' which also helps) and between them I have 150+ DXCC countries on 10W SSB.

As a comparison I also have a Cushcraft R7 vertical. This tunes up on all bands 40-10m without the need for an ATU and gets reasonable reviews for a vertical - it has the plus point that it doesn't require ground radials. I typically got 1-2 S-points more on the Windom and now 2 S-points more on the doublet. Occassionally the R7 performs as well or possibly mariginally better than the doublet (particularly on 40m) depending on direction and skip.

Hope this is of use.

You are trying to paint a 16 color picture with 1 color. What would be
good will depend on the band you prefer. I get the hunch you want all
of them, but getting "contest buster" performance on all bands with a
single antenna is gonna be tuff. I'm not a great fan of the GAP
designs. They use intentional resistance to get a better match. Also
they claim that elevating the feedpoint cuts the need for radials.
Don't believe it. Myself, using intentional resistance is something I
can't quite stomach. You have enough problems with unintentional
losses to need any extra. Mostly ground losses with a vertical.
Being you don't want radials , I would totally rule out a vertical
unless you use an elevated "1/2" type vertical like the cushcraft R7
or whatever. For 20-10 meters that will give you the best performance
with no radials. The higher, the better. What you probably should do
is improve the wire antenna you have.
Maybe concentrate on fewer bands , so you can use better antennas. A
regular coax fed dipole using no tuner will seem like a miracle worker
compared to the average G5RV with the tuner losses it has , and the
stuff they stick in the feedline. You can use some on more than one
band. A 40 meter coax fed dipole will work 15m pretty well. The SWR
might be a tad high, but you could lower that with a tuner.
At least you know that most of the power that leaves your radio or

tuner will make it to the antenna and radiate. The losses in coax with a low SWR are very low on the HF bands. You have many options for good antennas with some gain, but they tend to be single band unless you use ladder line. Say you like 20m... Try an extended double zepp. Thats good for nearly 3 db broadside. Like 10m? Most 1/2 and 5/8 wave CB antennas work well on 10m. They will outdo most multiband amateur verticals by a sizable amount. A small yagi even better.
If you like 80 or 40 meters, I would stick with coax fed dipoles. Don't use a tuner. You can run both sets on the same feedline if you want." Parallel" Will work much better than the average G5RV. 80m, no contest. Of course, for the low bands, a vertical is usually best for long haul dx, but you need a REALï¿½ vertical with lots of radials under it. I mean like 30-60 for a ground mount. If you can't deal with that, I'd stay with coax fed dipoles. Thats the best you are going to do on a fairly small scale. If you must have an all band antenna, I'd use a 130 ft dipole fed with 450 ladder line the whole way to a good tuner. Or use Cecils no tuner method. Always use the least amount of inductance to tune. Using too much will cost you 20% of your power in many cases. This is why I prefer coax fed and no tuner. Even using the least inductance, I can still tell a difference. You waste very little power with coax. I ran a coax fed dipole at 40 ft for 20m SSTV and I don't think there was a single time anyone couldn't hear me. I worked many dx stations with 40w of video. They didn't receive snow flurry pix either... :) If I'm S7 with the dipole, I'd only be about 1-1.5 S units stronger if I was running a full size 3 el yagi at the same height. Only with very weak signal levels would it be enough to make a real difference.
You'll never be as loud as the big strappers with big tall yagi's and 1500w amps, so get used to waiting in line. You can make it once they get through. MK

I found some new variations on my call during the WPX contest
last weekend. My call is VK3SB, but that was received as:

VK3KB (happens all the time, don't know why)
VK2SB
VK3SB
K3SB (this happened a lot)
DK3SB (once)

I get there in the end. 100W to a vertical. There weren't many VK3s
on, so most people should be happy to listen for the multiplier.

Dear Simon,

Your G5RV will be improved by replacing the coax with
more widowed twin line and using a balanced ATU. You
may have a rig with a built in ATU but these don't have
the amount of adjustment needed to tune up all bands.
They are really only useful for matching to a linear
or correcting a slightly off resonance antenna. Have
a look at
http://www.cebik.com/
for the best on-line antenna info.

Other replies have pointed out some of the advantages
and disadvantages of verticals. If you live close to
neighbours you may find that a vertical causes many
more EMC problems than a horizontally polarised antenna
and, as others have stated, will pick up a lot more
local noise.

The G5RV may well radiate from the feed line as it is normally driven unbalanced. A doublet will be more effective if it is driven balanced and it will then only radiate from the antenna and not from the feed line.

I have had the good fortune to work with several folks from other
countries in my life time and one thing that pops up constantly is
that we speak too fast for them. We are used to talking to another
person that understands our every word so we talk faster but throw in
a person whose primary language is not English and things slow down a
bit. I hear it all the time a US station rattles off his call some so
fast that even I dont catch it now add noise and 300 others calling
and the jammers and the cops and its a wonder anything gets thru. Try
down-shifting once and see if that doesnt help a bit.

Walt, nonsense !

With a 1/4-wave vertical, 99 times out of a hundred 8 or 16 or 32 at most
are quite good enough. You've been plagiarising the old wives utterances yet
again. ;o)

I think KB7QHC is right - you are unlikely to be much happier with a
vertical than you are with the G5RV. (and I'm sure the G5RV was much less
expensive!)

One antenna I've had surprisingly good luck with is a Windom. It's a
dipole, but off-center fed. 26.8m on one side, 13.4m on the other. Use a
4:1 balun, either at the feedpoint or connected to the feedpoint through
some length of 300-ohm flat TV antenna feedline. I'm told (but haven't
tried) that you can halve those dimensions if necessary - losing 80 meters
but not affecting the other bands.

That's what I use on my second radio for two-radio contesting. It's no
competition for the tribander, but it's pretty effective. Whether it would
beat a G5RV I don't know.

It's my understanding that the number of radials is
also dependent on the height of the verttical above ground.
That is, the feedpoint. Furthermore, the greater the height,
the lower the take-off angle; a key consideration for any DX
work.

With dipoles it's *horizontal* length that's needed.
I can't tell how you many times I've sighed when I read
someone saying, " First you string 135 ft. of wire."
So easy to type, so impossible for many of us to do.

I use trees for height and support, but they also lock
you onto anchor points that may leave your broadside working
OX and you working the world off your dipole tips. Dog-legging
effectively destroys dipole gain. Using comm'l towers implies
serious money for any real height. Using Beam-type antennas
like Quads and Yagis locks you into fewer bands unless you
have both money *and* real estate. Using homebrew masts can
often mean loss of real height and still may not be practical due to
trees or other obstructions. And let's not forget we loose a chunk
of the yard as we dare not cross the dreaded power line !

In other words, this is the fun-stuff !

Hi all:

Well perhaps I could have "over simplified", but traps and loading coils are still traps and loading coils even if you come up with nice marketing names like "resonactors" or as Alpha Delta calls them "ISO-RES" inductors.
They are still dipoles, they work no better than any dipoles. Don't get me wrong, I have no problem with trapped and loaded dipoles. I made my own for 80/40/30m which looks very much like the W9INN antennas. I am well aware of the trade offs in that type of antenna. With careful construction and design they work so close to a full size dipole that it would be very hard to tell them apart even with a well equipped test range. My dipole is up about 35' and I've worked 87 countries on 80m in the last 5 months.
It still puts most of the power straight up, so I also work states around me well too. It works just like EZNEC predicted it should.
My main point is that dipoles are a simple antenna, and any Ham should be able to build one himself that would be indistinguishable from ANY commercial dipole at his location, and height.

I have to agree. I not only haven't got the room to put up a dipole (unless 16' counts!), nor a G5RV, or any tree to hide anything in. I am prohibited from putting up any kind of outdoor antenna whatsoever. So anything I can manage to stick up has to be disquised. You've heard of the antenna that looks like a flagpole, well I have an antenna that looks like a hedge! I have no wire fencing to support anything. I can run a longwire against my brick wall, but we know how well that will do. I would love to try the Isotrons but they are so expensive. I just keep trying different types of hidden antennas until I find one that works. They ALL receive well but don't radiate worth a darn. This is what I love about the hobby.

Anybody got a spare 20m Isotron laying around they want to see put to use?

Apartments above me and on both sides! I could possibly put an Isotron in
one of the upstairs bedrooms. That would get me about 30' off the ground.

1405. Dayton Hamventon - Tickets ??

Has anyone received there Hamvention Tickets Yet ?
My check was cashed last month, and have yet to receive my tickets in the mail.

I have also written 2 emails to the ticket information email address from the hamvention.com website, and have yet to get a response.

Any comments ?

I understood that on some lower bands the feeder was
designed to radiate; I would be grateful for a bit more detail on
this. Should the feeder radiate, then as I said , there will be
noise pickup on this on receive, which will degrade the signal-
to-noise ratio.

> If the G5RV is reasonably symmetrical in the air without too many

Well, there's many ifs and buts there! And modern gardens
generally don't have so much clear space. But we don't know
the original poster's situation as far as that is concerned.

> ANY multiband antenna of any construction, shape or design is a
> compromise over a single-band, single purpose antenna!

Of course it is.

> Now, to the original question - I have an 80m dipole with tuned
> open-wire feeder at 35ft and a GAP Titan mounted in a reasonably

> GAP is at least as good as the dipole, and on some bands for
> certain QSOs is better. DX performance on 40m & 30m is generally
> better on the vertical, but mainly because of reduced european
> signal levels.

I'm sorry to say that the statement that "On all bands from 40m
to 10m the GAP is at least as good as the dipole, and on
some bands for certain QSOs is better" is the sort of
sweeping generality that ignores the fundamentals and as a
consequence gets some antennas a bad name where it isn't
deserved, and some a good name that isn't deserved either.
You are simply comparing apples and oranges here. Your
'dipole' (by which I think you mean a doublet resonant on 80m)
has a variation in radiation pattern as a function of band that

simply doesn't exist in the same form with a vertical. On some bands you could be operating with a major lobe (with gain!) to a target area, and on a different band the same target area could be in a null (with negative gain!). This alone could give rise to the basis for your statement, but it isn't as a comparison of a vertical and doublet on otherwise equal terms - it is as a function of the changing radiation pattern of the doublet!

This is why I said to the original poster to mug up on antenna radiation patterns, decide what he can put up in his own particular location, and operate accordingly using the advantages of the chosen antenna to the maximum, and being mindful of it's disadvantages

> As somebody said before 80m performance is poor
> on the GAP. Its not a mirical antenna, but its at least as good
> as any other multi-bander and has a good bandwidth on all bands
> except 80m. It also costs a lot of money ... a lot more than I
> had when I was 16!

Biut WHY is 80m performance 'poor' for the GAP? Over what ranges? Day or night? Seasons? These are all important factors. What other fundamentals are being ignored here - if any! I'm not familiar with this antenna, so can't really comment apart from raising the obvious questions.

> But it just could be Neither of these antennas will be
> competitive in large contests on any bands .... you need a 3kW
> amplifier and all controls turned to maximum (especially the
> speech processor) to join in! (It also helps if you listen on
> the frequency before transmitting, but that appears to be
> optional!)

LOL! I've got to agree with you there. But I also tried to say to the original poster that with a system designed by him, where its good and bad points are known and explored, he could have a reasonable shot at contesting; but he'll have to bear in mind the points you've just raised. It boils down to station design and operating skill, something one has to learn....usually the hard way, but not necessarily expensively so. And picking the right contests - about which I can't offer any advice.

Thanks for responding, I quite enjoyed this. I hope we haven't left the original poster behind or forgotten his needs. As I said, you can't teach it - or learn it - all in one posting. Antennas can and have formed the basis of lifelong experimentation for some amateurs. It's a topic I personally find fascinating.

Simon,

Well, by now you've probably noticed several things:

1. That you got a lot of educated responses to your query.

2. That most of them were confidently presented as the " last word."

3. That many of them seem at odds with each other, so now what?

Welcome to Ham Radio ! I absolutely promise that any antenna thread,
if it should continue long enough will get increasingly opinionated and
end up in a flame war eventually. The outcome is rarely for the sqeamish.

So what's my two cents worth? Well, I would emphasize what maybe
others have implied without always saying: You and your unique QTH are the
deciding factors. All the design in the world won't squeeze a 200ft. tower in a
townhouse backyard, etc., etc.

I would urge you to do a lot more careful measuring. You need to view
your lot as a series anchor points and elevations bounded by property lines. You
must think in a 3-D fashion. You might even find it real fun- like a puzzle !
Even one tree and one roof offer myriad possiblities. An IMPORTANT consideration
to remember is that while that broad-band dipole might have a pretty figure-8 on
one band it might have annoying minor lobes on the frequency you'll use the
most. Furthermore, while the major lobes at one freq. may be pointed at your DX
target, on another freq. that target may be lost to you because those minor
lobes have killed your ability to reach that DX. What works well to Europe on
one band could end up pointed at Greenland on another using the same antenna.
No kidding.

Your best tools outside will be a tape measure and a compass. You need
both. Don't guess your headings because remember your major lobes will alter as
you move from band to band. Your best tools inside are caculator, PC, internet
and however many books you've time and energy for. The time spent actually
building and hoisting your antenna should be no more than 15-20% of your total
time on the project -- even if you buy a commercial one. The Cobweb doesn't
impress me personally because it looks like the reason it radiates equally well
in all directions is because ot has gain in none of them. Dipoles are the
cheapest and easiest gain-for-money there is; Why throw it away ??

BUT BE WARNED:

Because if you do your homework properly you're going to discover
one of the TERRIBLE TRUTHS of Ham Radio; That, as we gain experieince
and knowledge, ultimately the sum of our talents and abilities will exceed what

our time, our money, our families, our real estate, and our community allow.
And nothing will get you through that wall.

(You said you're 16; If you're sharing this with your Pop he might tell you
there's a lot of other things in life that work just like that. Just ask him.)

I'd be surprised if you're happy with the performance of an Isotron,
tho it will be better than nothing. Better to make up a short dipole.

A couple years ago there was an article in Worldradio magazine
describing a dipole with sprialwound end loading coils that was only 12
feet long on 40 meters, and could be about half that on 20. If I recall
the total length of the antenna elements plus the spirals equals a
halfwave. I don't have a reference at hand, maybe someone does. It used
aluminum Radio Shack ground wire for the spirals. You might be able to
make up one of those and hang it out an upstairs window when you want to
operate, or just temporarily mount it as high as you can
on the ground and take it down after use. Something you can come up with
will work well enough to get you on the air. Keep trying.

Rubbish. The more the better. One radial per degree (=360) isn't too
many. And it isn't a factor of two either.

==========
Dear RVMJ,

Wrong ! When a 1/4-wave vertical is 1/2-wave or more above ground there is nothing to be gained by having more than a single 1/4-wave radial. I know it's difficult for a non-mathematician to take in, but you can't have anything more than 100% efficient.

> to-noise ratio.

The original design of the G5RV is a 3 half-waves doublet for 20m - on which band it can be outstanding in the favoured directions - it is not a compromise antenna here by any means! On the other bands (exc WARC) the feeder length & impedance has been carefully choosen to present a 'reasonable' match to a valve amplifier - certainly one that can be tuned out.

Modern transceivers will always demand a better match, therefore a tuner should always be used - and preferably a balanced one. (Note, most if not all commercial ATUs are not balanced. Some have a balun at the antenna input which is a pretty dodgy trick on high impedance or highly reactive loads).

Under these conditions there is no *intended* feeder radiation.

Many articles on the G5RV show it being used with the feeders strapped together and tuned against ground on 160m. This of course is ALL feeder radiation, and none off the top, but its not a G5RV anymore, its a top-loaded Marconi vertical!

Absolutely - coupled with the fact that "commercial" G5RV antennas (I really don't know why people pay all that money, but there you go!) have a coax

transformation at the end of the ribbon feeder and if tuned at all will be by an unbalanced tuner - so in reality a good proportion of G5RV antennas will exhibit feeder radiation, and hence behave differently from that predicted.

> deserved, and some a good name that isn't deserved either.

I agree completely - as a professional radio engineer! Its simply an operational observation, and as you point out is pretty worthless, other than to verify that both antennas are obviously working!

By way of defence I once had a small vertical antenna with a trap in it - and this performed consistently worse than a horizontal dipole, so subjectively I concluded that the trap was contributing a discernable loss.

By making such a sweeping statement you might at least deduce that you wouldn't be completely wasting your money!

> You are simply comparing apples and oranges here. Your

Quite right - and also the vertical antenna to boot - which is affected by its surroundings up to about 20 wavelengths away, which in my case includes houses & trees!
>

Excellent advice - and that is why I have a great circle map on the back of the door with all local obstructions & antenna orientations for my garden marked up on it!

> apart from raising the obvious questions.

All good questions - but fundamentally this antenna is too short to be an effective radiator at this frequency - though it does resonate as designed, and is quite effective as a receive antenna as the Eu/DX noise ratios are different (another sweeping generalisation, of course!)

> advice.

I agree - I am moderately successful at some HF CW contests - by picking ones which match my limited availability & equipment. eg a short European contest with a 100W section where predominant QSOs are on 80 & 40 - operated with a lowish dipole can give a good placing.

The best contests are those where high power & big antennas do not dominate all the tables .... try ROPOCO this sunday morning on 80m for example.

Yes - I've been playing with antennas since 1973 and still have a lot to learn. Apart from VHF yagis the only antenna I ever paid real money for was the GAP vertical - and that was because I was living in a block of flats at the time in another country and needed something which was fed with a single coax from 5 floors below, worked on all bands and was simple to erect. Most of the time its suck it and see, and its very difficult indeed to be objective about performance. However, one field day some years ago I designed (as in with sums and theory!) a 4 element vertical antenna for 40m, fixed on the USA. Everything checked out on site with a field strength meter, but it wasn't until about 2 am when we had the first call from the US that I really know it was working ... we switched from the standard 40m

antenna (a delta loop) to the beam. The European noise all but disappeared, and the US signal hit the end stop! Now, that was job satisfaction. We didn't win NFD that year though, only came second! (G3RAC/P in case you are wondering).

Thanks for the oportunity for the debate - but why the secrecy?

> better over land.

Thats silly. The only type of ground that really matters is whats
under the antenna, and the ground quality in your local area as it
apples to the far field.
What really matters assuming both types are properly installed, is

what band, distance, time of day, etc. I'm on land and I use both at
times. Which I would use will depend on the distance and path. On 40m
I ran a dipole at 36 ft, and also a full size 1/4 wave ground plane at
36 ft. if I were working regional distances out to about 800 miles,
the dipole will almost always be better.
Past 1000 miles the vertical would almost always be better. At 1500
miles at night, the ground plane would be 2 s units stronger than my
dipole. From Texas to VK land, 4 s units. But if I woke up the next
day and decided to work Dallas from Houston, I better get on the
dipole if I want the best signal. As you can see the ground doesn't
mean anything as long as you take it into account when designing the
antenna. If you are on lossy earth, that just means you have to use
more radials to reduce the ground losses to an acceptable level. As
another comparison on 40m, lets compare my 9 ft mobile antenna on my
car to my 36 ft dipole at the house. Everyone knows the dipole is much
more efficient. Thats a given. But that still doesn't stop my mobile
antenna from outdoing my dipole at 800 miles or more at night. Why?
The radiation from the mobile antenna just happens to be strong at the
angles I want when talking that distance. Being the dipole at 36 ft
shoots mostly straight up or at fairly high angles, it loses in that
case. This blows the whole ground vs water, etc theory out of the
water. My mobile was sitting in front of my house in the driveway, not
at the beach. It would perform better at the beach, but it's certainly
not required.
>
> But I've had people saying that the GAP works well, on all bands, both
> on RX and TX for DX only (EU stuff on the 5RV)! Oh and the Force 12
> Sigma-V vertical.

The GAP might seem to work ok if you have nothing better, but believe
me, as antennas go, it's pretty lame. I wouldn't stick one up if
someone gave me one free. I'd sell it and build or buy a real antenna
that has no hidden resistances.
>
> I have also been pointed at the 'CobWebb' antenna - which is claimed to
> have 5 - 7dBi gain on all bands.

Whoever claimed this is on some kind of drugs. Or they use the effects
of ground to "bolster" the antennas performance without mentioning
they are including ground effects. I hate it when people do that.
Really irks me... A cobwebb is a folded back dipole. It has LESS gain
then a normal straight dipole.

The ham which pointed me in the

> suggestions?

Not really. I've already about covered it in my other post. If you stick with wire antennas, coax fed dipoles or a tunerless ladder line system are the best. Ladder line all the way to a good tuner is the next best. It all goes downhill from there. MK

Really Reg! Nothing to be gained?

Reg is correct on one point, you can't get more than 100% efficiency. Unfortunately, there is more to consider than just impedance and efficiency.

Let's first imagine that we point Reg's one 1/4 wave radial directly down. We have a classic 1/2 wave dipole. Works very well, presuming the feed is adequately balanced.

Now let's point Reg's one radial horizontal. We now have a bent or V dipole. We certainly don't have a vertical monopole (in the strictest sense of the definition). We still need to adequately balance the feed, something that is unnecessary if we have a reasonable number of radials. Second, we don't have an omnidirectional radiation pattern. We would if we have a reasonable number of radials. With a 1/4 wave vertical antenna, the radials serve several purposes that the mathematicians obviously overlook.

Tuning across 10m this afternoon, I heard ZD7VC calling QRZ? My thanks go out to the operators who were courteous enough to work him for the second and even third time. I understand it is Bruce's choice which call he answers, but if you have already worked him (and as rare as he is), why not give the little guys a chance. I have to operate mobile about 99% of the time due to antenna restrictions at home, and it isn't too often I get a chance like this. Thanks again guys!

At that point, a vertically mounted dipole does the job.

I know

Yeah, I'll have a guess - a 1/4-wave vertical with a 1/4-wave radial, top or bottom, at 90 degrees has for practical purposes the same radiation pattern as 1/2-wave dipole sloping at an angle of 45 degrees.

Furthermore, its feedpoint impedance will be much nearer to a non-reactive 50 ohms than the ordinary 72-ohm straight dipole.

1426. DUCIE ON LINE LOGS HAVE MORE ENTRIES!!

Newsgroup: rec.radio.amateur.dx

Message-ID: <3CACF055.B3CFB3C7@erols.com>
Source record: 13552

The on line logs for Ducie have been updated. See:
http://www.qsl.net/wd4ngb/ducie.htm

Note: A number of 10M entries show VP6DB** next to them. Assume this was one of the Ops working at Ducie and not considered a QSO with VP6DB off the Island. Because other bands do not have such an entry it is confusing. My 10M contacts were made on 17/18 March while the team was still on Ducie.

Greetings,

I know what I'm doing can't be right. Can you help?

I'm trying to use the "Antlers II " CD-rom that came with the book,
" Joe Carr's Antenna Toolkit". I'm using as my QTH, Wash. D.C.
(program has this as 38.9N, 77.03W) Now selecting Bombay
as a target the program is giving me a bearing of 31 degrees.
Meanwhile Tunis which is at a higher lat. last time I looked at a
map is at a bearing of 61, according to the program.

All this has gotten me hopelessly confused. So there must
be something really simple I'm overlooking, or the program is screwy,
or maybe I died and was reborn in Bizarro World. I mean if N = 0 deg.
than wouldn't due east be 90 deg. I know mercator projections can be
decpetive but last I looked Bombay was not NEE . Help ??

Thx.,

Andrew/ KG4JBM

You are seeing "great circle" bearings, that means you must look more
eastward to see Tunis, and more to the nothern see Bombay, via GC.

Okay, I can try to see that. But now,...does this translate into the
bearings on my hand-held compass. Bottom line: If the program says that
Bombay is 31deg. from my QTH and I've got a dipole that broadbands at
a compass reading of 31deg. is the antenna pointed the right way ??

And again, thx.

|together and tuned against ground on 160m. This of course is ALL feeder
|radiation, and none off the top, but its not a G5RV anymore, its a
|top-loaded Marconi vertical!

Actually, one of those articles is the original Varney paper.

(http://users.triconet.org/wesandlinda/g5rv.pdf)

So, by the popular criteria that the antenna described by Varney is a "G5RV",
this configuration *is* a "G5RV" too, although Varney described it as you do.

Actually, Varney's claim to fame is the *magic* 102 foot length. As I have
already claimed in a much earlier post, dipoles 102' in length are "G5RV"s,
balanced(?) line, end-fed wires are "Zepps", off-center-fed dipoles are
"Windoms", dipoles with the ends lower than the center are "Inverted-Vee"s and
all other dipoles are "N7WS"s.

it was my understanding it was composed of a lot of thin coax wound
into the lower section of the antenna.
But I may be wrong on that. But it's still an inferior antenna no
matter how they made it. It's been carefully compared to other brands
of verticals and lost out. Assuming each type had the same number of
radials under them, which I'm sure they did, if the GAP loses against
other same size verticals, it must have some excess loss somewhere.
I've never heard of one doing that well on 80m. The butternut did
quite a bit better. I'm pretty sure it was W8JI who did this
comparison. I think others have too. There may be something in deja
google...A friend of mine had one and it was near useless mounted in a
manner that they suggest. Someone gave it to him free for that reason.
The first owner couldn't get decent results out of it either.I think
the friend of mine ended up pawning it off on someone else...:/
Myself, I'm not crazy about any of the multiband verticals compared to
a full size monoband vertical. The butternut HF2V is pretty good for
80/40, but I made my own version for peanuts compared to what they
charge. MK

Check out this great, actual comparison by Mr. Banz. Helped me decide that
with no space for height and no radials, the GAP Titan DX was the way to go.
I still love it.

Oh, for crying out loud! If you can't stand the heat, get
out of the kitchen!

We hear this complaint all the time, and it never fails...
It's always someone else's fault that you did not get
the DX.

Give me a break! I've broken a few pile-ups from
my mobile from time to time and never did I whine
about all the other guys that worked him first.

Tell you what, look up the ZD7 in the telephone
book and tell him to listen for you, or better yet,
call him on the telephone and log THAT...

And before you ask, I don't have what you would call
a big station either. Pretty mediocre, in fact. If the
pile ups are too big, then opt out. Don't come crying
here, OK?

Jeeze!

Bad day too eh Gary? Well, I've broken more than my share of pileups from the mobile as well. Being forced to run /m 99% of the time I try to maximize my signal. My complaint, not directed at you by the way, was this...I didn't see the courtesy of the other operators in needing to work a rare station such as a ZD7 when they've already worked him and repeatedly calling just to say hello when they can hear the other desperate ops calling.

And yes I understand that you paid for your radio equipment, and you are free to operate it as you see fit. I feel the same way. But even after the ZD7 said he could only take a few more calls before he had to QRT, I still heard ops saying "nice to work you again". Just a lack of courtesy I think. And by the way, I also paid for my computer equipment and internet connection, so I CAN BITCH WHEREVER THE HELL I CHOOSE. THAT IS MY CHOICE, NOT YOURS!

I hope you have a better day tomorrow.

There are lots of holes in that test though. For one thing, many of
the "reference" antennas are kind of on the strange side. Lets start
with the 40 meter test which means the most of the bands involved. He
uses a 3/8 wave whip elevated at 5 ft off the ground, with two 20 ft
radials. Now, being these radials are not resonant, and they are
elevated, they are next to useless as far as cutting ground losses. So
he's comparing a homemade fairly lame antenna against a storebought
fairly lame antenna. Now, I'm missing his result table for 40m, but he
states a -7.6 db decrease in average reports against the 3/8 wave
antenna. Now being the 3/8 wave at 5 ft with two fairly useless 20 ft
radials is not a barnburner by any means, it's kind of disturbing that
the gap LOST by 7.6 db. Also I have to wonder how he measured the
differences in DB. Step attenuator?, S meter? , etc. He doesn't say. I
have to presume an attenuator being he can specify the loss in DB. So
anyway, for the poor person running the GAP, he would need about 600w
of power amp to equal the ERP of the person running the fairly lame
3/8 wave. From what I can tell, the only band that the GAP didn't get
beat up on was 20m. And it was a tie. All the rest of the bands it
seems to have lost. Against low insufficiently radialed 3/8 wave
verticals. Now, I have no problem with anyone using a GAP if thats
what they want to use, but I'm curious to why you decided this antenna
was for you, when it got beat up on like a lost step child in this
"great actual comparison"? Inquiring minds wanna know... -11 db on
10m??? -7.8 on 15m, etc, etc ??? Good grief...I think they used the
wrong name. They forgot and left the "C" off the front end...I noticed
he didn't include 80m. Does the titan have 80m? Thats the band where
the testing will mean the most. I guess the thought of posting the
-?????? numbers for 80m was too scary to deal with...
Oh well, another day, another two dollars thirty two cents. MK

Were it me, I might try four folded dipoles made of half inch copper pipe.
Using the standard 90 ohm phasing/matching harness and mounting the antennas
as two pair on each side of the tower to get a pretty symetrical pattern.

One thing to remember is that unless the antenna is on top, the pattern
varies greatly with the spacing between the antenna and tower,.

If I had the fiberglass stick, I'd probably make/build a coaxial antenna and
insert it into the fiberglass stick. Use fiberglass supports, or other good
and strong insulating material as supports to keep the antenna from whipping
around if side mounted. The big top mounted commercial ones are massive and
must weigh close to 100#.

I've used the copper pipe, folded dipoles on 2-meters with good results.

A dipole is pointed the right way anywhere you look. This would be an issue if you had directional antennas.

However, great circle bearings have nothing to do with compass readings. Great circle bearings are derived by taking your QTH as the center of the world map, determining 0 degrees as true north and 180 as true south, and then plotting the rest of the world for the ***shortest distance*** to your QTH. The bearing that you get for Bombay, for example, is the angle for the shortest distance between Bombay and your QTH, *not* a compass reading. The exact antipode of your QTH would have a bearing of whatever you wish, because the distance to it is the same anywhere you turn.

If you elevate the feedpoint to at least 15 feet, four radials
will perform just as well or better than a ground mounted
vertical with 120 buried radials. This was the conclusion
of K8CFU who took hundreds of field strength measurements
from both configurations (Radcom, Technical Topics April 89).

Sounds like a guilty conscience crying out here .... ;-)

For the record, this is called the "80 metre effect" here in the UK.
Morning after morning, the same few high power G stations monopolise
the top few kHz of the 80m SSB band and work the same few DX stations
over and over, to the exclusion of everyone else. One imagines they
are just trying to reassure themselves that their metallic penile
extension in their backyards still function.

Fortunately, I am not affected by it all .... I prefer to work CW,
where good manners still prevail. (Well most of the time, anyway!)

Hi Simon,

Congratulations to your licence!

When I came back to ham radio three years ago, I was in a similar situation. I have now tried a couple of verticals and a couple of multiband wire antennas. I first used a (no radials) Cushcraft R5, which performed reasonably well 20-10 m (their R7 and later R8 are similar designs for 40-10) when mounted high and in the clear. Not that well when mounted on the ground.

But the R5 could never beat my 135 ft flat top fed with 450 ohm ladder line and ATU! I have found the latter to be a surprisingly good antenna here, even though ground conditions and surrounding salt water should be good for a vertical.

I then moved to a Butternut HF2V vertical , trapless design for 80/40, using six 33 ft radials and mounted on at 25 ft above the surrounding ground. This antenna works beautfully on 40, where it is almost full size (32 ft hight) and also, surprisingly well, on 17 m!. Performance on 80 m is satisfactory, although the bandwidth is limited. I wholeheartedly recommend this antenna to anyone interested in 40/80 m dx. I now use it as a multiband antenna 80-15m (it gets a bit long for low angle radiation on 12 and 10 m) with an ATU at its bottom and additional radials.

BUT, again, I have recently tried another wire antenna, this time a horizontal loop , first 42 meters long, then 81 meters , fed with 50 ohm coax and with a low SWR on most bands, in need of a tuner on a few of them. This is my current favourite, a surprisingly good antenna not only for Europe but for DX as well. And silent, compared to my verticals, which in a city environment get very noisy, particularly in the summer months.

So, in summing my experience up: verticals are ok, provided you have good ground where you live, mount them high and (preferably) use radials. Good radials take a lot of space! And verticals are expensive and sometimes noisy.

Both the 135 ft ladder line fed flat top and the horizontal loop (called "Loop the Skywire" in the ARRL Handbook/ Antenna Book) are excellent multiband antennas, also for DX, inexpensive, although you need to make a (smaller) investment in a tuner.

I have no experience of the G5RV but from what I hear and read,a flattop with ladder line normally performs better.

Good luck!

If so, then how best to orient an antenna ? I do experience differences
between the strength and numbers I work off the broadside vs. the tips. Goes
without saying. Granted it's not a beam, but there ought to be a better way than
just saying, "that-a-way". Some errect fixed antennas that are a bit directional
(something I'm considering) just to work a particular area they need. A beam
and rotator is just not an option for me so I must do the best with what I have.

If by true north you mean as opposed to mag. north, than how are these
rotators aligned in the first place ? If a dumb peice of machinery can translate
my backyard into headings than we ought to be able to do it too, right Zoran?
<wink>. It's just gears and wheels, it must use some algorithm or something.
Guess I'm still confused.

For your dipole, first try broadside and go from there. Occasionally,
you'll find propagation will be such that you actually might do better
slightly off set. If you want to work mostly E-W, set the antenna so
the points go N-S

I do experience differences
> between the strength and numbers I work off the broadside vs. the tips. Goes

> rotators aligned in the first place ?

Most are set up by setting the rotator pointing North and then moving
them a few more degrees to take into account the declination. Here in
Ny-NJ, it's 12 degrees east. Once done the antenna is mounting facing
North per a compass. Frankly, the width that most of these beams have
makes this a practice in compass reading as the 12 degrees don;t really
make much of a difference.

If a dumb piece of machinery can translate
> my backyard into headings than we ought to be able to do it too, right Zoran?

nope.

> <wink>. It's just gears and wheels, it must use some algorithm or something.
> Guess I'm still confused.

Almost every ops manual included with a rotator has this procedure
included with the set-up. All you need to know is your declination from
true north vs magnetic north and adjust the rotator before set-up.

Hit a sore spot did I?

Good. I hope that you got the point.

As the OT said to the "Beady-Eyed QRP'er":

DX Is!

If you can't figger that out, you need a new hobby.

>I still heard ops saying "nice to work you again". Just a lack of
courtesy I think.

So, if I understand you, we should never work someone more than once?

What if the ZD7 enjoys talking to people he has worked before?
What if the ZD7 would not even hear you in the mobile?
The whole world should stand by while you try in vain to work
DX with your peanut whistle?

Good on you if you're pissed off, frankly, that was my intent,
just as your message was to provoke comment, otherwise
why post?

> And by the way, I also paid for my computer equipment and internet
> connection, so I CAN BITCH WHEREVER THE HELL I CHOOSE. THAT IS MY CHOICE,

Thanks for the shout... so to speak, and I'm having a great day, thanks for
asking.
Keep up the payments on that internet connection, but don't forget to
put a bit aside for a real radio, OK?

DX Is!

Well Simon, it would depend on which contests you are interested in.
If you are interested in the 80m contests run by the RSGB which rely
on local contacts, a vertical would always be a poor choice. In any
case, there is no such thing as a free lunch and all ground-mounted
verticals need radials to work effectively (contrary to what others
have claimed here). You might consider replacing your G5RV with a
doublet, this will tend to outperform the G5RV.

To do better in contests with a simple antenna system, I would suggest
that you need to concentrate on just one band. Basically, you are most
unlikely to do very well in any contest with such a simple antenna
system unless the other contestants are using similar systems. That
should not stop you having lots of fun however and you can certainly
improve your operating skills.

For more advice on contesting, I would suggest that you join the UK
contest reflector at QTH.Net.

Hi Walt,

Who's guilty?

Sorry if I'm not getting your point...

My point to the VE3 is simply this:

Success in DX'in is just like everything else, it relates
to the individuals preparation, both in equipment
and training.

It has nothing to do with dick size, although, I
will admit that some of the brethren are sorely
afflicted in that department.

As you know, there is no level playing field in
the DX game, and never will be no matter how
much whining there is. This is a rough and tumble
game with no quarter given. If the game is too
rough, then the player should select something
less strenuous, like chess.

I have been beaten out in many pile-ups and
have also been successful in many pile-ups.

So what? I don't come whining here, to the
DX fraternity every time some big station
or better operator beats me out for the juicy
DX station.

Instead, I try again until I succeed. If that
means that I need to spend time or money
becoming better prepared, OK!

If working DX is that important, I'd better make sure that I'm ready. That's the point.

Personally, I've become a little tired of folks complaining on the Internet that so-and-so beat me because:

1. He runs a kilowatt.
2. He has better antennas
3. He has better operating skills.
4. He has more money.
5. He has more time.
6. Is a DX hog.

That fellow who's complaining will always complain and expect the whole world to respect him because:

1. He has no kilowatt.
2. He has no antenna
3. He has no operating skills.

Etcetera, etcetera ad nauseum.

Life's not fair! Neither is DX'in!

If I've missed you point, and I probably have, please elucidate, OK?

73 to you Walt, looking forward to continuing the discussion, that is unless there is a juicy DX station on!

Gary WG7X

Mark:

I'm glad you took the time to read the article. After I read it, I emailed Mike Banz with some questions since I am an investment consultant and by no means an antenna engineer. He makes no "bones" about the compromise. In fact, below is a large portion of the text of his return email.

"I believe that the Titan is a reasonable compromise for a multiband vertical antenna where NO ground radials are possible, and no-tune performance on multiple bands is required. From my tests you have observed that it's performance on 20 meters is equal to that of a monobander. On 15 and 40 meters it is slightly compromised. On 10 meters it is poor, and on 80 meters useless.

If you want to work 10 meters, you would want to supplement the Titan with a small home brew monobander. However, putting myself in your shoes, i.e. if I wanted to work 10, 15, and 20 meters, but nothing higher, I would probably erect three simple free standing monobanders with elevated counterpoises. These would out perform ANY commercial antenna, and could probably be constructed for under $75 total. The biggest issue might be that they would be much less visible than the Titan. I had my Titan next to monobanders for 40, 15, and 10 meters, and it stuck out like a sore thumb, whereas the simple monobanders are so thin as to be practically invisible."

Before I left the hobby back in the '80s I had a small beam, then after moving here with CC&Rs, I had to use what I could by "hiding" dipoles that didn't work, and finally by taking a chance with a ground mounted 4-BTV. After returning to the hobby years later, and living in the same location, I knew that only a vertical with no radials was possible. That was a bunch of money, so after all the research I could find, I spent it on the GAP. I found no other reasonably thought out work about any other vertical antenna, and the consensus of the news groups was to move to where I could have an antenna farm. I was willing to do so, but nobody wanted to pitch in and help me afford the move.

For all the compromises, at least I am on the bands again, and can ragchew when I want, and in six months of working, have worked 182 countries on five bands with 100 watts. I guess the key here is that even with CC&Rs, very small space, and all the compromises, I am back on the air, and again enjoying the hobby.

Thanks again for the comments.

Yikes. I just went up there to see what the fuss was about.

W9WI will no longer respond to eQSLs.

I have to click on and load each QSO to see the date & time? Or upload
60,000 QSOs over a modem? Not gonna happen.

I suppose the alternative is to simply assume every submitted eQSL request
is correct, and verify it without checking against one's log. Being too
honest for my own good, I won't do that either.

So if you want a W9WI QSL, you'll have to send it the old-fashioned way...

Hi Mark,

Well, for one, the difference between the oft repeated claim that Gap
>use intentional resistance to get a better match
and the equally, repeatedly expressed
>composed of a lot of thin coax
do not amount to the same thing.

For two, I have (as would many) far more coax going to the antenna than is found within it (which is not "thin" in any sense and not coax either, but then there is the eye of the beholder and such). I can imagine some may want to argue how lossy coax may be, but even at VHF less than 10 feet makes for a poor example and a poorer argument, and VHF is not even in the mix.

For three, you do justifiably point out that if compared to a simpler antenna that outperforms it, that this constitutes loss. Not Ohmic, unless some better data is provided in the place of repeated assertions that are untested. There is a far simpler explanation, a larger radiator, in relation to wavelength, tends to develop lobes of radiation that serve no useful purpose. Hence the complaint observed in another sidethread of poor 10M performance (which does not occur with my Gap).

For four, I have the Gap Eagle. It is not generally discussed here as most interested parties are trying to get onto 80M. I will allow that the low bands of any Gap design are inadequate to the task, but they still offer a match as promised AND if we were to strip away all the gee-gaws and match the traditional way, it would still be a poor performer on those same bands. Hence, if one is limited in choices, then the availability of a more suitable match is a boon (not something that worries me however).

For five, I have followed the modest requirement of elevating the Gap as specified. There is no issue of radials, aside from those elements serving their purpose to some degree and I have compared to many stock designs to find that sometimes they are better and sometimes the Gap is better. At times the only explanation I would offer would be the angle of launch or arrival - this is entirely speculative, but supported by ad-hoc observations and using propagation modelers to distinguish the operational differences.

For six. It has withstood some good windstorms unguyed. It always plays (if better on some bands than others). I have never had to service it, but I have inspected it on occasion and found nothing out of place (except for one cracked bead at the choke, wind damage of the cable slapping against the tube - as this was at the inspection level, a simple tape job resolved that easily).

Would I buy another? I didn't buy the first one, it was a gift of my buddy when he moved up to a tower and Log Periodic. However, to answer the question honestly; no, I wouldn't buy one. A simple pole driven through a tuner does the job too (better/poorer/indifferently).

SPECIAL EVENT STATIONS ZS350JVR AND ZS350JVR/P

On Saturday, 6 April 2002, it will be exactly 350 years since
Jan van Riebeeck stepped ashore in the Cape of Good Hope. His task
was to start a half-way station to provide victuals to passing ships
en route to the far East.

The Boland Amateur Radio Club, together with the Oakdale Amateur Radio
Club, will be operating a special Event Station ZS350JVR from the
Oakdale club house, on 6 April 2002, 00h01 SAST till 23h59 SAST to
commemorate this historic occasion. (22h01 UTC - 21h59 UTC)

Simultaneously, ZS350JVR/P will be operating as a portable station from
Riebeek Kasteel, approximately 100 km North of Cape Town.

The operating frequencies in khz are as follows :

BAND	ZS350JVR	ZS350JVR/P
80	3682	3650
40	7082	7050
20	14282	14150
15	21282	14250
10	28482	28450

QSL Information :

Send QSL direct to P.O. Box 273, STRAND, 7139, Republic of South Africa.
Please enclose self addressed stamped envelope, or addressed envelope
plus green stamp or IRC in the case of DX stations.

Believe it or not, I enjoy receiving packets from the bureau. They count for something, they often contain interesting information about the other operator or his hometown.

And a paper QSL can be verified instantly with one click in my logging software. Toss on a sticker & put it in the box for the outgoing bureau - fast & painless.

>> I suppose the alternative is to simply assume every submitted eQSL request

>WAAAAAAAAAAAAAAAAAAAAAAAAAAAAA!

Well, if the community would rather I automatically verify all QSL requests whether the QSO actually happened or not, I guess I can oblige...

==========

I have no desire to collect electronic QSLs. I was responding to them as a courtesy to those who do. And would have been happy to continue to do so as long as it was practical. Unfortunately, it is no longer practical.

Excellent stuff, thanks. Interestingly, several people have pointed out
that a doublet may work as well.

I think I'll have a go at making one - thanks for the info. By the way,
your callsign looks very familiar - perhaps we've worked in a contest
already!

Thanks for your response (and thanks to everyone else, keep 'em coming!)

Richard, I'm mainly interested in the large(r) contests - mainly CQWW and CQ WPX. I like these ones because they either have a 'rookie' category or a 'single element' category or similar!

From the replies I've been receiving, I've learned that verticals tend to work reasonably well on the lower bands, for DX contacts (although they're less reliable than a dipole for making inter-continental contacts).

I think I may have a go at making a doublet or perhaps even an inverted V, as long as I can get permission from parents. :)

Luckily, my dad is a ham (although now inactive, mainly because I've pinched most of his equipment!) - he's licenced as G4CVS, so I think getting permission shouldn't be too tricky.

By the way, the garden is about 40 - 45ft in length, so it's not too bad. But on the other hands, it's quite short too :)

73, thanks for the nice replies folks.

Simple,

Why else would they engage in dicksize wars?

Admittedly that is an assumption on my part,
based solely upon observation of their antics
on the bands.

Some of those boys just ain't right!

Well at any rate, I did receive a nice E-mail from
Max, and We have agreed to disagree...

This will be the last post from me on this subject!

Thats the bottom line. If you are making qso's, it's better than
nothing.
Again, I have no problem with anyone using one of these. I guess my
gripe is their theory of no radial operation, etc. They shoot
themselves in their own feet by stating that over and over again. If
everyone ran radials with the gaps, they would probably have less
complaints. I guess my main point is, if you are "really" serious
about a high performance vertical, there are better routes to go.
Mostly homebrew. Of course, most high performance vertical systems
don't do multi-band very well. The butternuts are "probably" about the
best as far as a multiband antenna, but they make no bones about
radials being required for good operation. MK

Time for a sanity check. Simon's original post was asking for better
contest antennas not hiding antennas or dealing with CC&R's. The GAP
antennas are a lousy choice - contesters joke about them.

Simon, there have been many opinions on this subject but not many from
serious contesters who continually strive to improve their stations/signal.
Here are a few ideas and resources for improving your contest antennas.

First, take the time to study what other contesters use for antennas. They
have spent a lot of time and effort making their stations as competitive as
possible. There is a World HF Contest Station Database that lists station
descriptions at:

http://www.pvrc.org/WCSD/WCSDsearch.htm

several other big contest and DX stations are featured at:

www.qsl.net/dj7ik/bigguns.htm

Some of these stations have HUGE amounts of antenna hardware as well as
a carefully selected location for best HF performance. I'm not trying to
discourage you, but it is important to understand that contesting with a
G5RV or vertical will get frustrating when competing against stations with
stacked Yagis on tall towers running full power. On the bright side, most

top ranking contest operators started off with small stations and simple antennas when they were younger. They made the most out of their smaller setups by learning and practicing good operating skills, learning about propagation, etc. This hard-earned experience really pays off later when joining multi-op teams or when they can afford their own house/station (with much bigger antennas).

If you look through the station descriptions, you will notice verticals (and related antennas) are preferred on 160m, somewhat on 80m and somewhat less on 40m. Antennas for 20m, 15m and 10m, are dominated by horizontal types (mostly Yagis) at least 1/2 wavelength high with 1 wavelength generally being better.

As someone has previously suggested, check out:

http://www.cebik.com/radio.html

W4RNL's site contains a great amount of information on several types of antennas you might consider.

Simple wire dipoles and loops are fair performers but contesters prefer antennas with more gain (Yagis, quads, phased arrays, etc.). Higher gain antennas are usually considered much more costly, but you can build gain antennas at reasonable cost using wire, rope and a few trees or other supports (hopefully aimed in a prefered direction). Other options might include two element Yagis or Moxon rectangles for the 10m or 15m band - they are relatively small and can be homebrewed at relatively small expense.

Try talking to other contesters and DXers in your area. They might know of an old tribander not being used (or a bigger station to operate). When I was 17, a local offered a 3 element tribander at a low price which was quickly placed on a 6 meter high pole and rotated using rope tied to one end of the boom. It really boosted the contest scores!

Here are some of the antennas I would be investigating in your situation - I would try to erect multiple antennas even if they are simple dipoles:

160m: inverted-L
80m: inverted-L (DX) inverted-vee/dipole (local)
40m: wire vertical/inverted-L (DX) inverted-vee/dipole (local)
20m: tribander (used), wire Yagi or dipole
15m: tribander (used) or homebrew 2 element Yagi/Moxon rectangle
10m: tribander (used) or homebrew 2 element Yagi/Moxon rectangle

The MFJ-1792 or Butternut HF-2V are decent 40/80m verticals if you intend to buy. The verticals will require several ground radials for best performance (unless you can elevate the bases a good amount).

Also, for lots of contest information look at http://www.contesting.com

There is information about several mailing lists at this site. I'd suggest the cq-contest, TowerTalk, WWYC (more info below), and 3830 lists for contest and antenna related discussions. There are many

contesters on these mailing lists that would be willing to offer their advice. You can look through the archives at http://lists.contesting.com/ or search the list archives from main page at http://www.contesting.com

Finally, I recommend checking into the World Wide Young Contesters (WWYC) if you haven't already. Their web site is http://wwyc.webbg.com (I get an error running Netscape, but it is OK using IE).

Good luck & 73,

Steve

The antenna you seem to be describing appears to be a dipole with an
included angle of ~90 degrees, which isn't the sane animal as a
vertical monopole working against ground or its equivalent.

<big snip of interesting posting about antennas>

>Thanks for the opportunity for the debate.....

Thanks also for an interesting discussion - it seems that the more one finds out about antennas, the more one realises how much more there is to know!

But you have to start somewhere, and I hope that the original poster, and any other newcomers, have been given some pointers to a fascinating subject, and also some pointers to antenna basics that might spare considerable dissatisfaction with an expensive commercial antenna.

I like your idea of plotting the positions of objects that could affect the radiation pattern on a great-circle map. For a horizontal antenna the same could be done bearing in mind the predicted major lobes, minor lobes, and (perhaps more importantly) where the nulls could be expected - and then trying to confirm this with actual (targetted) contacts.

Your contest advice, is, I suspect, hard-earned and a highly relevant!

Yeah right. You have 6,000-7,000 meaningful QSO's a year that result
in 3,000-4,000 QSL's jammed full of interesting information about the
other operator. Sure, okay. (Wink! Grin! Snicker!)

> And a paper QSL can be verified instantly with one click in my logging
> software.

No it can't, you have to pick it up, turn to the correct side and wade
through all that interesting information about the op and his
hometown.

> Toss on a sticker & put it in the box for the outgoing bureau -
> fast & painless

WHAT!!!!!! No warm and interesting story about yourself and your home
town? Just paste a sticker and stick it in the box? Sounds almost as
cold and electronic as E-QSL. Sheesh!

It's good that you finally showed up to "save the day"... This tread could
have gotten off the subject, and certainly no other threads do....

If you were interested in answering his question instead of looking for
someone to bitch at, you could have answered earlier or even answered him
directly.

Just in case you don't know how to do that, you would first highlight his
original message, then select, "reply to sender". But since you wanted to
be sure that we could see all your knowledge, you were right to select
"reply to group".

If you paid attention you would have noticed that he did ask for comments
about the GAP.

I've never stripped one apart. I could see the thin coax having a good
bit of loss on the higher bands, but you would think it wouldn't
amount to much on 80/40 meters. I wonder how long this "supposed" coax
section is? And how thin?

Sure, even the butternut has this problem to a degree on 10m. "3/4
wave". But they did design them to use only a 1/4 section on 15m to
get around this problem a bit. But my comparions apply mainly to the
low bands. 80/40, etc.
To my way of thinking, if two antennas are appx the same height in WL
for a certain band, and both have equal radial screens under them, and
one loses out in a comparion test, how can the loss be anything other
than ohmic? Both antennas are short for the low frequencies.
>

I could see that happening if the antennas were slightly different
heights, but again on the low bands, I would think the launch angles
would be about the same.

Well, I guess thats good. But I can say the same thing about all the
antennas I make also. I used a homebrew self supporting 32 ft
vertical. I made it thin and flexible. There were times with strong
winds that the radiator was blowing sideways, but it always propped
back up straight when the storm blew through.
I still have the antenna, but haven't use it in a while. I took it
down because I was paranoid of lightning hits to a 68 ft tall vertical
lightning rod.. That was during a summer of daily lightning storms.
>
A simple pole
> driven through a tuner does the job too (better/poorer/indifferently).

Agreed. But I think using full size mono band verticals the best route
for anyone that wants to get serious about a vertical. For 40-10 use
for someone that can't use radials at all, there is no doubt in my
mind a R-7 or similar antenna elevated about 10-20 feet will smoke
anything else out there with no radials unless it's a full 1/4 wave
over real good ground. I've seen it happen over and over. I've also
used them at field days quite a few times. They are actually pretty
decent antennas and don't have near the TOA problems on the high bands
that a multibander acting as a 3/4 will. When I was running the full
size GP on 40m, another guy here in town used an R-7 at about that
height."15-20 ft" He did quite well for what he had to VK land. He
was a tad down from the full size antenna, but not a whole lot. He
outdid some of the stateside guys running lower dipoles, etc. I do
have to say we were both running a KW...But then again, we were both
loud in the desired target of VK land. Gotta do what you have to
do...I was usually over S9 in VK land with a KW. Didn't want them to
have to strain their ears..:/ On the higher bands, I almost always use
full size 1/2 waves or 5/8's GP's if I use a vertical at all. My 40gp
doubled as a 5/8 on 17m. Depends on the band...I prefer a high dipole
on 20m, but I prefer a good 5/8 GP on 10m. Better local coverage. MK

> .ARRL things they can bully people into joining.

That's called cutting off your nose to spite the face. If everyone reasoned like you, in a few years we'd all be wondering what the hell happened to our bands and how did we lose it all. You don't have to agree with everything the ARRL does, but it is the sole protector of our interests against the well organized tech lobby in the industry, as well as against the pressures from the rest of the world. Not supporting your national organization means actively working against your own interest.

Well, OK. The horizontal dipole is not very directional antenna, unless it is almost one lambda over good ground, and even then only for some wave incident angles. In practice, you would not notice too much of a "gain".

According to whatever the great circle bearing tells you and to the paths open at a given moment. Take a look at some of the GCB plotting program links on the AC6V page and once you plot out the results for your QTH, things will be much clearer.

Even if you had a beam, rotating it is not an exact science, and it pretty much boils down to that-a-way. After all, 3-4 element Yagis have a horizontal 3dB width of over 60 degrees, so there... Pointing it to the GCB as it shows you on the map is the rule of the thumb and there are few exceptions.

> If by true north you mean as opposed to mag. north, than how are these

> Guess I'm still confused.

Sorry, I never should have introduced yet another variable into the already elaborate (for no reason) discussion. Forget the magnetic and true North unless you live way up

North somewhere *and* you have 8 element Yagis. It makes no difference at all.

Take a look at http://xplanet.sourceforge.net and then download
http://www.qsl.net/df5jt/screenshot-huge.jpg

This shows my actual desktop which is updated every 10 minutes in realtime.
It shows the paths from my QTH to various locations in the world and never
fails to amaze me in its illustration, because it shows the misconception of
representing a three-dimensional body onto a two-dimensional image.

It's easy to modify the data to fit your needs, i.e. have your own location
as the starting point for various paths.

http://www.qsl.net/df5jt/earth is a file that contains the 335 DXCC prefixes
with their respective location and http://www.qsl.net/df5jt/beamdir contains
a selection of 20 or so locations with my QTH as the starting point for
showing the paths. Both are plain text files and can easily be modified to
suit your needs.

Warning: The huge screenshot _is_ huge. Filesize is roughly 1.8 MB. Its
dimensions are 1920x1440 in order to match my desktop resolution. I have
also added a small window which magnifies parts of the image by the factor
of two (parts of the Caribbean).

Enjoy!

Actually, I've had a lucky shot with the slingshot I use to put up my
antennas. It looks like the feedpoint at least could be minimum 75 feet
(almost 23 meters.) straight up. 20M up no problem without twisting,etc.
So this is a lucky opportunity I want to make the most of.

As a Sloper I can orient most any direction. To be horizontal I am much
more limited on anchor points. And antenna would then "vee" down to maybe
40-50 ft. at tips. (But still ok.) I agree with you 12 deg. or such doesn't
matter so much when you've got horizontal beam width of 38 or 56 deg., etc.

My problem (and my hopes) are to expand my coverage, Zoran. As I plot
my recent QSO's they mostly fall into giant swath from Eastern EU down to
Carrib. Asia in particular is non-existent ! Yet I see them being spotted on the
Clusters. My master plan is to use a another lower dipole I already have to work
the EU stations which are "easy" for me and to hope this new dipole will reach
into Asia/Pacific okay.

Sorry for long reply; it occured to me I should have been more direct
about what I wanted to do.

Since I don't have the software to plot GCB on my PC I will have to
guess. I want to orient my new dipole to either work East AF down thru say
Taiwan or JA down to Madagascar. (I hope this is reasonably close to the proper
paths).

It is elementary logic, Charles. Here are the facts:

1. You are a ham radio operator in the US, I am a ham radio operator in the US, and there are thousands of others like us.
2. No one is going to give us anything on a sliver platter just because we are here.
3. In order to protect our interests, we need a strong national organization that can compete with the *paid* lobbyists from the industry.
4. There is but one national organization and no other in the country.
5. That national organization needs money for doing regular business, as well as for crucial stuff like the defense of our spectrum and such.
6. If no one joined the ARRL and similar groups worldwide, we would cease to have any representation of our interests and privileges.
7. If this happened, ham radio would soon be relegated to a few hundred kHz of spectrum that nobody wants, say around 29MHz - the rest would be auctioned off.
8. There would be no QSL buro, no PRB-1, not much of anything really.

I always claimed that people would benefit much more by having elementary logic taught to them instead of religion, for example. Now, here's a challenge: can you show that one of the claims above is not correct? Or do you, like some other people, think that our bands, towers and antennas are protected by the Constitution?

As a perfect example of what ham radio would become without national organizations united on the world level, take a look at CB. I don't know about you, but I'd rather shoot myself than be relegated to the CB status.

For those who might be considering this, let me second the motion.
I'm a proud member of the 3905CCN , #2394. I joined the net to earn a WAS
80M only ,Phone only. (A real test for my homebrew antennas at the time and
I'm no Big-Gun either). Time from joining to all 50 states confirmed, cards in
hand was 156 days of casual ops. (2 or 3 nites a week). DX, other than Canada,
is rare on these nets. But if it's WAS you're after and don't mind Nets you
can't do better. Just my two cents worth,

Andrew / KG4JBM

Hello Andrew,

Thanks for your comments.
We have some work to do on getting more DX Stations other then Canada,
but we are trying. If we don't tell people about the net, they won't
know to check-in..

73's,
Keith, WD5BJQ

Agreed. A problem for most Nets. Partially perhaps because DX can set
their own sked and don't need the Nets to generate a pile-up.

OTOH, I've found that there is no really comprehensive listing of Nets
that is really up-to-date and infomative. What they need is a sort of Ohio-Penn
DX/Nets Newsletter type of document to generate interest. Try to get the Big DX
Newlterr to wrap this info into their Newletters and ARRL and QRZ.com as well.
Others also. Biggest problem is why should a DX wait 45 min. for *their* turn?

29 MHz is just great. He asked if you would be happy if you had to give up everything except 29 MHz. Well? All the hams on one band? Like it? Huh? Real useful. The spectrum goes to those who can best defend the territory.

He is located in the Krasnoyarsk Oblast in Central Siberia. You can
tell the Oblast by the letter after the numeral in Russian callsigns
with 3-letter suffixes. All RU0A**, RA0A**, UA0A**, RX0A** calls are
in or near Krasnoyarsk. (The same rule applies to *most* Russian
calls with 1 or 2 letter suffixes, but there are some exceptions.)

Amateur Radio Newsline™ Report 1286 - April 5 2002

Amateur Radio Newsline report number 1286 with a release date of Friday, April 5th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australian radio regulators say no to I-LINK and the NCVEC says its time to revamp Element 2. These stories are first on Amateur Radio Newsline report number 1286 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL: I-LINK NOT LEGAL IN AUSTRALIA

One of the very popular internet based linking protocols appears to be illegal to use in Australia. This as the Australian Communications Authority issues a finding against I-Link. Q-News Graham Kemp, VK4BB, has the background:

--
There are two competing systems being used in ham radio to link repeaters over the Internet. One is called I-LINK and the other is I-R-L-P.

I-R-L-P stands for the Internet Radio Linking Project. It was developed in Canada by Dave Cameron, VE7LTD. It's aim is to link ham radio systems separated by long distance over the Internet without the use of expensive eased lines or satellites. I-R-L-P uses Voice-Over-IP software to link radio sites around the world. But I-R-L-P uses its own custom interface board and software suite running on a Linux platform. And that's why many hams have opted for an alternative called I-LINK.

I-LINK does everything that I-R-L-P does in linking repeaters, but it does not require a computer running Linux or any proprietary hardware interface. The needed software is available to anyone. It runs on a P-C and anyone can have it in their computer. Even non-hams. And that is what seems to be bothering our regulatory body, the A-C-A. It says that the widespread and open availability of I-LINK could make it possible for non hams to get on the air.

Over the past few weeks, much comment has been made regarding the legality or otherwise of I-LINK here in Australia. To clarify the A-C-A position, let me quote in part from a letter by John Martin the Federal Technical Advisory Chairman.

"There should be no issue with I-LINK because the A-C-A has made it clear that it must be impossible for anyone to gain access to an amateur transmitter by any means other than on-air working one of the stations that is connected to the link. The only system which can comply with this is I-R-L-P."

This action by our A-C-A appears to not sitting well with I-LINK proponents in other nations. Some fear the decision here in V-K could bring similar action by other communications regulators in their parts of the world.

VK's National Society, the Wireless Institute of Australia's President Ernest Hocking VK1LK along with WIA/ACA Liaison team member Gilbert Hughes VK1GH met with the ACA Thursday 28 March to discuss the current situation.

--
Hocking: “In order to address this situation the ACA have agreed to develop an information paper in conjunction with the WIA ACA liaison team. This paper will aim to make clear the criteria under which Internet linking can take place. The paper will not endorse specific software or systems. Rather it will provide clear guidance on the conditions that need to be met for the operation of such linked systems to remain legal within the the Radio Communications Act.”
--

It was agreed that every effort would be made to develop the paperwithin a period of 4 - 6 weeks. WIA President VK1LK has called on the Ham population of VK to "ask for your patience over the next few weeks whilst this document is being developed".

From Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Articles describing I-LINK recently appeared in both CQ and QST Magazines. No matter. Basically the Australian Communications Authority has said IRLP is O-K but I-Link has to go. At least for now. (Q-News)

**

RADIO REGULATIONS: FCC PROPOSES TO STRENGTHEN RULES AGAINST REPETITIVE APPLICATIONS

The FCC has proposed changing its application rules for all wireless radio services--including the Amateur Radio Service--in an effort to expand the scope of its current ban on repetitious applications. Newsline’s Bruce Tennant, K6PZW, has more:

--
The ARRL Letter reports that an FCC Notice of Proposed Rule Making released March 20th seeks to modify section 1.937 of its rules. This, to prohibit the filing of all applications that are substantially similar to applications the agency denied or dismissed with prejudice within the previous 12 months.

The term “with prejudice” means a legal issue or court case that is dismissed for good reason and the plaintiff is barred from bringing another action on the same claim. And, if the FCC gets its way, WT Docket No. 02-87 will bring a rules change that might prohibit a handful of applications filed by new and renewing hams where a similar or identical application was denied in the past 12 months.

The FCC cites the pending license request by Herbert L. Schoenbohm, ex-KV4FZ, as an example of a repetitious application. Schoenbohm's amateur license renewal was finally denied in 2000, when the US Supreme Court refused to hear the case. His authority to operate as a radio amateur expired in January 2001.

Then, last April, Schoenbohm applied for a new Amateur Radio license and passed the General exam. The FCC has designated that application for hearing, to determine, in part, if Schoenbohm deserves to be a Commission licensee.

The FCC says that such cases consume significant resources to re-litigate. Especially since they involve identical issues and the same applicants very close in time.

What about routine issues like dismissed vanity applications? The FCC says that they would not be impacted in any way. For vanity license applications, the FCC now allows these applicants to correct the mistakes and file again. The FCC says that it will continue to do so if the proposed rule change is adopted.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW
--

Comments on WT Docket No. 02-87, are due 30 days from the publication of the proposed rule in the Federal Register. Reply comments will be due 45 days after publication. (ARRL)

**

HAM RADIO TESTING: NEW ELEMENT 2 DRAFT EXAMINATION RELEASED FOR COMMENT

The proposed draft syllabus for the new Element 2 Amateur Radio examination has been released for public comment. As we go to air, Scotty Neustadter, W4WW, who chairs the NCVEC Question Pool Committee says that this draft syllabus will be posted to the ARRL's web page within a few days.

Neustadter adds the period for public comment will close on May 9th. He asks that you send your comments to all the members of the Question Pool Committee of the NCVEC. Their e-mail addresses are:

Scotty Neustadter, Chair w4ww@arrl.net
Bart Jahnke, Member vec@arrl.org
Fred Maia, Member fmaia@texas.net
John Johnston, Member Johnston.John1@worldnet.att.net)
(NCVEC, W4WW)

HAMVENTION 2002 - THE CHAIRMAN SPEAKS OUT

The Dayton Hamvention is now just a bit more than a month away and its General Chairman, Jim Graver, KB8PSO, is speaking out. Actually he has been talking to RAIN Producer and 2002 Radio Amateur of the Year Hap Holly, KC9RP. One of the things he made public was who will be speaking at the Hamvention's grand awards banquet:

--
Graver: "It will be William Cross from the FCC and Paul Reid from FEMA, and they will be talking about emergency communications and preparedness in respect to Amateur Radio."
--

Want yo hear more? Well Holly has prepared an extended interviewww with Jim Graver. Part 1 is on line right now at www.rainreport.com. If you don't happen to have internet access, try calling 847-827-7246. (RAIN)

**

CONSUMER ALERT: TELEPHONE AREA CODE 809 IS COSTLY

If you get an e-mail, voicemail or page telling you to call a phone number with an 809 area code, beware. The CGC Communicator reports that chances are, it's a scam and your phone bill will be
astronomical. The FCC has already issued a public warning about calling this area code. Its on the web at www.fcc.gov/cib/consumerfacts/809.html (CGC Communicator, FCC)

**

COMMUNICATIONS BUSINESS: AOL REPORTEDLY COURTING LINUX

Linux users listen up. Your favorite operating system may finally be getting a shot at becoming a real competitor to Microsoft Windows as rumors surface that AOL Time Warner Inc. is negotiating to buy the Linux distributor Red Hat Inc.

The Washington Post reported in late January that such talks were underway. The deal could bolster AOL Time Warner against rival Microsoft as both companies design strategies for moving their services beyond the personal computer to mobile devices and such nascent services as interactive television. (Publised reports)

**

HAMFESTS: ST. JOHN LUTHERAN SCHOOL HAMFEST

Turning to the hamfest scene. The St. John Lutheran School Hamfest and Electronics Show is slated for Saturday, April 13th from 8 a.m. to 1 p.m. Location is in Garfield Heights Ohio. Garfield Heights is 10 minutes South East of Cleveland with the school at 11333 Granger Road. Admission is only one dollar. For more information please write by e-mail to ln4js@visn.net. (via E-Mail)

**

NAMES IN THE NEWS: KE4IQB NAME WITHDRAWN FOR DEPUTY NASA ADMINISTRATOR

NASA says the White House has withdrawn the nomination of Marine Corps Major General and former astronaut Charles F. Bolden, KE4IQB, to be the space agency's next Deputy Administrator. Bolden is currently Commanding General of the 3rd Marine Aircraft Wing, based in San Diego. According to the CQ website, the NASA announcement did not say why Bolden's nomination was withdrawn, but suggested that the Defense Department objected to losing him from an active military command during the war on terrorism. There was no immediate word on who would be named to the number two post at NASA instead of Bolden. (CQ)

**

NAMES IN THE NEWS: KB2GSD TO PITCH FOR FREE AIRTIME

Walter Cronkite, KB2GSD, will be the pitch man for a new campaign taking on broadcasters for not offering enough affordable or free airtime to federal candidates. This, even though the airwaves are owned by the American public.

The coalition sponsoring the Cronkite narrative said that its kicking off its grass-roots drive following passage of the landmark campaign finance reform legislation. This legislation spared broadcasters from having to offer deep discounts to federal candidates.

Under current federal law, broadcasters are required to give discounts to political candidates. However the actual rate can vary depending upon the time it is slated to air. (Publisged reports)

**

NAMES IN THE NEWS: W6TIA RETIRES FROM KFWB

Richard Rudman, W6TIA, the Chief Engineer of KFWB - AM in Los Angeles California is retiring following a truly illustrious thirty year career at the all-news station. Rudman, who is the National Chair of Congressional Emergency Alert System Advisory Committee is perhaps better known for his roles with the establishment and evolution of the E-A-S nationwide.

During Rudman's tenure heading up the engineering helm of KFWB, the region has been regularly challanged by major brush fires, power failures, earthquakes, riots, and more. Throughout all of this Rudman has kept KFWB on the air. A truly enviable record and one that W6TIA can be proud of.

And less we forget, W6TIA has agreeed to be a part of this years Newsline sponsored Ham Radio Town Meeting at the 2002 Dayton Hamvention. His topic will be the Emergency Alert System and introducing it to Amateur Radio. (CGC Communicator, ARNewsline(tm))

**

BREAK 2

**

EMERGING TECHNOLOGY: SMART FENCES

Smart fences are possible. So say Pennsylvania State College researchers who are using acoustic technology to turn a simple chain-link fence into an intrusion detection system.

To make the system work, a single strand of galvanized steel wire, a system of springs and weights and some inexpensive ground sensors make the fence sensitive to intruders. Among parties interested in the technology are the U.S. military, airports and oil companies. (PSC News Release)

**

SPACE AND SCIENCE: REPLACEMENT TDRS IN TROUBLE

A NASA communications satellite launched into orbit on March 8th has developed a problem with its onboard supply of propellant. The trouble is delaying the Tracking and Data Relay Satellite-I from reaching its ultimate destination, a circular orbit about 22,300 miles above Earth's equator. The satellite's current egg-shaped orbit is 22,236 miles at its ap[ogee and about 4,970 miles at its perigee. The spacecraft's manufacturer, Boeing Satellite Systems, is hopeful that its engineers will ultimately be able to deliver the satellite into its proper orbit. If it can’t, the satellite could be declared a total loss. (Published news reports)

**

INTERNATIONAL - HOLLAND: NEW LATIN AMERICAN RADIO STATIONS CD

Dutch shortwave enthusiast Max van Arnhem has produced an audio Compact Disc featuring 371 wave files of Latin American and Caribbean radio stations. According to Media Network, most are off-air recordings as received in his home in The Netherlands, but there are also some recordings made on one of the five trips he made to Central America and the Caribbean between 1979 and 2001. You can find a review of the CD, and details of how to buy it at www.rnw.nl/realradio/booklist/html/lacd.html. (Media Network)

**

DX

In D-X, the Ducie Island DXpedition is being called a major success. The ifirst ever D-Xpedition to the newest DXCC entity came to an end March 26. The VP6DI team was on the air for just over nine days and loged over 39,000 contacts. VP6DI HF QSLs go via VE3HO, and 6-meter QSLs go to JA1BK.

And some good news for DXCC chasers. This as the ARRL announces that it will accept SSB contacts with P-5 slash 4L4FN in the Democratic Peoples Republic of Korea for DXCC credit. The operator of the station is Ed Giorgadze of the Republic of Georgia. He has been active from the capital city of Pyongyang since last November. Valid contacts from the beginning his P-5 operation last fall may be submitted for credit, effective immediately. (ARRL)

**

A NEWSLINE FOLLOW-UP: THE POLITICS OF 11 METERS - PART 2: “A NATIONAL RESOURCE CALLED REACT”

Last week we told you that there has only been one truly successful organization with any political ties to 11 meters. In Part 2 of his special report on the not so political side of 11 meter Class D CB, Amateur Radio Newsline’s David Black, KB4KCH, takes a look at REACT.

--

A long known name in CB radio is REACT, or Radio Emergency Associated Communications Teams. REACT's mission statement stresses public safety communications, assisting individuals, groups and government agencies.

The stated goal: To save lives, prevent injuries and give assistance wherever and whenever needed. The group promotes establishing a monitoring network of trained volunteer citizen-based communicators and using all means available to deliver their message. REACT, it seems, has succeeded on both counts.

The idea of using CB radio in an organized way for emergency communications was born in a mid-winter Chicago snowstorm. It happened after CB radio was used to summon assistance for a young family with a very sick child whose car was stuck on an expressway. That was in the winter of 1962 when CB was really still in its infancy.

Not long after, the groups founder, Henry B. "Pete" Kreer, convinced the Hallicrafters Company to sponsor the REACT program. The initial requirements for a Team was for three members who agreed to monitor 11 meters several hours a day for emergencies. There were no dues or other requirements except to comply with federal and state regulations.

By 1964, it was determined that there was a need for a National CB Emergency Channel. REACT National Headquarters asked all of its 800 teams to monitor channel 9 as a voluntary emergency channel. The scheme worked so well that in 1967, REACT led a movement to convince the FCC to designate channel 9 as the CB emergency channel. It was a major political success and many CB hobbyists began to look at REACT as a possible voice in Washington. But that was not to be.

In 1969, General Motors Research Labs assumed sponsorship of REACT. Also in 1969, Jerrold Reese -- a name that would become synonymous with the growth of REACT became its Managing Director. Founder Henry Kreer remained on with the title of Executive Director.

It was on April 24, 1973, that REACT and to a lesser degree 11 meter C-B probably got its greatest public exposure. That’s when NBC's Today Show televised an interview with Gerald Reese and Henry Kreer. Their interview dealing with the REACT program was aired on some 220 affiliated stations. It lead to over 500 inquiries.

In 1975, REACT broke from GM and started as an independent organization. Not long after, REACT International received not-for-profit status in the state of Illinois followed by federal tax exempt status.

REACT was on its own and less than a year later, it was represented at the first White House Conference on CB radio. And in the ensuing years it won many awards for promoting highway safety through its radio monitoring efforts.

But nothing last forever and the late 1970's brought declining use of 11 meter Class D CB. As the 80’a approached there were far more CB sets sitting on closet shelves than on the air. The C-B craze was dying and with it fewer people in the REACT program.

By the middle 1980’s REACT the only major organization with any ties at all to 11 meters. REACT had survived the CB shakeout probably because never claimed to be a savior or rallying point for 11 meter hobby operators. It’s self appointed task was assistance to the public. REACT was now national and chapterized and tax exempt. It also had broadened its horizons to include other bands and began using operators from other services including ham radio. C-B was now only a part of the REACT model.

In retrospect, one might say that REACT fought very hard for setting up an emergency communications monitoring system on 11 meters, but it was not a lobbiest for the rights of the 11 meter hobby radio operator. Instead, it always has lived to its mission statement and that’s probablly why it has survived and prospered for the last 40 years.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

To learn more about REACT International or to find out if there is an active REACT team in your area, please write to REACT International, Inc. 5210 Auth Road, #403, Suitland, Maryland 20746. You can also go to their website at www.reactintl.org.

Meantine, one question remains: Will anyone ever be successful in totally organizing political potential of 11 meter C-B? That part of the story, next week. (ARNewsline(tm))

Same thing with me, SAE and $2 and I got his card back fairly quick actual.
With a US stamp and US return address.
He does QSL
He might just be sending out several cards in one envelope and asking those hams if they would re-send them out to other US hams. I have done that several times.
I would try again if I were you.

Yea really, I can't keep track of what cost what to what country. And I did call the USPS four times and got 3 answers.
Their web page probably has it accurate. If it is 60c to Canada then I will just put two 34c stamps on my envelope, or get it metered.
Inside put in your SAE, your QSL and at least $1, maybe $2 US.

Source record: 13731

A curious thing happened with the receipt of this QSL.

I live on a postal rural route with a "cluster" mailbox down the road. Yesterday I found a notice in my box that the PO had tried to deliver a registered letter (they hadn't) and it had been returned to the PO for my pickup.

I called the station and asked whether it was indeed back there before driving into town to pick it up. They searched and finally replied in the affirmative so I asked whom it was from. The guy said he couldn't tell me because the writing was in a foreign language and he didn't have a clue.

Since my wife was running errands in town, I asked her to pick it up. Was I surprised when it turned out to be the self-addressed envelope I had sent out with the return address written in English on the envelope. No sign of a foreign language (or a stamp for that matter).

So I'm guessing there was some kind of cover label that was the "registration" part. I've sent registered mail out before but never have I received a QSL back via registered mail. Anyone else have this happen?

1508. O'Gormans in the UK

Newsgroup: rec.radio.amateur.dx
Date: 2002-04-10 19:51:51 UTC
From: Philip Bonner <plpb@earthlink.net>
Message-ID: <rJ0t8.5488$3P4.475802@newsread2.prod.itd.earthlink.net>
Source record: 13734

First, allow me to thank everyone for their DX'ing knowledge which I have been tapping by means of Google newsgroup searches.

Based on the content of your message traffic I recently purchased the Sony ICF-SW7600GR and the Sony AN-LP1 active loop antenna.

I had to wait about a month on back order status at J&R for the reciever for which I payed $179.00, including AC adaptor and ground UPS shipping.

Rather than wait indefinitely on back order for the AN-LP1, I decided to pay the extra $15-20 and buy one from O'Gormans who had them in stock.

On April 4, 2002, I placed my order for the AN-LP1 at www.ogormans.com and payed $110.00, including int'l Air Mail from the UK to California.

Prices from U.S. suppliers who have the AN-LP1 on indefinite back order were about $90-$94, including shipping.

On April 9, 2002, (less than five days after placing my order), the Mail-lady delivered the AN-LP1 to my door.

I believe good service deserves good recognition.

Therefore, I am posting a message about this very satisfying web shopping experience at O'Gormans.

The Royal Mail and U.S. Postal Services also deserve special mentiuon for their excellent service!

Phil

This (see below) is probably what was the cause of the note from your ISP. I had something similar happen to me. Some do gooder sent an e-mail to my provider reporting that I was in violation of selling on this news group and said that it is against policy. My ISP contacted me and gave me the guys name and e-mail. I asked about the policy and no one was able to give me a up-to-date policy. One person did tell me he was one of the original person who helped start up this news group. He knew what I was doing and did not see any problem with it. He also said it was not going against the policies. So I then asked this person to send me a copy. I have yet to hear from him.

Did you ever find out what exactly you are accused of doing and by who? After all this is America and we do have that right, don't we?

It is getting worse and worse everyday. These PacketCluster terrorists will not stop. I would encourage authentication! Most of it seems to be coming from Italy, but let me assure you it is everywhere. Stop the terrorists now while we can. I would urge everyone to lobby their packet cluster node sysop, packet cluster software developer and anyone else that can help fight this abuse. Forget the optional switch. Make it mandatory! No call, password, etc. no signon!

Bernie, W3UR

I worked J6R in the CQWW contest back in October. The Flying Horse CD says the QSL manager is K3LP, and gives his address in Mount Airy, MD.

Well, my card through K3LP came back from the USPS yesterday as undeliverable, forwarding address expired.

So - does anyone know? Is K3LP still the manager? If yes, where is he? If no, who is?

Thanks in advance,

-larry

1519. Laser-printed QSL

Newsgroup: rec.radio.amateur.dx
Date: 2002-04-12 17:46:04 UTC
From: Robert Lyons <boblyons@umich.edu>
Message-ID: <3CB71D5C.DE62B450@umich.edu>
Source record: 13745

Yesterday, I received a "QSL card" laser-printed on a full-size 8"x11" sheet of paper. No no handwriting or verification stamp, not really in 'card' format - just a small graphic plus some laser-printed text giving the QSO info. Kinda looks like something I could have printed up on my own, if I had a mind to spoof the card counters.

On the other hand, this isn't much different than the laser-printed stick-on labels attached to generic cards.

Anyone have a guess as to whether card counters would accept this?

Bob, KI8AB

1530. Need QSL Route for OE75RI

Newsgroup: rec.radio.amateur.dx
Date: 2002-04-14 03:33:37 UTC
From: Larry Johnson <larryj@teleport.com>
Message-ID: <3CB8EFAF.75F27BD7@teleport.com>
Source record: 13506

I'm looking for the QSL route info for OE75RI. I've been able to find other OE75
prefix stations in various QSL Manager lists (this QSO was back in December, 2001), but they don't correspond to an OE and any particular number in a home call.

1531. Win a Complete Amateur Radio Station?

Newsgroup: rec.radio.amateur.dx
Date: 2002-04-14 05:16:50 UTC
From: Herb Rosenberg <kg6ok@pacbell.net>
Message-ID: <3CB910C1.771EF34E@pacbell.net>

How would you like to win a Complete Amateur Radio Station?

Interested? Well, if you come to the International DX Convention in Visalia, CA on Friday - Sunday, April 26-28, 2002, and you buy enough raffle tickets, and you are very very lucky.....

You could walk out with all of this..... (a complete custom dream station, and more.....)

For a HF radio,
How about an ICOM 706MKII, Alinco DX77, Kenwood TS2000, and Yaesu FT1000MP Mark V HF transceivers?

For HF Antennas,
How about a Force 12 XR5 Beam, M2 KT36XA Beam, Cushcraft AW3S, Fulid Motion SteppIR Dipole, World Radio ZX20 Beam, and Butternut HV2 Vertical?

For Cabling,
How about 125 feet of National Wire & Cable premium rotor and coaxial cables?

For a Tower,
How about a US Tower TX-455 (yes, the whole tower)

For a microphone,
How about a Heil Goldline Microphone & and Heil Proset Head Set and a Limited Edition Astatic D-104 Collector's microphone?

For a Key,
How about a Bencher BY-1 Keyer and a Idiom Press LogiKey Iambic Keyer

For Station Accessories,
How about a AOR Multi terminal PSK, RTTY, decoder, Daiwa Watt Meters, a HAL DPX38 RTTY Demodulator, ClearSpeech speakers, DXer Dream Clocks, and Coffee Mugs?

Oh, yeah, and don't forget about,
AEA HF Antenna Analyser, Astron RS35m power supplies, W2IHY 8 Band Audio Equalizer, SGC Stealth Antenna System, and a complete Polyphaser Grounding System?

And of course, for all of these radios and antennas, you will need,
Top Ten Devices, International Radio Filters, and Array Solutions antenna switches,

For your Neighbors,
How about some low pass filters, phone filters, and ear muffs?

For your YL and / or XYL, you will have to have,
Wild Women Pins and collectibles

For Miscellaneous Stuff, that no shack is complete without,
How about a few thousand pre-printed deluxe QSL cards, Collector item ARRL Operating Manual, Collector Item ARRL Antenna Book, and a wide assortment of other books, cd's, and publications?

For Callbooks,
How about your choice of CDROM Callbooks from Buckmaster and Radio Amateur Callbooks?

For Logging and Contesting,
How about logging and contest software from DX4WIN, Writelog, NA, EQF Software, LOGic 5, MiLog, and others?

For HF Mobile Operating,
How about mobile antenna products from HI-Q Antennas, K6MB, W6AAQ, KJ7U, and others?

How about deep deep discount certificates on the purchase of ACOM, ALPHA, and Henry Radio Amplifiers & Tri-ex towers?

For your Reading Pleasure,
How about a life time subscription to World Radio Magazine, and 1 year subscriptions to CQ Magazine, Popular Communications, DX Magazine, QRZ DX, Daily DX, Weekly DX, Low Band Monitor, RTY Journal, and the K1BV Awards Directories?

For VHF / UHF,
How about some VHF / UHF / FRS handheld radios?

For Gift Certificates,
How about gift certificates to Amateur Electronic Supply - Las Vegas, The Wireman, Idiom Press, Peter Dahl Co, and Elecraft?

Interested? Well, come to the International DX Convention, and you may just walk out with all of this stuff, and more.

For details, check our web site at:

http://www.qsl.net/visalia2002/

Another thing to try with the DP-GH62 is to put wooden dowels thru-out to
beef it up, this will help quite a bit with strong winds

What COAX is the best for use on 160 meters through 70cm?
Belden 9913 or
LMR 400?
It will be an outside run of <100 feet not buried.

For lowest loss use the cable which has the largest overall diameter.

For durability use the cable whose jacket has been designed for outdoors
rain and sunshine and temperature variations.

But when all is said and done, the controlling factor may very well be the
SWR you run it at at the the highest frequency of interest.

Remember that a 1dB difference or change will not result in any noticeable
difference either by you or by the fellow at the other end.

Reg, G4FGQ

Swap / Exchange / Sell :

Trio TS520s with Matching DG-5 Digital Frequency Counter,
Perfect working order, good RX, Narrow CW filter and full O/P
on all bands.

Yaesu FL101 Transmitter, FR101s Receiver with Narrow CW filter with
matching Speaker.

Drake SW-4A Short Wave Receiver, mint condition fully working on all
bands, great little receiver.

SGC SG235 500w Auto ATU, NEW used twice only, comes with original manuals
and packing.

All equipment comes with manuals, is in full working order and good
condition.
Pictures can be seen at the URL below.

Open to "sensible" Offers ... OR will Swap / Exchange for the following :

Mint condition Yaesu FT840, preferably with narrow CW filter (500hz/250hz),
original mic, manual and box if possible.

Kenwood TS570DGE preferably with narrow CW filter (500hz/250hz),
original mic, manual and box if possible.

Please reply direct if interested.

I use 9913 here for RX only. All I can say it don't try to move it. When
I actually build out my "shack" properly I'll most likely run 9913 to a
wall mounted block of some sort and use RG-58 or 8X from the block to
the rig.

As the frequency goes up, the run of coaxial cable represents a longer and longer distance in terms of wavelengths. It is entirely possible to get extremely misleading swr readings at high frequencies as a result.

For example, a run of lossy coax can show a nearly 1:1 swr reading, EVEN IF THE OPPOSITE END IS COMPLETELY OPEN! That is, lossy coax makes an excellent dummy load at VHF.

So I'd say exactly the opposite: Transmitter end swr readings are much more reliable at low frequencies than at high frequencies. If you want to know about your coax at VHF, you may want to actually try open circuiting it at the antenna and measuring the SWR at low power. There are published methods for figuring out the coaxial losses from such a measurement, but the rule of thumb is that the lower the swr, the worse is your coax.

My own experience as a VHF DXer indicates that most solid dielectric coaxial cables will deteriorate with age, and that you will need to replace the cable after several years of exposure to the weather. Fail to do that, and you will merely be warming the coax with your transmitter power.

I can still recall the time that I let some RG-8/U polyfoam coax get a little too weathered and a winter ice storm broke open the connection to my 2M yagis at the gamma match. The swr only went up to 1.6:1, and I spent some time warming the coax before I even realized that the connection to the antennas had been broken. And that was only 144 MHz. Higer frequencies get even touchier.

What's this attack about? No, wait, I am sure I don't want to know.

In would suggest start your own newsgroup where you can post as many attacks as you want. Maybe you might want to post some reasons for your attacks as well, lest we think you are also an "all-around f*ckwit" for attacking people unnecessarily.

I used 9913, too. It's good stuff but don't put it where it'll get stepped on or run over or twisted around a lot. Keep bends on a wide radius.

Also, be aware that with 100 feet you will have losses, especially at UHF. I put an 80-foot piece of brand-new 9913 on a 2-meter antenna once. Before I put it up, I put a Bird wattmeter on the transmitter and read 100 watts output. Put it at the other end of the cable and read 50 watts. You can imagine what it might have been at UHF. I seriously doubt LMR400 would do better.

The only better choice is hardline and the expense of cable and connectors is prohibitive for most hams.

Hi, Michael...

I bought a roll of 500 feet of the 9913 flex. The insulation around the center wire is some kind of foam but "solid" not like the "bead" of insulation that coils around the center conductor in 9913 itself. Also, when I was separating the shield and center wire to connect it, I bent the center wire on maybe a 2" radius and the insulation "snapped" in two. I was distressed to see this happen. Had I known, I would have gone for the "real" 9913 instead.

It seems to work great but there *are* some handling issues!! "Flex" as applied to this cable may lead to some erroneous assumptions.

The key phrases here may be "signed by addressee" and "handwritten note".
In the absence of any handwritten info or signature, and in the absence
of any manually applied confirmation stamp, most people who answered my
original query think that laser-printed card will not be accepted at ARRL.

Thanks for the discussion, all.

Ed,
I find it easier to work with. It's lighter. There are length
measurements right on the jacket. 9913 has a problem with water
intrusion, due to its air dielectric. I've heard of folks getting
water in the shack, even with a good, watertight connection outside.
Theory is temperature swings allows condensation of water vapor inside
the cable, over time.
Barry

3 db seems rather high for an 80 foot run, but I don't know what brand of 9913 you used, or the quality of the connector installation. I use the 9913 type flexible stuff from Cable Xperts on all my antennas and it has performed very well over the past 5 years that it has been up.

Standard practice for me is to make up and test my feedlines before I put the antenna up, and I have tested many runs of this cable. A 100 foot run with quality connectors typically measures around 1.7 db at 144 mhz.

However, remember that even with 3 db loss in the feedline (regardless of frequency), if you are feeding an antenna with any reasonable gain, this loss is overcome. For example, a 100 watt input into a feedline with 3 db loss feeding an antenna with 10 db gain (with a SWR at the rig of 1.5 to 1) will still have a net gain of about 6.4 db and provide around 440 watts ERP. (The numbers get even better if the match is measured at the antenna rather than the rig, due to the feedline loss affecting the SWR measurement)

Considering the high costs of hard line and associated connectors (or the cost of a 400 watt amplifier), a gain antenna, a good SWR, and 9913 or LMR 400 feedline is a pretty cost effective trade-off... :>)

Most people who said that are probably wrong........

After having sent thousands of QSL's back to people with computer
printed labels, and knowing others who have done the same, I have
never received, nor heard of anyone else receiving a QSL back or
a complaint about it not being accepted for DXCC.

The use of a small rubber stamp on the edge of the label or a
signature makes things more 'valid' maybe, but I've seen plenty
of QSL cards with computer generated labels and no signature or
stamp.......

When you discuss QSL cards and acceptance of the card by the
DXCC people, you have to keep one thing in mind. What is 'acceptable'
changes as the rarity of the enity being checked increases. What might
not be acceptable on an HM card would be casually ignored on a JA,
DL, or W card........

In other words, the 'rules' don't apply equally even though the clicks
do. JA = 1 click. DL = 1 click. W = 1 click. HM = 1 click. But don't
hold your breath waiting to see a JA, DL, or W card get rejected.

Agreed. Remember that no matter what card you submit for approval, most likely, it's not the first one from that entity that the checker has seen. If it "looks" like the rest that he has seen, and doesn't look doctored in any way, most likely it will be approved.

I don't know about Barry, but the low loss of the LMR-400 was what sold me.
On 20 meters the attenuation is only 0.466 dB/100 feet.

If you had a loss of 3 db at 150 mhz then something is wrong for 9913.
Using about 90 watts I have measured slightly less than 3 db at 432 mhz
for 100 feet. This was with 2 differant pieces of coax, one terminated
with pl259 connectors and the other with N type connectos. I did have
to use some adaptors but forgot what kind or how many. The losses of
the connectors were not taken away so the loss of the coax would really
be less than measured. I used a Bird meter and a Struthers (sp)
military wattmeter to double check the results.

Are you sure that was 9913 or was it just some other rg-8 size you were
using ? The run of the mill rg-8 will loose about 3 db at 150 mhz and
about 6 db at 450 mhz.

Or you could use the "good stuff" (RG6) with loss <5db/100ft! :)

I put up 9913 maybe about 5-8 years ago for my 2 Meter beam. When it was new, I measured 2 dB loss after I had all the connectors on it before I installed it (90') and I haven't noticed that it has deteriorated, but I was very meticulous about installing the connectors and how I installed them (going up under a box to the outside relays 1 horiz and 1 vert). I have been happy with it, I am sure if there is water in it, I would have noticed it by now. However if the LMR400 has better specs, go for it.

Mater of fact it will. Not by much, but still 0.4 db at 440 is an advantage
where I'll take any I can get.

> >
> > The only better choice is hardline and the expense of cable and
> connectors

Even then I'd pick the larger LMR cables if purchasing new cable in that
expense range.
LMR 600 ($1.19) is a good UHF cable if the runs are not too long and the
connectors are about a half to a third the cost of 7/8ths Heliax connectors.

However you could go to LMR-900 (bout $4.00 a foot)which is pretty much the
same as heliax in performance...It will make much sharper radius bends
without damage and the connectors are only slightly less than the ones for
the Heliax.

> > is prohibitive for most hams.
> >
What? $85 plus for 7/8ths UHF Heliax connectors is high...<:-)) That was
for just one and I think the price has gone up substantially since I
purchased the last two for the repeater.

Type UHF Male for LMR 600 is $26

Sorry, I missed W6DKN's original question...

It was Belden cable and the connectors were silver-plated. It worked quite well but I was still quite surprised at the losses. Connector installation should have been fine... been doing it for 50 years including about 12 years professionally.

It is linear simply because that is the scale they wish to use. Putting it
on a logarithmic scale is certainly possible.

Of course pay is logarithmic - raises (or cuts) are almost always
expressed as a percentage, rather than in absolute dollars.

Gad, how off-topic can we get!

??? What are you talking about? There's no such thing as a "log. power law" and anything that can be expressed
in numbers can be converted to a logarithm of some kind, including pay. What you call "log. power law" is
nothing but a ratio of two power measurements over the same impedance. Base 10 is used because it is easy to
work with and easy to visualize on scales and graphs, but it could be any other base. Decibels describe
nothing but ratios of two numbers, that is all. They are not a basic unit of measure like Volt, Ohm and such.
The reason they're used in power measurement is because it is easier to work with 60 dB than with expressions
like P1= 100000 P2, i.e. it reduces the enormous linear scale to a readable logarithmic one.

> > Lesson learnt.
>

The guy was right because he wanted to point out that 1 dB is not insignificant when taken personally, and one
should not take 1 dB drops for granted.

I bought some of the 9913F when it first came out about 1995, and likewise was disappointed in the performance vs specifications. From my as-built notes:

3.48 dB/100' @ 440 MHz
2.44 dB/100' @ 144 MHz

For comparison, I had also measured some "special" Teflon double shielded Belden RG8/U (Ethernet cable?) that I picked up surplus for $0.25/foot (wishing I bought more) and found 2.38 dB/100 @ 144 MHz. The odd-ball surplus RG8/U cable is just as good (at 2M) and cost one third of the RG9913F. I recently stripped off the cables from the tower. The 9913F looks ready for a junk heap after 5 years, the surplus teflon stuff looks like new.

At the time, I called Belden concerned that my type N connectors were to blame. Belden wasn't too concerned about the connectors I was using, saying that the cable losses were "typical". In other words, don't get too impressed by the catalog spec.

I am afraid you will discover real 9913 isn't any more flexible. About
1 meter radius is about all it is good for. What you have lost track
of is one of the reasons it has such low losses is that isn't very
flexible. That allows the use of dielectric materials with lower
losses.

The The foam inner dielectric is much lower loss at UHF frequencies
then solid plastic, and the solid core has lower losses then stranded,
and the nice big center conductor has a nice big surface area, which
is where the energy actually travels anyway.

The lowest loss cables aren't flexible at ALL.....

Has anyone had any luck in getting a QSL or does anyone have information on this operation on Marquesas in October 2001?

```
also 9913 is junk if u live in a wet/dry enviroment you will eventually get
water in the line and shorts will happen much better to go with rg213 mil
spec

I, too, was not at all happy with the actual Belden stuff, but the
"improved" 9913F like Cable Xperts sells is a "different animal"
altogether... I have several runs that have been up over 5 years in the
Mohave Desert heat and sun exposure, and they are still in excellent shape.
I also have 3 runs that have been direct buried (no pvc, etc) for about 3
years now, and they still test out fine.

WRONG! Decibels describe the ratio of two _POWERS_.
That the ratio is dimensionless is neither here nor there,
for it is the fundamental definition that _POWERS_
are being compared.

Warning! Do not feed the META_TROLL! Comments
such as the above are likely to institute a childish
tirade from THE GOOD DOCTOR (who recently

You're right on all counts. I guess I didn't make my intent clear. I intended only to say that the 9913Flex is NOT as flexible as one might assume from its name.

Thanks... Ed, W5EJ

A71MA

QSO July, 2001. QSL air-mailed in number 10 security envelope with SASE (size 9) and 2 IRC's to CBA 25 August 2001. QSL received direct 9 October 2001. No problems. I never put any callsigns or USA on outside envelope. Of course the US air-mail stamp is a clue.

Amateur Radio Newsline™ Report 1287 - April 12 2002

(Note: Producer Bill Pasternak, WA6ITF is away on business this week. ARNewsline™ Report 1287 was produced and recorded in New Orleans Louisiana by Don Wilbanks, KC5MFA)

Amateur Radio Newsline report number 1287 with a release date of Friday, April 12th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Another threat to the 2.4 Gigahertz band. This time it comes from the FCC. That story is first on Amateur Radio Newsline report number 1287 coming your way right now.

(Billboard Cart Here)

**

RADIO LEGISLATION: FCC PROCEEDING PUTS NEW PRESSURE ON AMATEUR MICROWAVE BAND

The FCC has again targeted Amateur Radio's primary allocation at 2390 to 2400 MHz for possible sharing or use by other radio services. Newslines Norm Seeley, KI7UP, has the details:

--

According to the ARRL Letter, a Notice of Proposed Rulemaking known as WT Docket 02-55 has been presented by the FCC. The Letter says that it invites comments on either sharing the 2390 to 2400 MHz band with public safety services being displaced from 800 MHz or moving amateurs elsewhere.

The N-P-R-M identifies 2390 to 2400 MHz as an "Unlicensed P-C-S Band." Unlicensed, asynchronous P-C-S devices were authorized there in 1995, but Amateur Radio remains primary.

Why the action now? The FCC says that its receiving an increasing number of reports of incidents of harmful interference to public safety systems in the 800 MHz band. To alleviate the problem, the Commission now is looking into restructuring 800 MHz and moving some occupants elsewhere. And 2390 to 2400 MHz could be where those users get moved.

But says the FCC, that’s only one piece of spectrum being considered. One place its not looking is the adjacent 2385 to 2390 MHz band. The FCC says it can’t consider 2385 to 2390 MHz because that part of the band is slated to be auctioned off.

This is the second threat to the ham radio allocation in less than a year. Just last summer, the FCC invited comments on its proposals to reallocate some

spectrum in the 2390 to 2400 MHz amateur segment for possible use by unspecified mobile and fixed services. The Commission has also proposed 2390 to 2400 MHz and other bands to support the introduction of advanced wireless systems, including so-called third-generation or 3 G mobile systems. The FCC also has asked for comments on whether amateurs could share the band with government users.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

WT Docket 02-55 was released in mid-March but not yet available for public response. The FCC will officially invite comments for 30 days after the NPRM is published in the Federal Register. Reply comments will be due 60 days following publication in the Federal Register. The ARRL says that it plans to file comments in this proceeding. (ARRL)

**

RADIO LAW: FCC MAY MANDATE FASTER CONVERSION TO DTV
